1.0 EXECUTIVE SUMMARY

VHB/STV Joint Venture was retained by the Metropolitan Transportation Authority New York City Transit (MTA-NYCT) to perform a corridor-level Environmental Site Assessment (Corridor Assessment) of the Proposed BRT Corridor Alignment located along the north shore of Staten Island between South Avenue (West Shore Plaza, located near the intersection of South Avenue and Chelsea Road) and St. George (St. George Terminal, located near the intersection of Richmond Terrace and Bay Street) in Richmond County, New York (proposed alignment). VHB/STV Joint Venture's assessment was conducted in connection with MTA-NYCT's planned construction of an exclusive thoroughfare for NYCT buses along the north shore of Staten Island (North Shore Bus Rapid Transit [BRT]) from St. George to West Shore Plaza (Proposed Project).

The Corridor Assessment assesses the implementation of new and enhanced public transit service along the proposed alignment. The approximately 8-mile proposed alignment consists of approximately 4.8 miles of right-of-way (ROW) from the former North Shore Railroad and approximately 3.2 miles of City roadways such as Richmond Terrace (0.5 miles) and South Avenue (2.7 miles). The proposed alignment includes at-grade, elevated viaduct, and below grade open-cut sections, with street-running portions along South Avenue (mixed-traffic) and Richmond Terrace (exclusive two-lane median busway).

This Corridor Assessment evaluates the easternmost portion of the proposed alignment, identified as "Section 1", located along the North Shore of Staten Island between St. George (St. George Terminal, located near the intersection of Richmond Terrace and Bay Street) and Jersey Street (near the intersection of Richmond Terrace and Jersey Street) in Richmond County, New York (the "Proposed Alignment of Section 1") (See *Figure 1*). This Corridor Assessment was prepared in general accordance with the scope and limitations of the ASTM International (ASTM) E 1527-13 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E 1527-13). Limiting conditions and/or deviations from the ASTM E 1527-13 standard are described in Section 2.4 of this report.

The Proposed Alignment of Section 1, located on the North Shore of Staten Island in St. George, extends approximately one-mile along the North Shore of Staten Island and ranges from approximately 75 to 150 feet in width. The Proposed Alignment of Section 1 consists of the following:

- The eastern portion of the Proposed Alignment of Section 1 (between St. George Terminal and Nicholas Street/former North Shore Railroad ROW) consists of Richmond Terrace, which is a two-way/four-lane highway with a median and sidewalks; and,
- The western portion of the Proposed Alignment of Section 1 (between Nicholas Street and Jersey Street) consists of the former North Shore Railroad ROW and includes the Bank Street bike path/service road, North Shore Esplanade, vegetated land, and an asphalt-paved semicircle utilized for parking. In addition, a contractor's storage yard is present on the Proposed Alignment of Section 1 near the intersection of Richmond Terrace and Nicholas Street and piles of stockpiled soil are located in the western portion of the Proposed Alignment of Section 1 between Nicholas Street and St. Peters Place.

The general alignment of the Proposed Alignment of Section 1 is paralleled with the north shore of Staten Island. A Site Location Map is included as *Figure 1*.

Properties neighboring the eastern portion of the Proposed Alignment of Section 1 (Richmond Terrace) include: the St. George Terminal; a commercial shopping mall (Empire Outlets); the Staten Island Yankees

baseball stadium; a multilevel parking garage; a construction site; Staten Island Municipal Buildings; commercial and residential properties, and, the western portion of the Proposed Alignment of Section 1 (described below).

Properties neighboring the western portion of the Proposed Alignment of Section 1 (bike path/service road) include: vegetated land along the shoreline; Richmond Terrace and North Shore Esplanade to the south of the Proposed Alignment of Section 1; two properties with former one-story structures containing abandoned cars and lumber, and an asphalt-paved semicircle utilized for parking to the north of the Proposed Alignment of Section 1; the Atlantic Salt property to the west; commercial and residential properties, and the eastern portion of the Proposed Alignment of Section 1 (described above). A Site Plan is included as *Figure 2*.

Based on a review of the United States Geological Survey (USGS) topographic map, Jersey City/The Narrows quadrangle dated 2014/2013 (*Figure 1*), the eastern portion of the Proposed Alignment of Section 1 is located approximately 400 to 1,000 feet southwest of the upper portion of the New York Bay (Upper Bay), the western portion of the Proposed Alignment of Section 1 is located approximately 30 to 150 feet south of the Upper Bay, the Proposed Alignment of Section 1 elevation is approximately 30 to 40 feet above mean sea level (amsl), and local topography slopes downward to the north/northwest in the western portion of the Proposed Alignment of Section 1 and downward to the northeast in the eastern portion of the Proposed Alignment of Section 1. The topographic downward slope observed at the Proposed Alignment of Section 1 during the Proposed Alignment of Section 1 reconnaissance is consistent with the downward slope that is observed in the USGS topographic maps. Generally, groundwater contour lines mimic the surface topography and groundwater flow direction is perpendicular to these contour lines flowing from higher to lower elevation. Based on local topography, the direction of shallow groundwater flow is north/northwest in the westernmost portion of the Proposed Alignment of Section 1, and northeast in the easternmost portion of the Proposed Alignment of Section 1, towards the Upper Bay; however, a subsurface investigation would be required to determine actual groundwater flow direction. The depth to groundwater is reported as approximately 8 to 10 feet below ground surface (bgs) in the general vicinity of the Proposed Alignment of Section 1 (Mott MacDonald, 2017).

Based on the review of available literature (Soren, 1988), the subsurface geology of the Proposed Alignment of Section 1 likely includes the following formations: Upper Pleistocene deposits, Raritan Formation, and bedrock. The surficial soils are comprised of till soils (glacial deposits), which consist of a mixture of boulders, gravel, sand, silt, and clay. Based on review of additional documentation provided, these soils were observed in soil borings advanced to terminal depths of approximately 16 to 57 feet below ground surface (bgs) in the vicinity of the Proposed Alignment of Section 1. In addition, uncontrolled fill was observed in soil borings, including sand, gravel, brick, concrete, wood, and glass fragments from ground surface to thicknesses that ranged from 13 to 33 feet bgs (Mott MacDonald, 2017). The bedrock contains several units, including the "Staten Island Serpentine of Merrill" and "Manhattan Schist". Note that serpentine contains high concentrations of magnesium, which facilitates the formation of naturally occurring asbestos (magnesium-iron silicate). Serpentine bedrock was observed in soil borings at depths ranging from 40 to 52 feet bgs (Mott MacDonald, 2017).

As part of this Corridor Assessment, VHB/STV Joint Venture reviewed a preliminary overview of planned construction activities for the Proposed Project to evaluate the extent and nature of contamination of sites that could potentially impact the Proposed Project. Proposed construction activities consist of the following:

- Widen, remove, and/or reconstruct existing roadways and medians for the eastern portion of the Proposed Alignment of Section 1 (Richmond Terrace) including excavation activities throughout this portion to approximately 5 feet below ground surface (bgs), and
- Reconstruct with a 12 inch thick concrete and 12 inch thick subbase, install water retention facilities or drainage to discharge to Kill Van Kull, reconstruct Bank Street roadway/sidewalk, and/or installation of new concrete ramp structure at Nicholas Street for the western portion of the Proposed Alignment of Section 1 including excavation activities throughout this portion to approximately 5 to 15 feet bgs.

The sites with potential contamination were evaluated as follows:

- a) Properties where contamination may exist, but have little or no potential to affect the construction or operation of the Proposed Project; and,
- b) Properties where contamination may exist and have the potential to affect the construction or operation of the Proposed Project.

As a result of this Corridor Assessment, including but not limited to visual observations of the Proposed Alignment of Section 1; review of historical information and environmental databases; the planned construction activities, and, professional judgement, the recognized environmental conditions (RECs), controlled RECs (CRECs), and/or historical RECs (HRECs), as defined by the ASTM E 1527-13 standard, are summarized below. The location of RECs is presented on Figures 3H, 3R, 3S, and 4 and a detailed description of RECs are presented on Tables 1 through 3.

Additionally, a limited evaluation for the presence of contaminated building materials (e.g., asbestos-containing material [ACM], lead-based paint [LBP], and polychlorinated biphenyl [PCB]-containing building materials) has been included in this Corridor Assessment. Environmental concerns are presented on Figure 3S and a description is presented on Table 3.

RECs within the Proposed Alignment of Section 1:

- a) Properties on the Proposed Alignment of Section 1 where contamination may exist and have the potential to affect the construction or operation of the Proposed Project were identified as follows:
 - The western portion of the Proposed Alignment of Section 1 was historically developed with a former railroad and structures that were demolished. Historic fill of unknown origin and suspect buried structures have the potential to impact the environmental integrity of the Proposed Alignment of Section 1 (H011).
 - Several current and historic commercial and manufacturing facilities were identified on the western portion of the Proposed Alignment of Section 1 (H018, H024, H026, and H027). These facilities include: dyeing and cleaning; animal rendering; textiles, and clock manufacturers; and lumber, coal, stone, and feed storage yards. The potential presence of petroleum-related, metal/polycyclic aromatic hydrocarbon (PAH)-related, and/or chlorinated-solvent-related contaminated soil and/or groundwater may exist on the Proposed Alignment of Section 1.
 - During the Proposed Alignment of Section 1 reconnaissance, a drum storage area consisting of three 55-gallon drums was observed on a contractor's storage yard on the central portion of the

Proposed Alignment of Section 1 (S001). The drum storage area was inaccessible due to construction restraints, therefore VHB/STV Joint Venture's ability to inspect these drums was limited and unreported releases and/or mismanagement from the drum storage area has the potential to impact the environmental integrity of the Proposed Alignment of Section 1.

- During the Proposed Alignment of Section 1 reconnaissance, piles of stockpiled soil were observed on the Proposed Alignment of Section 1 along the Richmond Terrace retaining wall in subsections 1D and 1E (S002). The source of this material is unknown and may contain fill material and suspect buried debris that has the potential to impact the environmental integrity of the Proposed Alignment of Section 1.

Environmental Concerns on the Proposed Alignment of Section 1:

During the Proposed Alignment of Section 1 reconnaissance, suspect ACM and PCBs in the form of caulking material (i.e., between concrete joints) was observed in sidewalks throughout the Proposed Alignment of Section 1 along the Richmond Terrace and the bike path/service road and suspect LBP in the form of paint was observed on the Richmond Terrace roadway and bike path/service road throughout the Proposed Alignment of Section 1. In addition, suspect ACM, LBP and PCB-containing materials may be present in the stockpiles of soil observed on the western portion of the Proposed Alignment of Section 1. The potential presence of ACM, LBP, and PCB-containing materials is considered an environmental concern (EC).

RECs Not on the Proposed Alignment of Section 1:

- a) Properties not on the Proposed Alignment where contamination may exist and have the potential to affect the construction or operation of the Proposed Project were identified as follows:
- Several current and historic commercial and manufacturing facilities were identified on properties adjacent to and surrounding the Proposed Alignment of Section 1 since at least 1885 (H001 through H010, H012 through H017, H019 through H023, H025, and H028 through H030). These facilities, which are located throughout the surrounding area, but focused primarily in areas surrounding the westernmost and easternmost portions of the Proposed Alignment of Section 1 include: a former railyard, auto wash and repair, machine and carpentry shops, lumber and paint storage, gasoline filling stations, tire service, dry cleaning/laundry; sign printing; paints and oils sales; carpentry; upholstery; sheet metal works; an electric company and sub-station with transformers; automobile repair and wash shops; gasoline filling stations; lumber, coal, stone, and feed storage yards; and paint, chemical, and several manufacturers. The potential presence of petroleum-related, metal/PAH-related, and/or chlorinated-solvent-related contaminated soil and/or groundwater may have impacted the Proposed Alignment of Section 1.
 - Properties located in close proximity to the Proposed Alignment of Section 1 are listed in the regulatory database report for: spills and a Voluntary Cleanup Program site (R001); spills; petroleum bulk storage; and hazardous waste generation (R002, R003, R004and, R005); and spills including one open spill and petroleum bulk storage (R006). The potential presence of petroleum-related, metal/PAH-related, and/or chlorinated-solvent-related contaminated soil and/or groundwater may have impacted the Proposed Alignment of Section 1.
 - During the Proposed Alignment of Section 1 reconnaissance, a metal-framed structure, housing metal debris (i.e., abandoned car parts), and a concrete structure housing lumber and miscellaneous construction debris, were identified north-adjacent to western portion of the Proposed Alignment

of Section 1 in landscaped land which is suggestive of with potential dumping (S003). The potential dumping and material mismanagement may have impacted the environmental integrity of the Proposed Alignment of Section 1.

Recommendations

Based on the review of preliminary construction plans for the Proposed Project and the identified RECs and environmental concerns at or in close proximity to the proposed construction area, the potential exists to encounter contamination during construction activities. In addition, based on the planned construction activities and anticipated depth to groundwater, dewatering may be required as part of construction.

On-site professionals should be prepared to encounter one or more of the following types of contamination/waste in soil and/or groundwater during construction activities: petroleum-related; metal/PAH-related; and chlorinated-solvent-related. In addition, suspect ACM, LBP, and PCB-containing building materials may be encountered.

All material affected by construction should be identified and properly managed during such activities in accordance with applicable rules and regulations. Additionally, proper precaution (i.e., personal protective equipment) should be taken by all involved parties during construction, in accordance with Occupational Safety and Health Administration (OSHA) Construction Standard 1926.65, Hazardous waste operations and emergency response (OSHA, Safety and Health Regulations for Construction (29 CFR 1926.65). Each party assumes entire responsibility and liability for complying fully in all respects with these regulations.

Groundwater drawn towards the Proposed Alignment of Section 1 during dewatering for construction could be contaminated and may require special treatment and permitting prior to disposal. Soil excavated during construction could be contaminated and may require special treatment and disposal and may not be suitable as backfill. It is recommended that a Soil and Groundwater Materials Management Plan be prepared and implemented during the construction phase.

The passage of time may result in a change in the environmental characteristics at the Proposed Alignment of Section 1. The report does not warrant against future operations or conditions that could affect the recommendations made.

2.0 INTRODUCTION

This report summarizes the results of the corridor-level Environmental Site Assessment (Corridor Assessment) of the Proposed BRT Corridor Alignment located along the north shore of Staten Island between South Avenue (West Shore Plaza, located near the intersection of South Avenue and Chelsea Road) and St. George (St. George Terminal, located near the intersection of Richmond Terrace and Bay Street) in Richmond County, New York (proposed alignment). VHB/STV Joint Venture's assessment was conducted in connection with Metropolitan Transportation Authority New York City Transit's (MTA-NYCT) planned construction of an exclusive thoroughfare for NYCT buses along the north shore of Staten Island (North Shore Bus Rapid Transit [BRT]) from St. George to West Shore Plaza).

The Corridor Assessment assesses the implementation of new and enhanced public transit service along the proposed alignment. The approximately 8-mile proposed alignment consists of approximately 4.8 miles of right-of-way (ROW) from the former North Shore Railroad and approximately 3.2 miles of City roadways such as Richmond Terrace (0.5 miles) and South Avenue (2.7 miles). The proposed alignment includes at-grade, elevated viaduct, and below grade open-cut sections, with street-running portions along South Avenue (mixed-traffic) and Richmond Terrace (exclusive two-lane median busway).

This Corridor Assessment evaluates the easternmost portion of the Corridor, identified as "Section 1", located along the North Shore of Staten Island between St. George (St. George Terminal, located near the intersection of Richmond Terrace and Bay Street) and the intersection of Richmond Terrace and York Avenue in Richmond County, New York (the "Proposed Alignment of Section 1") (See *Figure 1*). This Corridor Assessment was prepared in general accordance with the scope and limitations of the ASTM International (ASTM) E 1527-13 *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM E 1527-13)*. Limiting conditions and/or deviations from the ASTM E 1527-13 standard are described in Section 2.4 of this report.

The Proposed Alignment of Section 1, located on the North Shore of Staten Island in St. George, extends approximately one-mile along the North Shore of Staten Island and ranges from approximately 75 to 150 feet in width. The Proposed Alignment of Section 1 consists of the following:

- The eastern portion of the Proposed Alignment of Section 1 (between St. George Terminal and Nicholas Street/former North Shore Railroad ROW) consists of Richmond Terrace, which is a two-way/four-lane highway with a median and sidewalks; and,
- The western portion of the Proposed Alignment of Section 1 (between Nicholas Street and Jersey Street) consists of the former North Shore Railroad ROW and includes the Bank Street bike path/service road, North Shore Esplanade, vegetated land, and an asphalt-paved semicircle utilized for parking. In addition, a contractor's storage yard is present on the Proposed Alignment of Section 1 near the intersection of Richmond Terrace and Nicholas Street and piles of stockpiled soil are located in the western portion of the Proposed Alignment of Section 1 between Nicholas Street and St. Peters Place.

The general alignment of the Proposed Alignment of Section 1 is paralleled with the north shore of Staten Island. A Site Location Map is included as *Figure 1*.

2.1 Selected Definitions

The following terms are used throughout this report and, for the purpose of clarity, corresponding definitions are provided. These terms are fully defined in ASTM E 1527-13.

Controlled Recognized Environmental Condition (CREC) – A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority) with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Environmental Professional - A person meeting the education, training, and experience requirements as set forth in 40 CFR § 312.10(b), necessary to conduct a site reconnaissance, interviews, and other activities in accordance with this practice, and from the information generated by such activities, having the ability to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property, sufficient to meet the objectives and performance factors in 40 CFR § 312.20(e) and (f).

Historical Recognized Environmental Condition (HREC) - A past release of any hazardous substances or petroleum products that occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

Recognized Environmental Condition (REC) - The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or, (3) under conditions that pose a material threat of a future release to the environment.

2.2 Purpose and Scope

The purpose of this assessment is to identify RECs, CRECs, VECs, and certain other environmental issues or concerns as they existed at the Proposed Alignment of Section 1 at the time of the Proposed Alignment of Section 1 visit. The assessment is intended to identify conditions that would have the potential to impact the value of the Proposed Alignment of Section 1 or the development and use of the Proposed Alignment of Section 1. The assessment was also conducted for purposes of environmental due diligence to qualify for the innocent landowner, a bona fide prospective purchaser, or a contiguous property owner defense under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). VHB/STV Joint Venture's assessment was conducted in connection with the Proposed Project.

The purpose of the Proposed Project is to:

- Provide frequent, efficient, and reliable transit to serve growing demand on the North Shore of Staten Island.
- Facilitate improved connections between Staten Island neighborhoods and existing North and West Shore activity centers, industries, and employment centers.

- Offer a reliable and cost-effective transportation solution that supports adopted City and community-endorsed public policy initiatives, such as the North Shore 20301, pertaining to economic growth and development.
- Maximize transportation use of the former and currently unused North Shore Railroad ROW while minimizing property acquisition and disruption to the community and businesses.
- The Corridor Assessment included, but was not limited to an assessment of the following potential environmental issues: current and historical usage of the Proposed Alignment of Section 1; current and historical usage of adjoining properties; regulatory agency records review; solid waste management and disposal practices on the Proposed Alignment of Section 1; and, hazardous materials and petroleum products management on the Proposed Alignment of Section 1.
- This evaluation was conducted by qualified environmental professionals utilizing a standard of good commercial and customary practice in general accordance with ASTM E 1527-13. The scope of work completed for this evaluation includes the following:
- Documenting the physical characteristics of the Proposed Alignment of Section 1 through a review of available topographic, geologic, and groundwater data, and Proposed Alignment of Section 1 observations.
- Researching the Proposed Alignment of Section 1 history through a review of reasonably ascertainable standard sources such as fire insurance maps, aerial photographs, and available prior reports.
- Documenting current Proposed Alignment of Section 1 conditions, via observations, regarding the presence or absence of hazardous substances/petroleum products; the generation, treatment, storage, or disposal of hazardous, regulated, or medical wastes; the presence of electrical equipment that utilizes oils which potentially contain polychlorinated biphenyl (PCBs) ; the presence of storage tanks (above and below ground); and, drains that discharge to subsurface, former septic tanks, and drywells.
- Determining the usage of adjoining and nearby properties to identify the likelihood for hazardous substances (if present and/or suspected) to migrate onto the Proposed Alignment of Section 1.
- Evaluating information contained within Federal and State environmental databases and other local environmental records, within specific search distances.

2.3 Additions, Deviations, Deletions, Data Failures, and Data Gaps

Environmental issues related to contaminated building materials (e.g., asbestos-containing material [ACM], lead-based paint [LBP], and PCB-containing building materials) are outside the scope of ASTM E 1527-13. A limited evaluation for the presence of contaminated building materials has been included in this Corridor Assessment.

The following deviations, data gaps, and deletions from ASTM E 1527-13 were necessary in conducting this assessment:

- The Proposed Alignment of Section 1 area history was not conducted in five-year intervals. However, sufficient information about the history of the Proposed Alignment of Section 1 and

¹ <https://www.nycedc.com/resource/north-shore-2030>

surrounding area could be obtained from the available historical Sanborn Maps, aerial photographs, city directories, and local records, and this data gap is not likely to alter the conclusions of this report.

- There were no historical use interviews conducted during the performance of this Corridor Assessment.
- A comprehensive search for environmental liens filed against the Proposed Alignment of Section 1 was not performed.
- Portions of the Proposed Alignment of Section 1 were inaccessible (i.e., blocked off with construction barriers, or densely vegetated) during the Proposed Alignment of Section 1 Reconnaissance, which hindered VHB/STV Joint Venture's ability to perform a visual inspection.
- The ASTM User Questionnaire was not provided; therefore, the following information could not be obtained as part of this Corridor Assessment:
 - Valuation reduction for environmental issues;
 - Knowledge or experience of the user;
 - Commonly known or reasonably ascertainable information; or,
 - Presence or likely presence of contamination at the property.

2.4 Limitations and Exceptions

VHB/STV Joint Venture has prepared this Corridor Assessment using reasonable efforts in each phase of its work to identify RECs associated with hazardous substances, wastes, and petroleum products at the Proposed Alignment of Section 1. The methodology of the Corridor Assessment was generally consistent with the ASTM E 1527-13. Findings within this report are based on information collected from observations made on the day of the Proposed Alignment of Section 1 investigation and from reasonably ascertainable information obtained from governing public agencies and private sources.

This report is not definitive and should not be assumed to be a complete or specific definition of the conditions above or below grade. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other construction purposes. VHB/STV Joint Venture makes no representation or warranty that the past or current operations at the Proposed Alignment of Section 1 are, or have been, in compliance with all applicable Federal, State and local laws, regulations and codes.

Regardless of the findings stated in this report, VHB/STV Joint Venture is not responsible for consequences or conditions arising from facts that were concealed, withheld, or not fully disclosed at the time the evaluation was conducted.

This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated.

The regulatory database report provided is based on an evaluation of the data collected and compiled by a contracted data research company. The report focuses on the Proposed Alignment of Section 1 and neighboring properties that could impact the Proposed Alignment of Section 1. Neighboring properties

listed in governmental environmental records are identified within specific search distances. The search distance varies depending upon the particular government record being checked. The regulatory research is designed to meet the requirements of ASTM E 1527-13. The information provided in the regulatory agency database report is assumed to be correct and complete.

2.5 Continued Validity and User Reliance

This report is presumed to be valid, in accordance with, and subject to, the limitations specified in the ASTM E 1527-13 standard, for a period of 180 days from the earliest records utilized to prepare the report, until the Client obtains specific information that may materially alter a finding, opinion, or conclusion in this report, or until the Client is notified by VHB/STV Joint Venture that it has obtained specific information that may materially alter a finding, opinion, or conclusion in this report. Additionally, pursuant to the ASTM E 1527-13 standard, this report is presumed valid if the earliest records relied on to complete the report were obtained less than 180 days prior to the date of the intended transaction.

3.0 DESCRIPTION OF THE PROPOSED ALIGNMENT OF Section 1

The Proposed Alignment of Section 1, located on the north shore of Staten Island in St. George, extends approximately one-mile along the north shore of Staten Island and ranges from approximately 75 to 150 feet in width. The Proposed Alignment of Section 1 consists of the following:

- The eastern portion of the Proposed Alignment of Section 1 (between St. George Terminal and Nicholas Street/former North Shore Railroad ROW) consists of Richmond Terrace, which is a two-way/four-lane highway with a median and sidewalks; and,
- The western portion of the Proposed Alignment of Section 1 (between Nicholas Street and Jersey Street) consists of the former North Shore Railroad ROW and includes the Bank Street bike path/service road, North Shore Esplanade, vegetated land, and an asphalt-paved semicircle utilized for parking. In addition, a contractor's storage yard is present on the Proposed Alignment of Section 1 near the intersection of Richmond Terrace and Nicholas Street and piles of stockpiled soil are located in the western portion of the Proposed Alignment of Section 1 between Nicholas Street and St. Peters Place.

In order to more clearly reference properties/locations indicated on Figures 2 through 4, the following subsection were defined:

- Subsection 1A, located between the eastern perimeter of the St. George terminal and near the intersection of Richmond Terrace and Bay Street;
- Subsection 1B, located between an area near the intersection of Richmond Terrace and Bay Street and 100 feet east of the intersection of Richmond Terrace and Stuyvesant Place;
- Subsection 1C, located between an area east of the intersection of Richmond Terrace and Stuyvesant Place and an area 400 feet east of the intersection of Richmond Terrace and St. Peters Place;
- Subsection 1D, located between an area 400 feet east of the intersection of Richmond Terrace and St. Peters Place and 350 feet west of the intersection of Richmond Terrace and Westervelt Avenue; and,
- Subsection 1E, located between an area 350 feet west of intersection of Richmond Terrace and Westervelt Avenue and the intersection of Richmond Terrace and Jersey Street.

The location of each subsection is identified on *Figures 2 through 4*, photographs of Proposed Alignment of Section 1 and surrounding areas are included in *Appendix A*, and a zoning map is included in *Appendix B*.

3.1 Improvements on the Proposed Alignment of Section 1

Current improvements on the Proposed Alignment of Section 1 are listed in the following table. A Site Plan is included as *Figure 2*.

Site Feature	Description
Buildings (stories)	There are no buildings present on the Proposed Alignment of Section 1.
Construction date(s)	Developed prior to 1885

Site Feature	Description
Exterior areas	Exterior uses of the Proposed Alignment of Section 1 include roadways, a bike path/service road, an inaccessible contractor's storage yard, vegetated open space, recreation lots, parking, and an area utilized for storage of soil stockpiles
Roads/rail lines on the Proposed Alignment of Section 1	The eastern portion of the Proposed Alignment of Section 1, in subsegments 1A through 1C, operates as Richmond Terrace, a 4-lane roadway and, the westernmost portion of the Proposed Alignment of Section 1, in subsegments 1D through 1E, operates as a bike path/service road.
Potable water supply	City of New York
Sewage disposal system(s)	City of New York
Heating/Cooling system fuel source(s)	Not applicable
Back-up fuel source(s)	Not applicable
Electricity supplier(s)	Consolidated Edison Company of New York and National Grid
Storm water system	Drains and catch basins were observed throughout the Proposed Alignment of Section 1 and are expected to be connected to the NYCDEP sewer system.

3.2 Current and Historical Use of the Proposed Alignment of Section 1

3.2.1 Historic Use(s) of the Proposed Alignment of Section 1

Earliest records identify the eastern portion of the Proposed Alignment of Section 1, between St. George Terminal and Nicholas Street, as Richmond Terrace since at least 1885 to present; and, the western portion of the Proposed Alignment of Section 1, from Nicholas Street to Jersey Street, formerly operated as a railway and was occupied by various commercial and manufacturing facilities from approximately 1885 to 1974, when they were demolished. The following facilities were formerly present on the Proposed Alignment of Section 1: dry cleaning; carpentry, and animal rendering; paint, plaster, textiles, and clock manufacturers; and lumber, coal, stone, and feed storage yards. Additionally, the Staten Island Rapid Transit Railway operated on the western portion of the Proposed Alignment of Section 1 from approximately 1885 to 2006. Additional information on historic use of the Proposed Alignment of Section 1 is provided in Section 4.0 of this report.

3.2.2 Current Use(s) of the Proposed Alignment of Section 1

The Proposed Alignment of Section 1, located on the North Shore of Staten Island in St. George, extends approximately one-mile along the North Shore of Staten Island and ranges from approximately 75 to 150 feet in width. The Proposed Alignment of Section 1 consists of the following:

- The eastern portion of the Proposed Alignment of Section 1 (between St. George Terminal and Nicholas Street/former North Shore Railroad ROW) consists of Richmond Terrace, which is a two-way/four-lane highway with a median and sidewalks; and,
- The western portion of the Proposed Alignment of Section 1 (between Nicholas Street and Jersey Street) consists of the former North Shore Railroad ROW and includes the Bank Street bike

path/service road, North Shore Esplanade, vegetated land, and an asphalt-paved semicircle utilized for parking. In addition, a contractor's storage yard is present on the Proposed Alignment of Section 1 near the intersection of Richmond Terrace and Nicholas Street and piles of stockpiled soil are located in the western portion of the Proposed Alignment of Section 1 between Nicholas Street and St. Peters Place.

The general alignment of the Proposed Alignment of Section 1 is paralleled with the north shore of Staten Island. A Site Location Map is included as *Figure 1*.

3.3 Physical Setting

3.3.1 Topography and Hydrogeology

Based on a review of the United States Geological Survey (USGS) topographic map, Jersey City/The Narrows quadrangle dated 2014/2013 (*Figure 1*), the easternmost portion of the Proposed Alignment of Section 1 is located approximately 400 to 1,000 feet southwest of the upper portion of the New York Bay (Upper Bay), the westernmost portion of the Proposed Alignment of Section 1 is located approximately 30 to 150 feet south of the Upper Bay, the Proposed Alignment of Section 1 elevation is approximately 30 to 40 feet above mean sea level (amsl), and local topography slopes downward to the north/northwest in the westernmost portion of the Proposed Alignment of Section 1 and downward to the northeast in the easternmost portion of the Proposed Alignment of Section 1. The topographic downward slope observed at the Proposed Alignment of Section 1 during the Proposed Alignment of Section 1 reconnaissance is consistent with the downward slope that is observed in the USGS topographic maps. Generally, groundwater contour lines mimic the surface topography and groundwater flow direction is perpendicular to these contour lines flowing from higher to lower elevation. Based on local topography, the direction of shallow groundwater flow is north/northwest in the westernmost portion of the Proposed Alignment of Section 1, and northeast in the easternmost portion of the Proposed Alignment of Section 1, towards the Upper Bay; however, a subsurface investigation would be required to determine actual groundwater flow direction. The depth to groundwater in the vicinity of the Proposed Alignment of Section 1 is reported as approximately 8 to 10 feet below ground surface (bgs) in the general vicinity of the Proposed Alignment of Section 1. (Mott MacDonald, 2017).

The Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) for the Proposed Alignment of Section 1 area (Community Panel Number [3604970189]) was reviewed to assess whether the Proposed Alignment of Section 1 is located within a designated flood plain or flood zone. Most of the Proposed Alignment of Section 1 is located in an area identified as Zone X, which is an area determined to be outside the 0.2% annual chance floodplain. Part of the western portion of the Proposed Alignment of Section 1 (between Nicholas Street and Jersey Avenue) is located in Zone AE, which is defined as an area with a 0.2% annual chance flood hazard and 1% annual chance flood with average depth of less than 1-foot or with drainage areas of less than 1-square mile. A copy of the FIRM map for the Proposed Alignment of Section 1 area is included in *Appendix C*.

3.3.2 Geology and Soil Composition

Based on the review of available literature (Soren, 1988), the subsurface geology of the Proposed Alignment of Section 1 likely includes the following formations: Upper Pleistocene deposits, Raritan Formation, and bedrock. The surficial soils are comprised of till soils (glacial deposits), which consist of a mixture of boulders, gravel, sand, silt, and clay. Based on review of additional documentation provided, these soils were observed in soil borings advanced to terminal depths of approximately 16 to 57 feet below ground surface (bgs) in the vicinity of the Proposed Alignment of Section 1. In addition, uncontrolled fill was observed in soil borings, including sand, gravel, brick, concrete, wood, and glass fragments from ground surface to thicknesses that ranged from 13 to 33 feet bgs (Mott MacDonald, 2017). The bedrock contains several units, including the "Staten Island Serpentine of Merrill" and "Manhattan Schist". Note that serpentine contains high concentrations of magnesium, which facilitates the formation of naturally occurring asbestos (magnesium-iron silicate). Serpentine bedrock was observed in soil borings at depths ranging from 40 to 52 feet bgs (Mott MacDonald, 2017).

Additionally, the GeoCheck Physical Setting Source Addendum to the regulatory agency database report supplied by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut was reviewed to obtain information regarding the dominant soil composition in the Proposed Alignment of Section 1 vicinity. The soil in the area of the Proposed Alignment of Section 1 is described as Urban Land. Urban Land refers to soils that have been altered by human activities thus making them unidentifiable. Typically, these soils have been mixed with other materials, such as brick and concrete (urban fill), and characteristics can only be determined by investigation on the Proposed Alignment of Section 1. Other surficial and shallow soil types in the area of the Proposed Alignment of Section 1 consist of sandy loam. Sandy loam refers to a soil that's made of sand, silt, and clay.

4.0 HISTORIC RECORDS REVIEW

Information regarding the Proposed Alignment of Section 1 and vicinity historical uses was obtained from various publicly available and practically reviewable sources including:

- Aerial photographs (scale: 1" = 1000') dated 1924, 1940, 1951, 1954, 1961, 1974, 1984, 1985, 1995, 2006, 2009, 2013, and 2017;
- Fire Insurance Maps (Sanborn Maps) dated 1885, 1898, 1910, 1917, 1922, 1937, 1950, 1962, 1977, 1981, 1983, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 2001, 2002, 2003, 2004, 2005, 2006, and 2007; and,
- Topographic maps dated 1891, 1898, 1900, 1905, 1925, 1947, 1955, 1966, 1967, 1981, 1995, 1998, 2013, and 2014.

Historical research documentation is included in *Appendix D*.

4.1 History of the Proposed Alignment of Section 1

Historical uses of the Proposed Alignment of Section 1 are summarized in the following table:

Property Use	Description of the Proposed Alignment of Section 1 History
East (Subsegments 1A through 1C)	From at least 1885 to present, the eastern half of the Proposed Alignment of Section 1 (subsegments 1A, 1B, and 1C) has been developed as Richmond Terrace, a 4-lane roadway.
West (Subsegments 1C through 1E)	Earliest records identify commercial and industrial facilities, public institutions, and a railway on the western half of the Proposed Alignment of Section 1 (subsegments 1C, 1D, and 1E) by at least 1885. Specific property uses through time are as follows: From at least 1885 to 1977, an approximately 1,200 foot section of the westernmost portion of the Proposed Alignment of Section 1 (subsection 1E) was occupied by commercial properties, public institutions, and miscellaneous manufacturing facilities. Property development included dry cleaning, carpentry, and animal rendering facilities; meat, furniture, home goods, and drug stores; paint, plaster, textiles, and clock manufacturers; and churches. Several industrial storage yards and warehouses associated with these facilities housed materials including fuel oil, coal, lumber, stone, and feed. The majority of the abovementioned facilities were demolished by 1974, however, several manufacturing facilities remain in operation. Additionally, the Staten Island Rapid Transit Railway (subsegments 1C through 1E) was in operation from at least 1885 to 2006, when large portions of the railway were demolished and redeveloped. Following demolition of the railway, a bike path was constructed by at least 2008, which is presently operational.

It does not appear that topographic contours in the Proposed Alignment of Section 1 area have significantly changed or that historic landfilling occurred during the time period reviewed.

Refer to *Figure 3H – Historical Records Review Findings* and *Table 1 – Historical Records Review Findings* for a description of properties located on the Proposed Alignment of Section 1 that were identified in the historic records review and may have the potential to affect the construction or operation of the Proposed Project.

4.2 Neighboring Property History

Historical uses of adjoining properties are summarized in the following table:

Direction	Description of Neighboring Property History
North (Eastern portion of Section 1, subsegments 1A through 1C)	Adjacent properties north of the Proposed Alignment of Section 1 were developed with the "Baltimore Ohio Rail" and "Staten Island Rapid Transit Railway" yards (subsegments 1A through 1C), which included freight depot, carpentry, lumber and coal pier storage facilities, and an electric sub-station with transformers, by at least 1894. Portions of the railway yards (in subsection 1A) were demolished and developed with a bus terminal with an associated automobile repair garage and auto wash facility by 1950, however; some areas of the railway (between subsection 1B) remained in operation until at least 2004. By 2005, The remaining railyard was demolished and developed with the "Staten Island Yankees Baseball Field", several large commercial and/or industrial facilities, and parking lots, which remain presently. Additionally, the St. George Terminal (formerly identified as the "Staten Island Rapid Transit Ferry Co") was developed by 1894 and remains present.
South (Eastern portion of Section 1, subsegments 1A through 1C)	Adjacent properties south of the Proposed Alignment of Section 1 were developed with residential buildings, personal automobile garages, and few commercial facilities, including a bank and hotel, by 1898. Residential development was predominant until approximately 1937, when additional commercial facilities and public institutions were developed. Commercial facilities developed included two gasoline filling stations and a tire repair shop, which were present from at least 1937 to 1977. Additionally, a facility identified for manufacturing was developed by 1983 and remained until at least 2007.
North (Western portion of Section 1, subsegments 1D and 1E)	Adjacent properties north of the Proposed Alignment of Section 1 were developed by at least 1885. Records indicate that the earliest development north of the Proposed Alignment of Section 1 included lumber, coal, stone, and feed storage yards, commercial facilities, including bars and offices, and the "New Brighton Ferry Landing". By 1917, additional commercial facilities were developed, including the "Standard Oil Co", an animal rendering facility, and a paint manufacturing facility. From approximately 1937 to 1974, miscellaneous manufacturing facilities for production of paint, chemical, and plaster materials were in operation. Most of the north-adjacent properties on the west end of Section 1 were demolished by 1974; however, manufacturing occurred in one adjoining facility until at least 2007, and the building remains presently. Currently, the north-adjacent properties are predominantly vacant and have not been redeveloped.
South (Western portion of Section 1, subsegments 1D and 1E)	Adjacent properties south of the Proposed Alignment of Section 1 were developed with public and commercial facilities by at least 1855. Additionally, Richmond Terrace has adjoined an approximately 450 foot portion of the Proposed Alignment of Section 1 (subsection 1E) to the south, followed by public and commercial facilities, since at least 1855. Records indicate that the earliest development south of the Proposed Alignment of Section 1 included public and commercial facilities and few private residential buildings. Commercial properties developed on south-adjacent properties included dry cleaning, sign printing, carpentry, upholstery, sheet metal works, printing, and animal rendering facilities; a post office; a hotel; and hardware, plumbing, meat, ice cream drug, paints and oils, home goods, furniture, and roofing supplies stores. Many of these facilities were demolished by 1950 and several apartment buildings were developed. Some commercial facilities remain post-1950, however, specific property uses are not

Direction	Description of Neighboring Property History
	clearly identified. South-adjacent properties have also been utilized for automobile repair, refueling, and parking from at least 1917 to 2007.

Refer to *Figure 3H – Historical Records Review Findings* and *Table 1 – Historical Records Review Findings* for a description of nearby properties that were identified in the historic records review and may have the potential to affect the construction or operation of the Proposed Project.

4.3 Other Historical Sources

4.3.1 Previous Environmental Reports

VHB/STV Joint Venture was not provided with any prior environmental reports for the Proposed Alignment of Section 1.

4.3.2 Historical Use Interviews

There were no historical use interviews conducted during the performance of this Corridor Assessment.

4.3.3 Other Publicly Available Information

No other publicly available information was reviewed as part of this Corridor Assessment.

5.0 ENVIRONMENTAL RECORD REVIEW

A database search report that identifies properties listed on state and federal databases within the ASTM-required radii of the Proposed Alignment of Section 1 was obtained from EDR and is included in *Appendix E*.

The environmental database report identified 213 listings including the Proposed Alignment of Section 1 and/or adjoining properties. These properties included those that could be mapped and those that could not (i.e., orphan properties). The Proposed Alignment of Section 1 and adjoining properties were listed in the database search report. This information is summarized in the sections below.

5.1 Record Review for the Proposed Alignment of Section 1

The Proposed Alignment of Section 1 is not listed in the regulatory agency database report

5.2 Neighboring Property Record Review

The following factors were evaluated with respect to the potential for contaminant migration to the Proposed Alignment of Section 1 from surrounding properties to determine whether a summary of the regulatory agency database listing should be included in this report:

- Location of the property compared to the Proposed Alignment of Section 1 vis-à-vis groundwater migration based on the local topography and the assumed groundwater depth and shallow groundwater flow direction;
- Location of the property compared to the Proposed Alignment of Section 1 vis-à-vis vapor migration based on readily available information pursuant to the ASTM E 1527-13 standard including soil and geological characteristics; contaminant characteristics; contaminated plume migration data; and significant conduits that might provide preferential pathways for vapor migration such as major utility corridors, sanitary sewers, storm sewers, and significant natural conduits (e.g., Karst terrain);
- Status of listing (e.g., whether the [state environmental agency or applicable regulatory authority] has issued a No Further Action letter [or other similar closure document]);
- Type of database and whether the presence of contamination is known; and
- The distance between the listed property and the Proposed Alignment of Section 1.

Based on this evaluation, the review of additional environmental records has been limited to the properties listed below, since contamination at the other properties identified by the regulatory agency database report is unlikely to migrate to the Proposed Alignment of Section 1 and, therefore, unlikely to impact the environmental integrity of the Proposed Alignment of Section 1.

Refer to *Table 2 – Regulatory Agency Records Review Findings* and *Figure 3R – Regulatory Agency Records Review Findings* for a description of nearby properties listed in the regulatory agency database that may have the potential to affect the construction or operation of the Proposed Project.

5.3 Federal, State, and Local Agencies Contacted

In addition to review of the regulatory agency database report, offices of federal, state, and local regulatory agencies were contacted via submission of freedom of information law (FOIL) requests. Copies of the correspondences are included in *Appendix F*.

The following property: *"The Staten Island/St. George Ferry Terminal, located at 1 Bay Street and 1 Ferry Terminal Viaduct, Staten Island, NY 10301"*, was submitted to the New York State Department of Environmental Conservation (NYSDEC) and New York State Mayor's Office of Environmental Remediation (OER) in the form of a FOIL requests to obtain all available information that may be pertinent to this assessment.

The following table summarizes the FOIL requests submitted and the responses received:

Agency Contacted	Date Information Request Submitted	Information Updated	Description of Response Received
New York State Department of Environmental Conservation (NYSDEC)	October 15, 2019	Unknown	A response has not yet been received from NYSDEC. Following receipt of a response, if the review of the additional information alters the conclusions of this report, an addendum will be submitted.
New York State Mayor's Office of Environmental Remediation (OER)	October 9, 2019	Unknown	A response has not yet been received from OER. Following receipt of a response, if the review of the additional information alters the conclusions of this report, an addendum will be submitted.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

The inspection of the Proposed Alignment of Section 1 included observations of the property and surrounding area that were made to identify potential sources or indications of hazardous substances, including: aboveground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain PCBs; waste storage areas; hazardous materials usage, storage, and disposal; stained surfaces and soils; stressed vegetation; leaks; and, odors. In addition, readily-observable portions of the properties immediately adjacent to the Proposed Alignment of Section 1 were viewed from public rights-of-way to identify or determine the likelihood of any of the aforementioned potential sources of contamination being present.

Portions of the Proposed Alignment of Section 1 were inaccessible during the Proposed Alignment of Section 1 reconnaissance, which hindered VHB/STV Joint Venture's ability to perform a visual inspection. The following limiting conditions were encountered during the Proposed Alignment of Section 1 reconnaissance:

- A contractor's storage yard located in subsection 1C, near the intersection of Richmond Terrace and Nicholas Street was blocked off with construction barriers and inaccessible.

Sufficient information about the Proposed Alignment of Section 1 and surrounding area could be obtained from the inspection of accessible areas, therefore this data gap is not likely to alter the conclusions of the report.

6.2 Site Reconnaissance

Elizabeth Scheuerman of STV performed a visual inspection of the Proposed Alignment of Section 1 and adjacent and surrounding areas on October 21, 2019. The weather during the inspection was sunny and the temperature was approximately 65° F. Photographs taken during the Proposed Alignment of Section 1 reconnaissance are included in *Appendix A*.

6.2.1 Proposed Alignment of Section 1 Observations

The Proposed Alignment of Section 1, located on the North Shore of Staten Island in St. George, extends approximately one-mile along the North Shore of Staten Island and ranges from approximately 75 to 150 feet in width.

Observations made at the Proposed Alignment of Section 1 reconnaissance are described in the following table:

Item	Description
Hazardous material storage or handling areas	None identified
ASTs and associated piping	None identified
USTs and associated piping	None identified

Item	Description
Drums & containers (≥5 gallons)	Three 55-gallon drums were identified on the Proposed Alignment of Section 1 in subsection 1C. The drum storage area was inaccessible due to construction restraints, therefore STV's ability to inspect these drums was limited. Spill containment platforms and drum identification labels were not observed; however, no odors or staining were noted.
Odors	None identified
Pools of liquid, including surface water bodies and sumps (handling hazardous substances or substances likely to be hazardous only)	None identified
PCBs/ Transformers	Pole-mounted transformers were observed throughout the Proposed Alignment of Section 1 along Richmond Terrace and the bike path/service road
Stains or corrosion	None identified
Drains & sumps	None identified
Pits, ponds & lagoons	None identified
Stressed vegetation	None identified
Historic fill or any other fill material	Piles of stockpiled soil covered by blue tarps were observed along the Richmond Terrace retaining wall on the western half of the Proposed Alignment of Section 1, adjacent-south to the bike path/service road.
Wastewater (including storm water or any discharge into a drain, ditch, underground injection system, or stream on or adjacent to the Proposed Alignment of Section 1)	Drains and catch basins were observed throughout the Proposed Alignment of Section 1.
Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	None identified
Septic systems or cesspools	None identified

A limited evaluation for the presence of contaminated building materials (e.g., ACM, LBP, and PCB-containing building materials) has been included in this Corridor Assessment.

- During the Proposed Alignment of Section 1 reconnaissance, suspect ACM and PCBs in the form of caulking material (i.e., between concrete joints) was observed in sidewalks throughout the Proposed Alignment of Section 1 along the Richmond Terrace and the bike path/service road and suspect LBP in the form of paint was observed on the Richmond Terrace roadway and bike path/service road throughout the Proposed Alignment of Section 1. In addition, suspect ACM, LBP and PCB-containing materials may be present in the stockpiles of soil observed on the western portion of the Proposed Alignment of Section 1.

Refer to *Figure 3S – Site Reconnaissance Findings* and *Table 1 – Site Reconnaissance Findings* for a description of properties located on the Proposed Alignment of Section 1 that were identified during the site reconnaissance and may have the potential to affect the construction or operation of the Proposed Project.

6.2.2 Neighboring Property Observations

Properties neighboring the eastern portion of the Proposed Alignment of Section 1 (Richmond Terrace) include: the St. George Terminal; a commercial shopping mall (Empire Outlets); the Staten Island Yankees baseball stadium; a multilevel parking garage; a construction site; Staten Island Municipal Buildings; commercial and residential properties, and, the western portion of the Proposed Alignment of Section 1 (described below).

Properties neighboring the western portion of the Proposed Alignment of Section 1 (bike path/service road) include: vegetated land along the shoreline; Richmond Terrace and North Shore Esplanade to the south of the Proposed Alignment of Section 1; two properties with former one-story structures containing abandoned cars and lumber, and an asphalt-paved semicircle utilized for parking to the north of the Proposed Alignment of Section 1; the Atlantic Salt property to the west; commercial and residential properties, and the eastern portion of the Proposed Alignment of Section 1 (described above).

Refer to *Figure 3S – Site Reconnaissance Findings* and *Table 3 – Site Reconnaissance Findings* for a description of surrounding properties that were identified during the site reconnaissance and may have the potential to affect the construction or operation of the Proposed Project.

7.0 INTERVIEWS

There were no historical use interviews conducted during the performance of this Corridor Assessment.

8.0 SUMMARY OF FINDINGS AND CONCLUSIONS

This Corridor Assessment Corridor Study evaluates the easternmost portion of the proposed alignment, identified as “Section 1”, located along the North Shore of Staten Island between St. George (St. George Terminal, located near the intersection of Richmond Terrace and Bay Street) and Jersey Street (near the intersection of Richmond Terrace and Jersey Street) in Richmond County, New York (the “Proposed Alignment of Section 1”) (See Figure 1). The Proposed Alignment of Section 1 extends approximately one-mile along the North Shore of Staten Island and ranges from approximately 75 to 150 feet in width and consists of the following:

- The eastern portion of the Proposed Alignment of Section 1 (between St. George Terminal and Nicholas Street/former North Shore Railroad ROW) consists of Richmond Terrace, which is a two-way/four-lane highway with a median and sidewalks; and,
- The western portion of the Proposed Alignment of Section 1 (between Nicholas Street and Jersey Street) consists of the former North Shore Railroad ROW and includes the Bank Street bike path/service road, North Shore Esplanade, vegetated land, and an asphalt-paved semicircle utilized for parking. In addition, a contractor’s storage yard is present on the Proposed Alignment of Section 1 near the intersection of Richmond Terrace and Nicholas Street and piles of stockpiled soil are located in the western portion of the Proposed Alignment of Section 1 between Nicholas Street and St. Peters Place.

The general alignment of the Proposed Alignment of Section 1 is paralleled with the north shore of Staten Island. A Site Location Map is included as *Figure 1*.

Earliest records identify the eastern portion of the Proposed Alignment of Section 1, between St. George Terminal and Nicholas Street, as Richmond Terrace since at least 1885 to present; and, the western portion of the Proposed Alignment of Section 1, from Nicholas Street to Jersey Street, formerly operated as a railway and was occupied by various commercial and manufacturing facilities from approximately 1885 to 1974, when they were demolished. The following facilities were formerly present on the Proposed Alignment of Section 1: dry cleaning; carpentry, and animal rendering; paint, plaster, textiles, and clock manufacturers; and lumber, coal, stone, and feed storage yards. Additionally, the Staten Island Rapid Transit Railway operated on the western portion of the Proposed Alignment of Section 1 from approximately 1885 to 2006.

Based on a review of the USGS topographic map, Jersey City/The Narrows quadrangle dated 2014/2013 (*Figure 1*), the easternmost portion of the Proposed Alignment of Section 1 is located approximately 400 to 1,000 feet southwest of the upper portion of the New York Bay (Upper Bay), the westernmost portion of the Proposed Alignment of Section 1 is located approximately 30 to 150 feet south of the Upper Bay, the Proposed Alignment of Section 1 elevation is approximately 30 to 40 feet amsl, and local topography slopes downward to the north/northwest in the westernmost portion of the Proposed Alignment of Section 1 and downward to the northeast in the easternmost portion of the Proposed Alignment of Section 1. The topographic downward slope observed at the Proposed Alignment of Section 1 during the Proposed Alignment of Section 1 reconnaissance is consistent with the downward slope that is observed in the USGS topographic maps. Generally, groundwater contour lines mimic the surface topography and groundwater flow direction is perpendicular to these contour lines flowing from higher to lower elevation. Based on local topography, the direction of shallow groundwater flow is north/northwest in the westernmost portion of the Proposed Alignment of Section 1, and northeast in the easternmost portion of the Proposed Alignment of Section 1, towards the Upper Bay; however, a subsurface

investigation would be required to determine actual groundwater flow direction. The depth to groundwater in the vicinity of the Proposed Alignment of Section 1 is reported as approximately 8 to 10 feet below ground surface (bgs) in the general vicinity of the Proposed Alignment of Section 1. (Mott MacDonald, 2017).

STV has performed a Corridor Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13. Any additions to, exceptions to, or deletions from this practice are described in Section 2.0 of this report.

As a result of this Corridor Assessment, including but not limited to visual observations of the Proposed Alignment of Section 1; review of historical information and environmental databases; the planned construction activities, and, professional judgement, the recognized environmental conditions (RECs), controlled RECs (CRECs), and/or historical RECs (HRECs), as defined by the ASTM E 1527-13 standard, are summarized below. The location of RECs is presented on Figures 3H, 3R, 3S, and 4 and a detailed description of RECs are presented on Tables 1 through 3.

Additionally, a limited evaluation for the presence of contaminated building materials (e.g., asbestos-containing material [ACM], lead-based paint [LBP], and PCB-containing building materials) has been included in this Corridor Assessment. Environmental concerns are presented on Figure 3S and a description is presented on Table 3

RECs within the Proposed Alignment of Section 1:

- a) Properties on the Proposed Alignment of Section 1 where contamination may exist and have the potential to affect the construction or operation of the Proposed Project were identified as follows:
 - The western portion of the Proposed Alignment of Section 1 was historically developed with a former railroad and structures that were demolished. Historic fill of unknown origin and suspect buried structures have the potential to impact the environmental integrity of the Proposed Alignment of Section 1 (H011).
 - Several current and historic commercial and manufacturing facilities were identified on the western portion of the Proposed Alignment of Section 1 (H018, H024, H026, and H027). These facilities include: dyeing and cleaning; animal rendering; textiles, and clock manufacturers; and lumber, coal, stone, and feed storage yards. The potential presence of petroleum-related, metal/polycyclic aromatic hydrocarbon (PAH)-related, and/or chlorinated-solvent-related contaminated soil and/or groundwater may exist on the Proposed Alignment of Section 1.
 - During the Proposed Alignment of Section 1 reconnaissance, a drum storage area consisting of three 55-gallon drums was observed on a contractor's storage yard on the central portion of the Proposed Alignment of Section 1 (S001). The drum storage area was inaccessible due to construction restraints, therefore STV's ability to inspect these drums was limited and unreported releases and/or mismanagement from the drum storage area has the potential to impact the environmental integrity of the Proposed Alignment of Section 1.
 - During the Proposed Alignment of Section 1 reconnaissance, piles of stockpiled soil were observed on the Proposed Alignment of Section 1 along the Richmond Terrace retaining wall in subsegments 1D and 1E (S002). The source of this material is unknown and may contain fill material

and suspect buried debris that has the potential to impact the environmental integrity of the Proposed Alignment of Section 1.

Environmental Concerns within the Proposed Alignment of Section 1:

During the Proposed Alignment of Section 1 reconnaissance, suspect ACM in the form of caulking material (i.e., between concrete joints) was observed in sidewalks throughout the Proposed Alignment of Section 1 along the Richmond Terrace and the bike path/service road and suspect LBP in the form of paint was observed on the Richmond Terrace roadway and bike path/service road throughout the Proposed Alignment of Section 1. In addition, suspect ACM, LBP and PCB-containing materials may be present in the stockpiles of soil observed on the western portion of the Proposed Alignment of Section 1. The potential presence of ACM, LBP, and PCB-containing materials is considered an environmental concern (EC).

RECs Outside the Proposed Alignment of Section 1:

- a) Properties not on the Proposed Alignment of Section 1 where contamination may exist and have the potential to affect the construction or operation of the Proposed Project were identified as follows:
- Several current and historic commercial and manufacturing facilities were identified on properties adjacent to and surrounding the Proposed Alignment of Section 1 since at least 1885 (H001 through H010, H012 through H017, H019 through H023, H025, and H028 through H030). These facilities, which are located throughout the surrounding area, but focused primarily in areas surrounding the westernmost and easternmost portions of the Proposed Alignment of Section 1 include: a former railyard, auto wash and repair, machine and carpentry shops, lumber and paint storage, gasoline filling stations, tire service, dry cleaning/laundry; sign printing; paints and oils sales; carpentry; upholstery; sheet metal works; an electric company and sub-station with transformers; automobile repair and wash shops; gasoline filling stations; lumber, coal, stone, and feed storage yards; and paint, chemical, and several manufacturers. The potential presence of petroleum-related, metal/PAH-related, and/or chlorinated-solvent-related contaminated soil and/or groundwater may have impacted the Proposed Alignment of Section 1.
 - Properties located in close proximity to the Proposed Alignment of Section 1 are listed in the regulatory database report for: spills and a Voluntary Cleanup Program site (R001); spills; petroleum bulk storage; and hazardous waste generation (R002, R003, R004, and R005); and spills including one open spill and petroleum bulk storage (R006). The potential presence of petroleum-related, metal/PAH-related, and/or chlorinated-solvent-related contaminated soil and/or groundwater may have impacted the Proposed Alignment of Section 1.
 - During the Proposed Alignment of Section 1 reconnaissance, a metal-framed structure, housing metal debris (i.e., abandoned car parts), and a concrete structure housing lumber and miscellaneous construction debris, were identified north-adjacent to western portion of the Proposed Alignment of Section 1 in landscaped land which is suggestive of potential dumping (S003). The potential dumping and material mismanagement may have impacted the environmental integrity of the Proposed Alignment of Section 1.

Recommendations

Based on the review of preliminary construction plans for the Proposed Project and the identified RECs and environmental concerns at or in close proximity to the proposed construction area, the potential exists to encounter contamination during construction activities. In addition, based on the planned construction activities and anticipated depth to groundwater, dewatering may be required as part of construction.

On-site professionals should be prepared to encounter one or more of the following types of contamination/waste in soil and/or groundwater during construction activities: petroleum-related; metal/PAH-related; and chlorinated-solvent-related. In addition, suspect ACM, LBP, and PCB-containing building materials may be encountered.

All material affected by construction should be identified and properly managed during such activities in accordance with applicable rules and regulations. Additionally, proper precaution (i.e., personal protective equipment) should be taken by all involved parties during construction, in accordance with Occupational Safety and Health Administration (OSHA) Construction Standard 1926.65, Hazardous waste operations and emergency response (OSHA, Safety and Health Regulations for Construction (29 CFR 1926.65). Each party assumes entire responsibility and liability for complying fully in all respects with these regulations.

Groundwater drawn towards the Proposed Alignment of Section 1 during dewatering for construction could be contaminated and may require special treatment and permitting prior to disposal. Soil excavated during construction could be contaminated and may require special treatment and disposal and may not be suitable as backfill. It is recommended that a Soil and Groundwater Materials Management Plan be prepared and implemented during the construction phase.

The passage of time may result in a change in the environmental characteristics at the Proposed Alignment of Section 1. The report does not warrant against future operations or conditions that could affect the recommendations made.

9.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

VHB/STV Joint Venture has performed a Corridor Assessment of the property located along the North Shore of Staten Island between the intersection of Richmond Terrace and St. George (St. George Terminal, located near the intersection of Richmond Terrace and Bay Street, and Jersey Street in Richmond County, New York. The scope of the Corridor Assessment was generally consistent with the requirements of ASTM Standard Practice E 1527-13. Signatures of the Environmental Professionals who participated in conducting this Corridor Assessment are provided below. Qualifications for these individuals are provided in *Appendix G*. VHB/STV Joint Venture declares that to the best of their professional knowledge and belief, they meet(s) the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. VHB/STV Joint Venture has the specific qualifications based on education, training and experience to assess the subject property. VHB/STV Joint Venture has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

TABLES

Table 1
Historical Records Review Findings

REC ID	Source(s)	Description
H001	Sanborn Maps (1898-2007), Aerial Photographs (1924-2017)	A property located north of the Proposed Alignment of Segment 1, in subsection 1B, was occupied by NY & Staten Island Electric Co from 1898 to 1917 and has been occupied by an electric sub-station with transformers since at least 1937. Petroleum-based dielectric fluid and polychlorinated biphenyls (PCBs) may have impacted groundwater on the Proposed Alignment of Section 1.
H002	Sanborn Maps (1950-2007), Aerial Photographs (1954-2017)	A property located north of the Proposed Alignment of Section 1, in subsection 1A, has been occupied by a bus terminal, which includes auto wash and repair activities, since approximately 1950. Petroleum products, metals, and/or solvents associated with vehicle maintenance may have impacted groundwater on the Proposed Alignment of Section 1.
H003	Sanborn Maps (1898-2007), Topographic Maps (1947-2014), Aerial Photographs (1955-2017)	A property located north of the Proposed Alignment of Section 1, in subsection 1A, has been occupied by a ferry terminal since at least 1894, including machine and carpentry shops and lumber and paints storage facilities. Petroleum products, metals, and/or solvents associated with maintenance may have impacted groundwater on the Proposed Alignment of Section.
H004	Sanborn Maps (1898-2007), Topographic Maps (1947-2013/2014), Aerial Photographs (1924-2013)	The "Staten Island Rapid Transit Railroad Yard"/"Baltimore & Ohio Railroad Yard" was present north of the Proposed Alignment of Section 1, in subsegments 1A through 1C, from approximately 1898 to 2013. Petroleum-related and/or metal waste associated with maintenance and rail car/tank truck upkeep may have impacted groundwater on the Proposed Alignment of Segment.
H005	Sanborn Maps (1917-2002), Aerial Photographs (1924-1995)	A property located north of the Proposed Alignment of Section 1, in subsection 1B, was formerly occupied by a carpentry shop and lumber and supplies storage facility and a reference to waste oils from approximately 1917 to 2002. Petroleum-, waste oil-, and/or solvent-related waste may have impacted groundwater on the Proposed Alignment of Section 1.
H006	Sanborn Maps (1937-1977)	A property located south of the Proposed Alignment of Section 1, in subsection 1B, was occupied as a gasoline filling station from approximately 1937 to 1977. Petroleum products may have impacted groundwater on the Proposed Alignment of Section 1.
H007	Sanborn Maps (1977-2007)	A property located south of the Proposed Alignment of Section 1, in subsection 1B, was occupied by a manufacturing facility from approximately 1977 to 2007. Petroleum- and solvent-related waste, and/or metal waste may have impacted groundwater on the Proposed Alignment of Section 1.
H008	Sanborn Maps (1937-1962), Aerial Photographs (1940-1974)	A property located south of the Proposed Alignment of Section 1, in subsection 1B, was occupied by a gasoline filling station and tire service shop from approximately 1937 to 1962. Petroleum and solvent-related waste, and/or metal waste may have impacted soil and groundwater on the Proposed Alignment of Section 1.
H009	Sanborn Maps (1917-1990), Aerial Photographs (1924-1984/1985)	A property located north of the Proposed Alignment of Section 1, in subsection 1B, was occupied by several coal piers from approximately 1917 to 1985. Petroleum- and/or metal waste may have impacted groundwater on the Proposed Alignment of Section 1.
H010	Sanborn Maps (1937)	A property located south of the Proposed Alignment of Section 1, in subsection 1D, was occupied by a gasoline filling station in 1937. Petroleum products may have impacted groundwater on the Proposed Alignment of Section 1.

Table 1
Historical Records Review Findings

REC ID	Source(s)	Description
H011	Sanborn Maps (1885-1962)	Properties on the Proposed Alignment of Section 1 in subsections 1C through 1E were formerly occupied by a railroad and buildings. Metal and/or polycyclic aromatic hydrocarbon (PAH) impacts associated with land clearing and demolition may have impacted soil and groundwater on the Proposed Alignment of Section 1.
H012	Sanborn Maps (1937)	A property located south the Proposed Alignment of Section 1, in subsection 1E, was occupied by a sign painting facility in 1937. Solvent-related waste may have impacted the soil and groundwater at this location.
H013	Sanborn Maps (1898)	"Standard Oil Co." was located north of the Proposed Alignment of Section 1, in subsection 1E, in 1898. Petroleum products may have impacted groundwater on the Proposed Alignment of Section 1.
H014	Sanborn Maps (1898)	A property located south of the Proposed Alignment of Section 1, in subsection 1E, was occupied by a laundry facility in 1898. Solvent-related waste may have impacted groundwater on the Proposed Alignment of Section 1.
H015	Sanborn Maps (1898)	A property located south of the Proposed Alignment of Section 1, in subsection 1E, was occupied by a laundry facility in 1898. Solvent-related waste may have impacted groundwater on the Proposed Alignment of Section 1.
H016	Sanborn Maps (1885-1977), Aerial Photographs (1940-1961)	A property located north of the Proposed Alignment of Section 1, in subsection 1E, was occupied by "P.H. Cassidy" and "Burns Bros" lumber and coal yards from at least 1885 to 1950. The property was developed with "Brighton Material Co Inc" from 1950 to 1977. Petroleum products, metal waste, and/or solvent-related waste may have impacted soil and groundwater at this location.
H017	Sanborn Maps (1977)	A property located south of the Proposed Alignment of Section 1, in subsection 1E, was occupied by a laundry facility in 1977. Solvent-related waste may have impacted the soil and groundwater on the Proposed Alignment of Section 1.
H018	Sanborn Maps (1917)	A property located on the Proposed Alignment of Section 1, in subsection 1E, was occupied by a wood and coal yard in 1898 and an animal rendering facility in 1917. Petroleum products, metal waste, solvent-related waste, and/or biological-related impacts may have impacted the soil and groundwater on the Proposed Alignment of Section 1.
H019	Sanborn Maps (1962)	A property located south of the Proposed Alignment of Section 1, in subsection 1E, was occupied by a mattress manufacturing facility in 1962. Petroleum products and/or solvent-related waste may have impacted groundwater on the Proposed Alignment of Section 1.
H020	Sanborn Maps (1885)	A property located south of the Proposed Alignment of Section 1, in subsection 1E, was occupied by an upholstering facility in 1885. Petroleum products and/or solvent-related waste associated with furniture staining, painting, and finishing may have impacted groundwater on the Proposed Alignment of Section 1.
H021	Sanborn Maps (1937)	A property located south of the Proposed Alignment of Section 1, in subsection 1E, was occupied by a sheet metal facility in 1937. Metal waste may have impacted groundwater on the Proposed Alignment of Section 1.
H022	Sanborn Maps (1917)	A former auto repair facility located south of the Proposed Alignment of Section 1, in subsection 1E, was identified as "West Brighton Garage" in 1917. Petroleum products, metal waste, and/or solvent-related waste associated with vehicle maintenance may have impacted groundwater on the Proposed Alignment of Section 1.

Table 1
Historical Records Review Findings

REC ID	Source(s)	Description
H023	Sanborn Maps (1885, 1950)	A property located south of the Proposed Alignment of Section 1, in subsection 1E, was occupied by an upholstering facility and furniture repair shop in 1885 and 1950. Petroleum products and/or solvent-related waste associated with furniture staining, painting, and finishing may have impacted groundwater on the Proposed Alignment of Section 1.
H024	Sanborn Maps (1885)	A property located on the Proposed Alignment of Section 1, in subsection 1E, was occupied by a dyeing and laundry facility in 1885. Solvent-related waste may have impacted the soil and groundwater on the Proposed Alignment of Section 1.
H025	Sanborn Maps (1917-1977)	A property located north of the Proposed Alignment of Section 1, in subsection 1E, was occupied by "John J Wood coal, wood, and feed yard" from 1898 to 1937 and "Milling & Warehouse Co" from 1937 to 1950. Additionally, the property was occupied by "Muralo Co" paint manufacturers and "Ball Corp'n" crate manufacturers from at least 1917 to 1977. Petroleum products, metal waste, and/or solvent-related waste may have impacted groundwater on the Proposed Alignment of Section 1.
H026	Sanborn Maps (1950)	A property located on the Proposed Alignment of Section 1, in subsection 1E, was occupied by a clock manufacturing facility in 1950. Petroleum products, metal waste, and or solvent-related waste may have impacted soil and groundwater on the Proposed Alignment of Section 1.
H027	Sanborn Maps (1917)	A property located on the Proposed Alignment of Section 1, west of subsection 1E, was identified as "Morrison & Co Manufacturers of Clocks & Suits" in 1917. Petroleum products, metal waste, and/or solvent-related waste may have impacted soil and groundwater on the Proposed Alignment of Section 1.
H028	Sanborn Maps (1885-1937),	A property located south of the Proposed Alignment of Section 1, in subsection 1E, was occupied by "Dye Works The Irving Manufacturing Company" from approximately 1885 to 1937. Petroleum products and/or solvent-related waste may have impacted the groundwater on the Proposed Alignment of Section 1.
H029	Sanborn Maps (1885)	A property located south of the Proposed Alignment of Section 1, in subsection 1E, was identified as "Cigars Printing", a former printing facility in 1885. Metal and/or solvent-related waste may have impacted groundwater on the Proposed Alignment of Section 1.
H030	Sanborn Maps (1898)	A property located south of the Proposed Alignment of Section 1, in subsection 1E, was occupied by a laundry facility in 1898. Solvent-related waste may have impacted groundwater on the Proposed Alignment of Section 1.

Notes:

Bolded REC IDs indicate sites where contamination may exist and has the potential to affect the construction or operation of the Proposed Project.

REC – Recognized Environmental Condition

Refer to Figure 3H – Historical Records Review Findings for the location of the RECs and subsegments

HXXX – REC identified in Historical Records

Table 2
Regulatory Agency Records Review Findings

REC ID	MAP ID	Database(s)	Description
R001	L70 – L72	NY VCP, NY SPILLS,	This property, located adjacent southeast to the Proposed Alignment of Section 1 near the intersection of Richmond Terrace, Bay Street, and Ferry Terminal Viaduct Roadway, in subsection 1B, is listed in the regulatory database report for petroleum spills associated with leaking construction equipment. The regulatory database report indicates that petroleum-impacted soil was excavated and is currently being staged on the site, pending transportation and off-site disposal. Additionally, this property is listed as a NYC OER and VCP site for on-site petroleum-related contamination. Due to the lack of information provided regarding the off-site disposal of the excavated soil, and the property's enrollment in environmental cleanup programs, soil and/or groundwater at the Proposed Alignment of Section 1 may have been affected by the petroleum contamination at this
R002	J32 – J66, J106, J112 – J129,	NY Spills, NY AST, ERNS, FINDS, ECHO, US AIRS, RCRIS NONGEN/LQG, NJ Manifest, NY AIRS, NY LTANKS, NY SPDES, NY UST, NY Manifest, RCRA VSQG,	This property, This property, located adjacent-north to the Proposed Alignment of Section 1, in subsection 1A, is occupied as a ferry terminal. The regulatory database report indicates several reported spills (i.e., hydraulic oil, no. 2 fuel oil, diesel fuel) at this property, including: a 200 gallon diesel oil spill reported in 2013; spills that have affected nearby water bodies; spills that have reported nonrecoverable sheens and detectable petroleum-like odors; and, the observation of oil in the nearby water body coming from an upstream source that is unknown and off-site. This property is listed as a current and historic LQG for several hazardous wastes, including: benzene; ignitable waste; corrosive waste; lead; methyl ethyl ketone; spent nonhalogenated solvents; and, waste oils, and has received violations associated with the generation/transport of the aforementioned wastes. Additionally, this property has a history of ongoing remedial actions, has triggered the US AIRS monitoring program, and contains several on-site PBS tanks.
R003	AJ224 – AJ227, AJ313 – AJ314	NY LTANKS, RCRIS NonGen/LQG, FINDS, ECHO, NY Manifest, NY UST, NY AST, NY Manifest	This property, located adjacent-southwest of the Proposed Alignment of Section 1 near the intersection of Richmond Terrace and Bay Street, in subsection 1B, is listed in the regulatory agency database as a LQG of hazardous petroleum waste, a spill, and compliance violations associated with an on-site UST. In 1990, two 10,000-gallon no. 2 fuel oil tanks were installed at this property, one of which was closed in place in 2012. The regulatory agency database report indicates that the closed-in-place UST is vaulted with no access for inspection, and in 2008 this tank failed tightness testing. Due to the lack of visual confirmation that this violation did not result in a petroleum release, there is potential that soil and/or groundwater were affected. Additionally, this property was historically a CESQG/SQG of hazardous lead and mercury.

Table 2
Regulatory Agency Records Review Findings

REC ID	MAP ID	Database(s)	Description
R004	BC359 - BC362	NY LTANKS, NY UST, RCRIS NonGen/SQG, FINDS, ECHO, NY Manifest, NY E- Designation	This property, which is located approximately one block southwest of the Proposed Alignment of Section 1 near the intersection of Schuyler Street and Stuyvesant Place, in subsection 1B, is listed in the regulatory agency database report for several tank test failures: two reported in 1990 and 1992, associated with an unregulated 1,500 gallon no. 6 fuel oil UST; and, one reported in 1991, associated with a 5,000 gallon no. 2 fuel oil AST. The 1,500 gallon UST was closed in place in 2001; however, documentation regarding the compliance of this tank after the violations were reported is not provided, and the spill associated with the 5,000 gallon no. 2 fuel tank was closed in 2003; however, the regulatory agency database report indicates that clean up requirements were not met. Additionally, this property is listed as a SQG of PCBs, and a historic SQG of corrosive waste, and is E-Designated since 2008 for air quality associated with natural gas heat and hot water. Based on the history of violations and the industrial nature of this property, documented petroleum spills, and historic petroleum storage at this property, the environmental integrity of the surrounding area may have been
R005	F18-F23	RCRIS NonGen, FINDS, ECHO, NY Manifest, NY UST, NY Spills	This property This property (formerly occupied as a railyard), located adjacent-northeast of the Proposed Alignment of Section 1 near the intersection of Richmond Terrace and Wall Street, in subsection 1B, is listed in the regulatory agency database report as a LQG of hazardous lead, and a petroleum release associated with an on-site UST. The NYSDEC PBS database indicates that one 2,500-gallon no. 2 fuel oil UST was present on this property until June 1999, when the tank was closed and removed (installation date not provided). Additionally, in June 1999, a petroleum spill was reported when a leaking no. 2 fuel oil UST was discovered on this property, and the regulatory agency database report indicates that groundwater may have been affected. This spill case was closed in 2001; however, information regarding the investigation/remediation of the release is not provided. Further, the duration of the release and integrity of the UST prior to June 1999 are unknown.
R006	F139, F142, F144	NY UST, NY AST, LTANKS, NY Spills	This property is located adjacent-southwest of the Proposed Alignment of Section 1 near the intersection of the Richmond Terrace and Wall Street in subsection 1B, is listed in the regulatory agency database report for multiple closed and active gasoline USTs/ASTs, and multiple closed spill cases and one open spill case (NYSDEC Spill Case Number 0904952). The spill case was opened on 7/29/2009 due to contaminated soil discovered during a tank removal. Free product was observed in the concrete vault, tank was removed and endpoint samples were collected and analyzed. The database reported some contaminants were detected above NYSDEC standards. Additional soil and groundwater investigations were performed and widespread VOC contamination in soil was identified. No groundwater contamination was reported. The volume of the contamination in soil was estimated as 60 feet by 40 feet by 8 feet thick. Remediation efforts consisting of a Soil Vapor Extraction (SVE) pilot test was undertaken and periodic groundwater monitoring and rounds of confirmatory soil sampling were performed. Groundwater results were non-detect but soil contamination

Table 2
Regulatory Agency Records Review Findings

REC ID	MAP ID	Database(s)	Description
			remained present and a SVE treatment system was installed. The NYSDEC memorandum indicates that as of June 2019 the remediation efforts including an operations SVE system. The spill case remains open. Although groundwater impacts have not been identified, the presence of petroleum contamination and since the spill case remains open there is potential for this property to impact the Proposed Alignment of Section 1.

Notes:

Bolded REC IDs indicate sites where contamination may exist and has the potential to affect the construction or operation of the Proposed Project.

RXXX – REC identified in Regulatory Agency Records Review

REC – Recognized Environmental Condition

Refer to Figure 3R – Regulatory Agency Records Review Findings for the location of the RECs and subsegments

Acronyms:

AST – Aboveground Storage Tanks

CESQG – Conditionally Exempt Small Quantity Generators

ECHO – Enforcement & Compliance History Information

E-Designation – Environmental Designation

ERNS – Emergency Response Notification System

FINDS – Facility Index System/Facility Registry System

LQG – Large Quantity Generator

LTANKS – Leaking Storage Tank Incident Reports

NonGen – Non-Generators

NY AIRS – State Air Emissions Data

NY Spills – New York State Spills Information

NYSDEC – New York State Department of Environmental Conservation

PBS – Petroleum Bulk Storage

PCB – Polychlorinated Biphenyls

RCRIS Gen/Trans – Resource Conservation and Recovery Information System Generators/Transporters

SEMS-ARCHIVE – Superfund Enterprise Management System

SHWS – New York State Inactive Hazardous Waste Disposal Site (State Superfund)

SPDES - State Pollutant Discharge Elimination System

SQG – Small Quantity Generator

SVOC – Semivolatile Organic Compounds

US AIRS – Federal Air Emissions Data

UST – Underground Storage Tanks

VOC – Volatile Organic Compounds

VSQG – Very Small Quantity Generator

Table 3
Site Reconnaissance Findings

REC ID	Description
S001	Three 55-gallon drums were identified on the Proposed Alignment of Section 1 in subsection 1C. The drum storage area was inaccessible due to construction restraints, therefore STV's ability to inspect these drums was limited. Spill containment platforms and drum identification labels were not observed, and no odors or staining were noted. Due to the limitations of STV's inspection, there is potential that the environmental integrity of the Proposed Alignment of Section 1 has been impacted.
S002	Stockpiled soil/earth material was observed on the Proposed Alignment of Section 1 in subsegments 1D and 1E. The source of this material is unknown, therefore there is potential that this soil may contain metals and/or PAHs. In addition, suspect ACM, LBP, and PCB-containing materials may be present in the stockpiled soil/earth material and is considered an environmental concern.
S003	A metal-framed structure, housing metal debris (i.e., abandoned car parts), and a wooden structure housing lumber and miscellaneous construction debris, were identified north-adjacent to western portion of the Proposed Alignment of Section 1 in landscaped land which is indicative of a derelict property with potential illegal dumping. The potential illegal dumping and material mismanagement may have impacted the environmental integrity of the Proposed Alignment of Section 1.

Notes:

Bolded REC IDs indicate sites where contamination may exist and has the potential to affect the construction or operation of the Proposed Project.

REC – Recognized Environmental Condition

Refer to Figure 3S – Site Reconnaissance Findings for the location of the RECs and subsegments

SXXX – REC identified during the Proposed Alignment of Section 1 reconnaissance

Environmental concerns associated with suspect ACM, LBP, and PCB-containing building materials were observed at S002 and throughout the Proposed Alignment of Section 1 in the form of caulking material (i.e., between concrete joints) for sidewalks and suspect LBP in the form of paint on the Richmond Terrace roadway and bike path/service road.

Acronyms:

ACM – Asbestos-containing material

LBP – Lead-based paint

ROW – Right-of-way

PAH – Polycyclic aromatic hydrocarbons

PCB – Polychlorinated biphenyl

Legend

SEE FIS REPORT FOR DETAILED LEGEND AND INDEX MAP FOR FIRM PANEL LAYOUT

SPECIAL FLOOD HAZARD AREAS		Without Base Flood Elevation (BFE) Zone A, V, A99
		With BFE or Depth Zone AE, AO, AH, VE, AR
		Regulatory Floodway
OTHER AREAS OF FLOOD HAZARD		0.2% Annual Chance Flood Hazard, Areas of 1% Annual chance flood with average depth less than one foot or with drainage areas of less than one square mile Zone X
		Future Conditions 1% Annual Chance Flood Hazard Zone X
		Area with Reduced Flood Risk due to Levee. See Notes. Zone X
		Area with Flood Risk due to Levee Zone D
OTHER AREAS		NO SCREEN Area of Minimal Flood Hazard Zone X
		Effective LOMRs
		Area of Undetermined Flood Hazard Zone D
GENERAL STRUCTURES		Channel, Culvert, or Storm Sewer
		Levee, Dike, or Floodwall
OTHER FEATURES		20.2 Cross Sections with 1% Annual Chance Water Surface Elevation
		17.5 Coastal Transect
		Base Flood Elevation Line (BFE)
		Limit of Study
		Jurisdiction Boundary
		Coastal Transect Baseline
		Profile Baseline
MAP PANELS		Digital Data Available
		No Digital Data Available
		Unmapped

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on **10/14/2019 at 6:29:50 PM** and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

Contact: Matthew Mankovich

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by STV Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by STV Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by STV Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by STV Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

—

An aerial photograph showing a residential neighborhood. A road runs diagonally across the upper portion of the image. Below the road, there are several large, rectangular buildings, possibly industrial or commercial, and a large, dark, irregularly shaped area that could be a pond or a large building. The surrounding area is filled with smaller, more densely packed structures.

Certified Sanborn® Map Report

10/07/19

Site Name:

Staten Island North Shore BRT
Bay Street and Richmond Terr
Staten Island, NY 10301
EDR Inquiry # 5814082.1

Client Name:

STV Inc.
225 Park Ave S
New York, NY 10003
Contact: Matthew Mankovich

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by STV Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 261E-4C70-9176

PO # NA

Project 4019716

Maps Provided:

2007	1996	1988	1937
2006	1995	1987	1922

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by STV Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by STV Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by STV Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by STV Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by STV Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

5814082 - 1 page 27

A horizontal number line representing distance in feet. The line starts at 0 and ends at 600. Major tick marks are labeled at 0, 150, 300, and 600. There are two horizontal brackets above the line. The first bracket spans from 0 to 150 and is labeled "150 feet". The second bracket spans from 150 to 300 and is also labeled "150 feet". A third bracket spans from 300 to 600 and is labeled "300 feet".

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by STV Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Contact: Matthew Mankovich

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by STV Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Staten Island, NY 10303
EDR Inquiry # 5814424.5

Client Name:

STV Inc.
225 Park Ave S
New York, NY 10003
Contact: Matthew Mankovich

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by STV Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDR's Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:**Coordinates:**

P.O.#	NA	Latitude:	40.63292 40° 37' 59" North
Project:	4019716	Longitude:	-74.16821 -74° 10' 6" West
		UTM Zone:	Zone 18 North
		UTM X Meters:	570341.86
		UTM Y Meters:	4498341.52
		Elevation:	28.00' above sea level

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EPA ID: NJD980528996
Summary: Conditions at listing September 1983): The Diamond Alkali Co. Site occupies about 1 acre immediately adjacent to the Passaic River, in Newark, Essex County, New Jersey. From 1943 through 1968, the company manufactured numerous chemicals on

EPA ID: NJD980528996
Summary: the site, including 2,4,5-trichlorophenol, which is likely to contain dioxin as an impurity. Extensive sampling conducted by EPA and the State has detected extremely high concentrations of dioxin on and off the site. EPA and the State have co

EPA ID: NJD980528996
Summary: vered the area of major contamination with plastic tarpaulins. Adjacent transportation routes and residential areas were swept and vacuumed. Workers may have been exposed to dioxin during normal operations, as well as during renovations conduc

EPA ID: NJD980528996
Summary: ted during the summer of 1982. Another company has since purchased the land. The area is both densely populated and heavily industrialized. Municipal water is drawn from the Wanaque Reservoir, roughly 35 miles from the site. Status

EPA ID: NJD980528996
Summary: June 1984): On March 13, 1984, the State and Diamond entered into an Administrative Order on Consent for a remedial investigation/feasibility study and for on-site cleanup.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Tank Info:

Tank Number: 001
Tank Id: 10412
Material Code: 0003
Common Name of Substance: #6 Fuel Oil (On-Site Consumption)

Equipment Records:

L09 - Piping Leak Detection - Exempt Suction Piping
H00 - Tank Leak Detection - None
A01 - Tank Internal Protection - Epoxy Liner
D01 - Pipe Type - Steel/Carbon Steel/Iron
G10 - Tank Secondary Containment - Impervious Underlayment
I04 - Overfill - Product Level Gauge (A/G)
F00 - Pipe External Protection - None
B00 - Tank External Protection - None
C00 - Pipe Location - No Piping
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.

Tank Type: Steel/Carbon Steel/Iron
Tank Status: Closed - In Place
Pipe Model: Not reported
Install Date: 10/01/1979
Capacity Gallons: 20000
Tightness Test Method: -
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: 08/22/2016

Tank Info:

Tank Number: 2
Tank Id: 244226
Material Code: 0008
Common Name of Substance: Diesel

Equipment Records:

E00 - Piping Secondary Containment - None
L00 - Piping Leak Detection - None
D00 - Pipe Type - No Piping
I04 - Overfill - Product Level Gauge (A/G)
H02 - Tank Leak Detection - Interstitial - Manual Monitoring
C00 - Pipe Location - No Piping
F00 - Pipe External Protection - None
G09 - Tank Secondary Containment - Modified Double-Walled (Aboveground)
K00 - Spill Prevention - None
A00 - Tank Internal Protection - None
B01 - Tank External Protection - Painted/Asphalt Coating
J02 - Dispenser - Suction Dispenser
I05 - Overfill - Vent Whistle

Tank Location: Aboveground - on saddles, legs, racks, etc.... Tank bottom is elevated above grade or tank pad, allowing visual inspection.

Tank Type: Steel/Carbon Steel/Iron

Tank Status: Closed - Removed

Pipe Model: Not reported

Install Date: Not reported

Capacity Gallons: 2000

Tightness Test Method: NN

Date Test: Not reported

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility
Subsystem) replaces the former Compliance Data System (CDS), the
National Emission Data System (NEDS), and the Storage and Retrieval of
Aerometric Data (SAROAD). AIRS is the national repository for
information concerning airborne pollution in the United States. AFS is

Map ID
Direction
Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

NYC DOT ST GEORGE FERRY TERMINAL (Continued)

1016022853

used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

COMPLIANCE AND EMISSIONS REPORTING

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

DEC Memo: "9/11/07 called Bill Kane of DOT (646)772-9765. He did not know of tank failure and was driving back to St. George Terminal. He said that he will call me in approximately 1/2 hour and let me know what happened. Mr. Kane called back and he called Crompco and left message. He will call me back when he gets more information. TTF letter sent to: Frank Nicolosi NYCDOT Division of Ferries 1 Bay Street Staten Island, NY 10301 bf 10/9/07 On 10/5/07 received message from Frank Nicolosi of DOT (917)731-3321. I called him back today and he wanted to confirm what was needed as far as a response to the ttf letter. The tank should be repaired in next 2 to 3 weeks and will forward documentation to me when he gets it. bf 2/21/08 Called F. Nicolosi. Tank was retested and passed (I knew this and saw the results). Gemstar did repair: put in new manway. No release of product observed. Letter will be sent when he gets it. It will probably be issued within the month. Delay since Gemstar was not paid yet. bf 9/26/08 Received message from Ed Brusher(sp?) regarding status on 9/24/08 at 0836. Returned call today and left message stating that closure letter is needed. bf 10/6/08 On 10/3/08, received fax from John Saia of Gemstar Construction Corp. On 12/7/07, Gemstar replaced manway, tank sump and remote fill. No visual sign of contamination found. bf"

w/ update. 0830 DEC Piper contacted Bill to obtain status at Ferry Terminal. Bill will call back. 0850 DEC Piper spoke w/ Bill, there is a blueish sheen in terminal waters. No floating product observed. non recoverable. 0915 DEC Piper left message for USCG P.O. Tom for update. 0925 DEC Piper received e-mail from DEC Austin. Forwarded Message from USCG Lt.Cmdr. Hermes- Sanchez states This morning at approximately 6:00 am Sector New York received several > reports from Mariners as well as the NRC reporting fuel oil in the > water from north of the VZ Bridge to east of the Bayonne Bridge. > > Sector New York is currently investigating the source and responding > to this information. A CG team has reported a heavy rainbow sheen > with no recoverable product in the vicinity of Bayonne Bridge on the > New Jersey side. A NYPD overflight has uncovered that the fuel oil > may have entered Newark Bay. A CG Auxiliary Flight is scheduled to > evaluate for the area. > > Based on the available information, Ken's Marine and Miller's > Environmental Group are currently on stand-by for booming operations > of sensitive areas. 0945 DEC Piper contact USCG Pollution Response. As per them, a Vessel Theo T transferred 100K barrels of Diesel this morning to barge DV105 . Samples are being collected from water, vessel and barge to determine if they are responsible party. Sheen extends from Verrazano Br. to Newark Bay. USCG overflight not completed. USCG to contact DEC if recoverable amount of product is observed. 1100 DEC Piper spoke w/ USCG TOM, as per conversation, sheen is light. No cleanup is possible. Samples will be sent to lab and update will be given upon results next week. Case will remain open. 12/12/06- DECP iper spoke w/ USCG. The sample was not a match for the barge. This case is closed. "

DEC Memo: "09/13/13- kumar will inspected this site John Garvey 718-876-5026.
10/18/13-John Garvey sent the following email dated 10/18/13. Per our
discussion, on the morning of September 13th, 2013, the captain
aboard the F/B Samuel I. Newhouse reported that he observed oil in
the water around the vessel where it was docked in St George. I
ordered that the vessel be boomed in and contained until such time
that we could determine the source of the oil. After checking the
various tanks aboard the ferry, it was determined that the oil was

not coming from the Newhouse. I then called back to the USCG Command Center at Fort Wadsworth and inquired if there had been any spills in the area. The USCG duty officer advised that there had been an oil spill in the Kill Van Kull. It is my belief that the oil had been carried by the current out to the Upper Bay of New York Harbor. As the F/B Newhouse was crossing the lanes to enter a berth at St George, she pushed some of the oil into the slips at St George. All of the charges for the cleaning of the oil boom and the replacement of the absorbent materials was passed by Miller s Launch and/or Miller s Environmental to the responsible party. I am not knowledgeable of the name of the party. Spill Closed."

VINYLTECH WINDOWS MFG (Continued)

S107488915

He says the site was a car repair yard and soil and water testing was done as part of a Phase 2. Soil samples came back clean and Water samples came back with minor hits. He believes the hits are background (GW at 5 ft depth, near shoreline) He'll put together a report for the DEC which shows minor hits in an industrial neighborhood with little or no human impacts. 1/27/2006 Don Middleton Jr (631-321-4300) He called looking for a closure. Site is in an industrial area and the report he has shows there was no soil contamination and only minor water contamination -which he beleives is background in the area (site is on the shoreline of the Arthur Kill) 1/30/06 - Raphael Ketani. Don Middleton Jr. (Middleton Environmental - bank's investigative company) called to ask whether I received the report from Associated Environmental. I told him that I hadn't. He said that he will have the report FAXed to me. 2/2/06 - Raphael Ketani. I received a FAX of the December 2, 2005 dated Limited Phase II Investigation report (with analytical data) on January 31, 2005. I reviewed the report. I spoke to Mr. Middleton regarding the report. I told him there should have been more soil borings and more surveys. I told him, otherwise, the analyticals do not indicate the need for remediation. I told him I would call John Schretzmayer (buyer's envir. company) at Associated Environmental Services ((631) 744-8900). I spoke to Mr. Schretzmayer and asked why 2 borings were done in the northwest corner only. He said that the previous owner had used this area to pour liquids onto the grass and then wash them down a drain with a garden hose. He said that this wasn't a high volume car repair place and was more like a casual use car repair and auto body shop. Mr. Schretzmayer said that the site is about 40'X20'X30'X30'. I explained that, despite its small size, the property needs to be more thoroughly investigated. He told me to send him the letter wherein DEC requests that more work should be done. I said that he should receive the letter soon. 2/8/06 - Raphael Ketani. Mr. Schretzmayer called me yesterday to discuss the letter and map I had sent requesting additional borings. I was able to reach him today and I explained why just 2 borings in one corner of the site wasn't adequate to determine the subsurface conditions. He said he was going out there today to do the additional borings that DEC requested. 3/2/06 - Raphael Ketani. I received a FAXed (3/1/06) copy of the analytical results for soil samples taken at the four borings I requested in the DEC 2/2/06 letter. There were no hits of VOCs, except one instance of 11 ppb MTBE. SVOC hits were present - more in some borings than others - but they were either below or just above TAGM. Therefore, I am closing the case. They have requested an NFA letter and I will send one to Albert Garjiulo (owner) and Mr. Schretzmayer."

Remarks: "SOIL SAMPLES CAME BACK WITH CONTAMINATION; STEVE HAS BEEN NOTIFIED FROM DEC;"

DEC Memo: "6/9/15-Ahmed- Called Jessica Collins ((516) 220-2143) at Roux Associates and left a voice mail requesting call back. 6/12/15-Ahmed- Spoke to Jessica. as per her, they were doing some drilling to characterize the waste for disposal for the future excavation on the site during development. The drill machine hit something which created a leakage in the motor oil tank. Approx 1 gallon spilled on grassy soil. They immediately scooped out the contaminated soil and put it in a plastic bag and took it out of the site for disposal. ROUX took some pictures before and after the cleanup. Spill closed."
Remarks: "A vehicle hit a stump rupturing the oil tank. The clean up is complete."

DEC Memo: "10/26/16-Zhune spoke to Rachel from, Rox Associates. Rachel said this site is in the Voluntary Cleanup program. While installing supports for the excavation, a machine failure resulted in a 2 gallon release of hydraulic fluid onto the soil in an area that is plan to be excavated. Contractor (American Pile) cleaned the spill. 10/26/16 Rachel Henke from Rox Associates sent the following email: At 16:45 on 10/25/2016, there was a minor release of hydraulic fluid from the tieback drill rig at a construction site located 5 Bay Street, Staten Island, NY. While installing the support of excavation, there was a failure in a line of the tieback drill rig causing approximately 2 gallons of hydraulic fluid to spill onto the soil. The spill was immediately cleaned up by the contractor onsite (American Pile) using oil absorbent pads. The spill occurred in an area that was already

Spiller Company: CONTRACTOR
Spiller Address: 5 BAY ST
Spiller Company: 999
Contact Name: JESSICA COLLINS
DEC Memo: "9/28/16 TJD Teleconference with Jessica Collins at Roux Associates - she states the reported discharge was associated with leaking construction equipment (mud puppy). The equipment was being moved at time of incident and has a 100 gallon fuel tank that was near empty during the movement. A hose on the equipment was compromised during the move causing less than 5 gallon of diesel spill to be spilled onto surrounding soils. Remaining fuel was immediately removed from the equipment and absorbent pads were utilized to recover liquids. Contaminated soils estimated at less than 1/2 cu yds were over-excavated to a clean endpoint based upon visual/olfactory inspection. The material is staged onsite pending transportation and offsite disposal at Bayshore disposal facility in NJ. The construction site is a NYC OER project in the VCP program. The spill area is to be excavated for disposal due to low level metal contamination under NYCOER oversight. Due to the nature of reported event and remedial actions taken there is no further action required. Jessica has been advised to maintain a copy of disposal manifest with the project records. Spill closed."
Remarks: "under 5 gallons lost to soil, contained, soil on plastic"

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ENGELHARDT DEC INSPECTOR'S NOTES Source identified as leaking sample valve on transformer. Leak stoped but unknown date. Cleaned with degreaser, excavated soil and bluestone. Not noted if servers was affected. Only historical sampleing, no new oil sample, no post excavation samples. Concrete, soil and bluestone impacted. CON ED E2MIS REPORT 1-26-99 1340hrs. 1/2gal. dielectric oil spill from valve of main tank of transformer #2 at Port Richmond Substation. Chem Lab employee was on location taking oil samples causing the spill to occur onto the cement pad and soil. Absorbent pads were placed to contain spill. Company records indicates the oil to contain 246ppm PCb's as per Chem Lab Seq# 92-00204. 1455hrs. Cleanup operations at Port Richmond Substaion have been completed. An area of concrete beneath the transformer approx. 4'x2' was cleaned and scrubbed using citrus cleaner. Also an area of Bluestone and some soil approx.2'x6 x6 deep was shoveled out and removed and replaced with new bluestone. Plastic lining was placed beneath the newly installed bluestone. All oil impacted soil and stone was placed inot a 55gal. drum and removed to Travis Ave. yard for disposal according to company procedures. 2-01-01 main tank valve of transformer #2 at Port Richmnod Substation has since been rpaired."

S102240020

sediment was removed and 2 ft of clean sand was placed on top of the dredged area. Correspondence dated 8/12/2002 indicates that the source may be spill 9102859, two #6 fuel oil tanks. Spill 9102859 was closed 7/11/95 by K.Tang. Fingerprinting (see July 26, 2002 correspondence) indicates that this oil is a combination of weathered #6 fuel oil, lube/motor/and/or hydraulic oil, and natural organic matter. Sampling completed prior to dredging indicated that free phase product was found from 5-11 feet depth, and that an oily sheen was present to a depth of 18 feet. 5/10/06: Spoke to Gene Peck of URS (212-609-8097), he will get a permit to visit the site with us. Spoke to Raj Patel of NYSDOT (212-487-5677), we should let him know when we are coming. 5/30/06: Left voice message for Gene Peck to followup on permit aquisition. 8/10/06: Spoke with Gene Peck. He will send a letter summarizing work that was done out there. 9/7/06: Spoke with Gene Peck. He got approval to compose a remediation summary letter. He will submit it soon. 10/6/06: Left a message with Gene Peck to followup on remedation summary letter. 10/24/06: Left message with Gene Peck to followup on summary letter. 11/13/06: Left message with Gene Peck to followup on summary letter. 12/11/06: Left message with Gene Peck to followup on status of summary letter. 1/2/06: Sent letter to Sakti Nandi of NYCDOT and Eugene Peck of URS requesting a remedial action report, due 2/16/07. 3/27/07: New contact at DOT is Raj Patel (phone 212 487 5677, fax 212 487 8305). Faxed letter to Raj Patel requiring a remedial action report by 5/8/07. 5/10/07: Spoke to Raj Patel. He did not receive letter. Resent letter via mail and fax. 5/23/07: Received phone message from Raj Patel. He is waiting for a report from his consultant. 7/12/07: Received phone call from Gene Peck (212-609-8097). A final report was prepared. He will look for it in the file. A new spill number was opened during dredging (0500945), which was subsequently closed. 8/15/07: Spoke to Raj Patel. A report is in preparation. 9/17/07: Left message with secretary for Raj Patel. 9/21/07: Spoke to Raj Patel. Report in preparation. 11/20/07: Received a letter summary report from Gene Peck of URS. (Sun) 3/17/08: Received report. Under review. 4/28/08: Send letter requiring a landside investigation, proposed in the February 12, 2003 proposed sampling plan. An additional boring to the east of the former USTs is required. 7/30/08 - Carlson: Received phone message from Raj Patel (212-487-5677). They are hiring MacLaren to do the work. Paperwork is still going through. 8/19/08 - Carlson: Spoke to someone from the NYC transit. She will send a letter requesting an extension to May 2009. 4/8/09 - Carlson: Spoke to Mark Godeck at AKRF (914-922-2356). He will submit a revised workplan. 4/30/09 - Carlson: Received Subsurface Investigation workplan dated 4/24/09. Approved workplan for installation of 10 soil borings and 4 monitoring wells. 4/2/2010 - Carlson: Received followup email from McLaren engineering inquiring about site status. 10/9/15 - Raphael Ketani. I restarted the spill case. I reviewed the AKRF July 2009 Site Investigation Report dated 7/17/09. According to the report, from 1950 to 1991, the heating system for the terminal was fueled by #6 oil. The fuel was stored in two 15000 gallon USTs near Slip 3. One of the USTs leaked and spill number 9102859 was called in. The spill was remediated by excavation of the contaminated soil and by a pump and treat system. This spill was closed on 7/11/95. During 2001, soil borings were performed to characterize the off shore slip sediments for dredging. Petroleum contamination was seen in the sediments and spill number 0230023 was called in on 8/28/02. During June 2002, additional soil borings were conducted from the proposed dredging area and more oil

contaminated sediment was found. During February 2003, URS submitted a sampling work plan in order to determine the source of the contamination. They concluded that the source was the former UST next to Slip 3. Dredging took place from April to June of 2005. The November 2007 report by URS concluded that there still was contaminated sediment. Extensive restorations to the terminal took place during 2005. The former UST area was located under the concrete deck located in a service area below the terminal. Between May 26 and June 8, 2009, more borings and wells were installed. The borings were SB-1 to SB-9 and generally went down to 20 feet bgs. Groundwater was found at 8.5 feet bgs. Two soil samples were taken from each boring. Wells MW-1 to MW-4 were installed at SB-1 to SB-4. The subsurface material was found to consist of fill from 14 feet to 18 feet bgs and was followed by organic silt. VOC vapors were detected with a PID meter at SB-1, 2, 5, 8 and 9 from 0.1 ppm to 6.5 ppm. Pieces of wood were found in the fill which were permeated by creosote. The water table was found to be at 0.92 feet to 1.37 feet below the working grade. Petroleum odors were noticed at MW-1 to MW-4 and a sheen was seen at MW-4. The soil samples were collected from 5/26/09 to 5/29/09. The VOC analytical results for all of the samples were either entirely non-detect or almost entirely non-detect. Most of the SVOC analytes were detected in all of the samples, but the results were almost entirely below the CP-51 unrestricted residential standards and the naphthalene hits were well below the standard. The groundwater samples were collected on 6/8/09. The VOC results for all of the samples were either entirely non-detect or almost entirely non-detect. This held true for the SVOC analyses as well. Based upon the information in the case file, I determined that residual contamination in the sediment and the groundwater was not a threat to the public or the environment. Therefore, I closed the spill case effective today. "

Remarks:

"SEDIMENT CONTAMINATION IDENTIFIED DURING DREGDING ASSESSMENT."

VOUGHT 5/24/00 Email from Joe Rennie, Tyree . . . As per the above
referenced site, we recently installed on-site monitoring wells as
dictated by the end point analytical soil results from the tank
removal project conducted in June 1998. With respect to the
monitoring of these well, I just wanted to let you know that my M&B
technician called me at 3:30PM and told me that free product was
present in one (1) monitoring well. Tyree has dispatched our vac

S103238890

truck to the site to retrieve this product. In addition, maintenance has also been dispatched to check the tank/line system and alarms. Also we will have a crew on-site to excavate, if necessary, to the problem area. We have scheduled to have a tank and line test either for tomorrow afternoon or Friday. We believe that we have not compromised a line, but it may be probable that an overspill occurred at the site during a fuel delivery. This will have to be confirmed in our investigation. I will have all the specifics in a spill report to you. Any questions, please call me. 5/25/00 As per Joe Rennie, the tanks and piping are double walled tanks. They checked the institial space and all probes and everything is working properly. They found product in the spill containment bucket for the direct drop. Tyree is proposing that the gas traveled from the spill bucket to well #3 along an electrical conduit? Tyree will submit additional information to support this theory. M&B bailed 3.5 gallons out of the well. Vac truck went next day and encountered only 3 in MW3. The well was vaced out and very slow recharge was observed. 3/14/03 REASSIGNED FROM ROMMEL TO VOUGHT. 08/31/2005 - Feng - Project transferred from Vought to Feng. 10/31/2005 - Feng - Quarterly Monitoring Report, 6/2005 - 8/2005. 6 monitoring wells onsite, groundwater flows to north (tidal) at depth of 8.5' to 9.01' below grade. no free product detected this quarter. Passive bailer in W-3 which was very low recharge rate, total of 33.5 gallons of product have been removed. All concentration in ppp. W-1, seems increasing, 54 BTEX. W-2, increasing/fluctuating, 947 BTEX. W-3, very high in both BTEX and MTBE and product present most of the time, 103,370 BTEX and 36,500 MTBE. W-4, slowly decreasing/fluctuating, not accessible this quarter, 9,148 BTEX (5/11/05) and 978 MTBE (5/11/05). W-5, low/increasing, 91 BTEX and 5 MTBE. W-6, below MDL most of the time, 15 BTEX. 11/28/2005 - Feng - STIP sent to Getty Properties with request of propose of RAP since no more wells could be drilled due to Kill Van Kull Waterway nearby and groundwater flows toward it. CC to Tyree and Delta. STIP due 12/28/2005. 2/17/2006 - Feng - on 2/9/2006 Received signed STIP with modified CAP. (RJF) 3/20/2006 - Feng - STIP executed on 3/15/2006 by DEC Lou Oliva. Hardcopy to Kevin Shea and CC to Paul Lindell, Paul Hatcher and Joe Rennie. Remind them that the RAP should be submitted by 7/18/2006. (RJF) 3/28/2006 - Feng - Quarterly Monitoring Report, 12/2005 - 2/2006. The site is an active gasoline/service station. 6 monitoring wells onsite. Groundwater flows to north and also tidally influenced. Groundwater depth at 7.44' to 10.01' bg. W-1, 4 ppb BTEX, MTBE ND. W-2, decreased and 654 ppb BTEX, 5 ppb MTBE. W-3, free product, trace, passive bailer, no FP has been reocvered this quarter, 33.5 gallons of product has been recovered to date. W-4, decreased and 7,362 ppb BTEX, decreased and 435 ppb MTBE. W-5, decreased and 74 ppb BTEX, 51 ppb MTBE. W-6, 12 ppb BTEX, MTBE ND. (RJF) 5/1/2006 - Feng - Reviewed the RAP submitted by Tyree, dated 4/24/2006. The site is highly impermeable. Tyree has been conducted a mini DPE pilot test that 10 inches Hg of vacuum was not sufficient to influence a 35' distance. Tyree recommended: 1) Determine, through surveying, sea level and service station grade. 2) Determine if the underlying water is either perched or is true groundwater. 3) Determine if the water table fluctuation at the site is produced by seasonal changes or if it is tidally influenced. 4) Determine residual hydrocarbon impacets by collecting soil samples in the source area. 5) Conduct EVFR on W-3. A solid PVC stiger pipe should be located 1 or 2 above the LNAPL/groundwater interface. The stinger depth should be adjusted to max product recovery. The liquid should

Map ID

Distance
Elevation

MAP FINDINGS

Site

Database(s)

EDR ID Number
EPA ID Number

1125 RICHMOND TERRACE (Continued)

S103238890

be observed through a clear pipe located at the well head. When the LNAPL has been removed, efforts to remove groundwater at the water table interface should continue. 6) If impacted water is perched, conduct weekly EVFR. 7) If impacted water is groundwater, a tidal study should be conducted, install piezometer wells, and repeat a DPE pilot test using a higher vacuum level. 5/31/2006 - Feng - Approved RAP during the meeting with Tyree and Delta on 5/18/2006. Tyree mentioned that a month may need to complete the further investigation and then remedy design will submit based on the investigation result. Approval letter to Getty Properties and cc to Tyree and Delta. (RJF) 6/28/2006 - Feng - Quarterly Monitoring Report, 3/2006 - 5/2006. The site is active gasoline/service station. As of sampling on 5/15/2006, groundwater flows to north at depth of 5.67' to 10.15' bg and it is tidally influenced. 6 monitoring wells onsite. W-1, both ND. W-2, 10 ppb BTEX, MTBE ND. W-3, 0.20' Free product, passive bailer in well, the recharge rate is very slow, 0.25 gallons of FP has been removed this period and total of 33.75 gallons has removed to date. W-4, 7,140 ppb BTEX (327 ppb B, 186 ppb T, 387 ppb E, 6,240 ppb X), 250 ppb MTBE. W-5, 50 ppb BTEX, 59 ppb MTBE. W-6, both ND. (RJF) 9/11/2006 - Feng - Quarterly Monitoring Report, 6/2006 - 8/2006, by Tyree. The site is active gasoline/service station. Gauged and Sampled on 8/16/2006. Groundwater flows to north and it is tidally influenced. Groundwater depth at 8.14' to 12.09' bg. 6 monitoring wells. W-1, 59 ppb BTEX, MTBE ND. W-2, 635 ppb BTEX, MTBE ND. W-3, 0.04' free product. W-4, 10,805 ppb BTEX (455 ppb B, 337 ppb T, 393 ppb E, 9,620 ppb X), 604 ppb MTBE. W-5, 34 ppb BTEX, 39 ppb MTBE. W-6, 317 ppb BTEX, MTBE ND. Passive bailer in W-3, very low recharge rate. 0.25 gallons of product removed this quarter, 34 gallons removed to date. (RJF) 11/22/2006 - Feng - Quarterly Monitoring Report, 9/2006 - 10/2006, 11/10/2006, by Tyree. Active gasoline/service station. Groundwater sampled and gauged 11/3/2006. 6 monitoring wells. DTW 6.83' to 8.35' bg. Flow direction north (tidally influenced). LNAPL in MW-3. BTEX range ND to 9,105 ppb (MW-4). MTBE range ND to 113 ppb (MW-4). Passive bailer in MW-3, very low recharge rate, 0.25 gallons of product recovered this period, 34.25 gallons product recovered to date. (RJF) 1/18/2007 - Feng - Getty Properties portfolio meeting with Tyree and Delta. No pilot test has performed. Passive bailer in W-3. Tyree will check the previously submitted RAP. (RJF) 7/9/2007 - Feng - Quarterly Monitoring Report, 3/2007 - 5/2007, 5/2007. Groundwater sampled 5/9/2007. 6 monitoring wells. DTW 7.78' to 11.84' bg. Flows to north (tidally influenced). LNAPL in W-3 (1.01'). W-1, ND. W-2, 392 ppb BTEX, MTBE ND. W-3, 1.01 feet of LNAPL. W-4, 2,373 ppb BTEX, MTBE ND. W-5, 11 ppb BTEX, MTBE ND. W-6, ND. Passive bailer in W-3, 5 gallons of product removed this quarter and 39.50 gallons of product removed to date. (RJF) 11/8/2007 - Feng - Portfolio meeting with Delta and Tyree. 3 additional wells installed, SIR will be submitted by mid 12/2008. Tyree will conduct pilot test this month. Pilot test data and RAP will be submitted by mid 1/2008. (RJF) 1/24/2008 - Feng - Quarterly Monitoring Report, 6/2007 - 8/2007, 10/2007. Active gasoline service station. Groundwater gauged and sampled 8/17/2007. 6 monitoring wells. DTW 7.28' to 10.33' bg. Flows to north (tidally influenced). LNAPL in W-3 (0.04'). BTEX range ND to 4,723 ppb (W-4). MTBE range ND to 82.3 ppb (W-4). Passive bailer in W-3, 2 gallons were removed this quarter. EFR conducted on 6/27/2007, 7/9/2007, and 8/17/2007. A total of 87, 200 and 204 gallons were removed respectively. (RJF) 1/31/2008 - Feng - Reviewed the Subsurface

1125 RICHMOND TERRACE (Continued)

S103238890

Investigation Report, 12/6/2007. On 10/26/2007, Tyree has installed three 2-inch monitoring wells, MW-7, MW-8 and MW-9 using GeoProbe hollow stem augers. MW-7, 20 feet with 15 feet of 0.02 slot screen. MW-8, 10 feet screen and 4 feet riser. MW-9, 10 feet screen and 5 feet riser. 2 soil samples were collected from each soil boring. High level contamination in W-8 (5'-10'), 310 ppb Benzene, 78,600 ppb Ethylbenzene, 49,400 ppb Toluene, 585,000 ppb total Xylene. No exceedances were detected in other samples. Quarterly Monitoring Report, 9/2007 - 11/2007, 12/2007. Active gasoline station. Groundwater gauged and sampled 11/16/2007. 9 monitoring wells. DTW 7.19' to 9.79' bg. Flows to north (tidal). LNAPL in MW-3 and MW-8 (1.19'). BTEX range ND to 35,840 ppb (MW-9). MTBE range ND to 7,450 ppb (MW-9). Passive bailer in MW-3. EFR events conducted on 8/30/2007, 9/17/2007. A total of 200 and 150 gallons were removed respectively. Emailed to Tyree for additional delineation of the west portion due the high level of contamination in MW-9, and immediate product recovery activities. (RJF) 2/4/2008 - Feng - Letter to K. Shea (Getty Properties) requiring further delineation of the west and northwest portion of the site, and the immediate product recovery. Investigation result report due 4/14/2008. (RJF) 3/20/2008 - Feng - Email to Tyree and Delta for status of pilot test and remedial design. (RJF) 5/15/2008 - Feng - Quarterly Monitoring Report, 12/2007 - 3/2008, 3/2008. Active gasoline service station. Groundwater was gauged and sampled 3/3/2008. 9 monitoring wells. DTW 7.17' to 9.81' bg. Flows to north. LNAPL in MW-3 and MW-8 (0.95'). BTEX range ND to 19,930 ppb (MW-9). MTBE range ND to 791 ppb (MW-9). Passive bailer lost in MW-3 and recovery being rescheduled. Dual phase pilot test conducted on MW-3 on 12/13/2007, total of 95 gallons gasoline/water mixture removed. 240-gallon Lube Cube was removed on 3/22/2008. (RJF) 7/1/2008 - Reviewed Subsurface Investigation Report, dated May 2008, by Tyree. On 3/27/2008, Tyree installed 2 monitoring wells, W-10 and W-11. 2-inch PVC, 0.02 slot screen interval 5 feet to 20 feet. Riser interval at 0 to 5 feet. Soil was screened by PID, no readings. 4 soil samples were taken, results show no exceedance. Groundwater was encountered at 9 feet. 2 groundwater samples were collected and results show no exceedance. 2Q2008, 4/2008 - 6/2008, 6/2008. Active gasoline station. Groundwater was gauged and sampled 5/5/2008. 11 monitoring wells. DTW 7.36' to 9.20' bg. Flows to north (tidally influenced). LNAPL in W-3 and W-8 (0.65'). BTEX range ND to 7,333 ppb (W-9). MTBE range ND to 701 ppb (W-9). Letter to K. Shea (Getty Properties) approving delineation and requiring a RAP by 9/1/2008. (RJF) 9/4/2008 - Getty Properties portfolio meeting with Tyree and Delta. No tidal study has been done. The water is just against the property. Need to fish the bailer. The RAP is sent, pilot study of dual phase is complete. Will do a tidal study by the end of 2008. (RJF) 10/9/2008 - email from Jennifer Kotch (Tyree). The tidal study is scheduled for next two weeks. (RJF) 12/1/2008 - 3Q2008, 6/2008 - 8/2008, 8/2008, by Tyree. Active gasoline station. Groundwater was gauged and sampled 8/14/2008. 11 monitoring wells. LNAPL in MW-3 (0.36') and MW-8 (0.36'). DTW 8.06' to 9.87' bg. Flows to north. BTEX range ND to 18,930 ppb (MW-9). MTBE range ND to 654 ppb (MW-9). (RJF) 12/1/2008 - Reviewed Pilot Test and Remedial Action Plan (RAP) dated 9/2008, submitted by Tyree. Pilot test determined the ROI for liquid phase 10 feet, SVE test 37 feet. Tyree proposed to install a Dual Phase Extraction system. DEC disapproved the RAP and required: 1) soil and groundwater delineation maps, 2) install new extraction wells instead connecting the existing monitoring wells to the system,

S103238890

3) description of the vapor phase treatment as part of the system, 4) collect effluent groundwater, 5) OM&M plan. Revised RAP due 12/30/2008. (RJF) 1/6/2009 - Getty Properties portfolio meeting with Tyree and Delta. Revised RAP extended to 2/2009. (RJF) 5/7/2009 - Quarterly Monitoring Report, 9/2008 - 12/2008, 12/2008, by Tyree. Active gasoline service station. Groundwater was gauged and sampled 11/4/2008. 11 monitoring wells. LNAPL in W-3 (0.11'), and W-8 (0.24'). DTW 8.33' to 10.26' bg. Flows to north. BTEX range ND to 18,480 ppb (W-9). MTBE range ND to 1,050 ppb (W-9). Passive bailer in W-3. On 9/10/2008, 1 gallon of product bailed. On 10/23/2008, 1.5 gallons product bailed. Total of 47 gallons of product bailed. A 240-gallon lube cube tank was removed on 3/21/2008. (RJF) 9/1/2009 - Quarterly Monitoring Report, 1/2009 - 3/2009, 4/2009, by Tyree, pdf via email 7/2/2009. Active gasoline service station. 11 monitoring wells. Monthly gauging on 1/14/2009, 2/23/2009 and 3/27/2009. quarterly sampled on 2/23/2009. DTW 8.11' to 10.71' bg. Flows to north (tidal). LNAPL in W-3 (0.01') and W-8 (0.02'). BTEX range ND to 5,251 ppb (W-4). MTBE range ND to 1,150 ppb (W-9). Passive bailer in W-3, 1/2 gallon water/product was removed. On 11/18/2008, 1 gallon of product was bailed. On 12/24/2008, 1.5 gallons was bailed. On 1/23/2009, 1 gallon was bailed. Total of 50.5 gallons product was bailed. (RJF) 9/23/2009 - Reviewed Excavation Work Plan, dated March 20, 2009, via email on 7/15/2009 by Tyree. Tyree proposes 2 limited excavation in the W-3, W-4 and W-8 area and the W-9 area, down to water table and endpoint samples will be collected. RegenOx/ORC will be applied in the open excavation before backfill. The wells being destroyed will be replaced and monitored. Comments to Tyree. see eDoc. (RJF) 2/22/2010 - Reviewed Revised Excavation Work Plan, dated 9/30/2009, by Tyree. Tyree will excavate the former tank field area and also the area of W-3 and W-9 between the canopy and the station building. The wells that destroy during the excavation will be replaced. and 3 more wells will be installed outside the excavation. DEC comments: 1) whether safe to excavation between W-3 and W-9 by just sloping, check the 2K Gas tank still there, and move one of the monitoring well to the right side of the canopy since proposed W-12 and W-13 are close. 2/24/2010 - meeting with Delta and Tyree. They may put trench box in between the building and canopy and they will discuss with the contractors. Tyree will check the 2K Gas tank, and will move W-13 to the right side of the canopy. Revised RAP 6/2010. (RJF) 2/1/2012 Getty portfolio transferred to KGH. 3/14/2013 KGH meets with Tyree/Getty to discuss remedial progress on various sites. KGH agrees to review files and consider closure of select cases. 10/12/2013 - KGH meets with Getty Tyree in Latham office. PM Warner proposes exit strategy based on declining trend on-site. 3/23/2015 - On behalf of Getty Realty Corp. (Getty), Tyree Environmental Corp. (Tyree) is submitting this letter to request closure for NYSDEC spill number 98-03348, for Getty Service Station # 00234, located at 1125-27 Richmond Terrace, Staten Island, New York. The attached quarterly monitoring report contains a site history and summary of remedial activities conducted at the project site, along with historical data tables and site figures with current data. 4/7/2015 - The Department has reviewed the case file and accepts Getty's Petition for Closure. No Further Action is Required by the Department. NFA. KGH. "

DEC Memo:

"Need more information. 7/23/2007 Tyree says gasoline/diesel mix in sump was cleaned....no mention what may have caused it or what can be done to prevent it in the future. 7/8/2008 Submittal from Tyree says: On June 13, 2007 it was noted that there was water with a sheen noted in the diesel and gasoline tank top sumps. The water appears to be the result of storm water runoff that had accumulated in the tank top sumps. The NYSDEC was immediately notified and spill No. 07-03023 was assigned to the site. On June 14, 2007 Tyree Environmental Corporation (Tyree) was notified of the incident and a vacuum truck was dispatched to the site. A total of approximately 31 gallons of water was pumped out of tank top sumps. A copy of the waste manifest is included with this report. The tank top sumps are contained as such there was no impact to the subsurface. A review of the statistical inventory reconciliation records was conducted. The review of the records for the months of May through July 2007

DEC Memo: "Employee discovered a mixture of oil and water (approx. 20 gallons) on top of water within the manhole. No sewers or waterways involved. He was unable to determine whether or not the leak originated from the cable in the manhole. Spill is contained in the manhole. A sample was taken and is being submitted to the Chem Lab for analysis. Cleanup is pending awaiting sample results. 10/13/04 ... 1330 hrs. UPDATE... Actual approx. amount of oil/water mix is 1 pt. of unknown oil in 20 gallons of water in manhole # 37 on Bay St. & Richmond

MANHOLE #37 (Continued)

S106721198

Terrace....TB 10/25/04 1553 hrs.....UPDATE: Received copy of lab analysis on 10/14/04. Results showed oil contained less than 1 ppm PCB (LSN04-08329-001) and oil ID indicated the presence of a cable oil (LSN 04-08330-001). Contractor Clean Venture was summoned to perform cleanup of the manhole on 10/20/04. All the oily water and sludge/debris was removed from the manhole. The sidewalls and bottom of the manhole was then flushed cleaned with water. As a result of this cleanup, a total of 350 gal of oily water mixed with debris was generated. It was shipped to Cycle Chem located at Elizabeth, NJ for disposal as non-hazardous waste. Cleanup completed on 10/20/04 at 1300 hrs."

Remarks: "NO TO 5 QUESTIONS; CLEAN UP PENDING RESULTS: CONED # 155808"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact Name: MARTIN WESOLOWSKI
DEC Memo: "8/5/2009 Sangesland spoke to Martin at Liro Engineering. He said the tank was pulled and the bad soil was removed yesterday & today. They'll take end point samples today and send in for lab testing. A complete report will be sent to DEC within 2-3 weeks. 9/22/09 - Raphael Ketani. The site is the 120th Precinct at 78 Richmond Terrace, Staten Island. The spill was called in on 7/29/09 and consisted of pulling a 4,000 gal. gas tank. Contaminated soil was found and the soil was supposedly removed. The PBS registration is #2-217212. Eight tanks are listed. Five tanks were closed between 5/1/03 and 6/6/03. These were two 275 gal. tanks and three 550 gal. tanks. The 4,000 gal. tank is #003 and is still listed as active. Otherwise, there are two active tanks left, a 5,000 gal. (#004) and a 550 gal. (#005), both with #2 oil. I hadn't heard anything from the consultant, Martin Wesolowski of LIRO Engineers (718) 321-3136, ext 242/(347) 672-5434. So I tried to contact him, but could only leave a message that the DEC had not received the remediation report, and that the 4,000 gal. tank is still listed as active and that this is a violation. 9/23/09 - Raphael Ketani. Mr. Wesolowski called me today. He said that he is presently working on the closure report and it will go out sometime this week. He also stated that the revised PBS registration was given to the police department and that they will sign it. 9/28/09 - Raphael Ketani. Today I received the Underground Storage Tank Closure Report dated September 25, 2009 from LiRo Engineers Inc. I began my review. There was free product in the concrete vault despite the 4,000 gal. tank appearing to be in good condition. The tank was cleaned out and was disposed of, along with the associated piping, as scrap metal. Contaminated soil was removed. End points were taken along the trace of the length of the tank and from the sidewalls. Some contaminants were found to exceed TAGM at BS-1 and Bottom #1. The excavation went to 14.5 feet below grade, which was the maximum safe depth for the type of shoring that was being used. Groundwater is at 20 feet below grade. The LiRo

consultants recommend doing more soil excavation and taking a groundwater sample. I concur with the recommendation. 10/1/09 - Raphael Ketani. I drafted a review letter for the approval of Randall Austin, Chief of the Spills Unit. The letter recommended further soil investigation and the taking of a groundwater sample. Mr. Austin approved the letter and it was sent out today. 11/5/09 - Raphael Ketani. I tried to contact Mr. Wesolowski of LIRO Engineers (718) 321-3136, ext 242/(347) 672-5434, but could only leave a voice mail. 11/6/09 - Raphael Ketani. Mr. Wesolowski returned my call and said that he had sent all of the paper work to the NYC DDC and that he is waiting for word that he can proceed with the soil investigation. 11/13/09 - Raphael Ketani. Mr. Wesolowski sent me a FAXed letter dated 11/13/09 stating that LiRo is providing an update regarding the case. The letter stated that the NYCDDC is in the process of awarding LiRo a new remediation contract. The site will be included in the contract. After the contract is awarded, LiRo will conduct the investigation. 12/23/09 - Raphael Ketani. I tried to contact Mr. Wesolowski (718) 321-3136, ext 242/(347) 672-5434, but could only leave a message requesting an update regarding the case. 12/28/09 - Raphael Ketani. Mr. Wesolowski called me back. He said that LiRo is still waiting for the contract to be awarded. 1/25/10 - Raphael Ketani. I called Mr. Wesolowski. He said that the contract was registered today. So LiRo has a contract with the DDC. A meeting regarding the site will take place next week. Then the work will start again. 2/10/10 - Raphael Ketani. I spoke to Mr. Wesolowski (718) 321-3136, ext 242/(347) 672-5434. He said that they are now getting all of their contractors and the laboratory coordinated for the project. Mr. Wesolowski expects to start the work sometime in March 2010. 4/1/10 - Raphael Ketani. I tried to contact Mr. Wesolowski, but could only leave a message. 4/2/10 - Raphael Ketani. I tried to contact Mr. Wesolowski, but could only leave a message. 4/5/10 - Raphael Ketani. I spoke to Mr. Wesolowski. He said that LIRO is developing the work plan and that it will be sent to DEC next week. The contractors are going to submit their bids to the City and go through the VENDEX approval process. This takes some time. So he estimates that work will not start until about 6 weeks from now. 5/10/10 - Raphael Ketani. Mr. Wesolowski called to state that the DEC should receive the work plan soon. 5/11/10 - Raphael Ketani. I received the May 2010 Site Specific Investigation Plan and began my review. I finished my review of the SSIP. The only comments I had were that all samples should be tested via methods 8260B and 8270C and compared to TAGM 4046 standards. Also, the 8/6/09 soil sample results indicate that the contamination almost entirely meets the TAGM soil standards. I sent an e-mail to Mr. Wesolowski with my comments. 6/11/10 - Raphael Ketani. Mr. Wesolowski sent me an e-mail stating that the drilling will resume on June 17. 7/15/10 - Raphael Ketani. I spoke to Mr. Wesolowski (718) 321-3136, ext 242/(347) 672-5434. He said that the drilling has been completed. An investigation report was generated. Mr. Wesolowski will get me a copy of the report. I asked him whether anyone had ever noticed any soil contamination from the tanks that had been closed in place. He said that contamination has never been seen from these tanks. Mr. Wesolowski called me back. He said that the drilling definitely was completed and the wells were developed. Samples will be collected soon. A report will be submitted to DEC at the end of August or in September. He said that he is involved in tank work only. So this part of the project is being handled by Steve Frank (ext 236) of LiRo

S103275005

Engineers, Inc. Mr. Wesolowski transferred me to Mr. Frank. I spoke to Mr. Frank. He said that they are following a protocol for the safe development and proper sampling of the groundwater wells. He said that he will handle the project from this point onward. 12/6/10 - Raphael Ketani. I tried to contact Mr. Frank (718) 321-3136, ext 236 of LiRo Engineers, but could only leave a message. Mr. Frank called me back. He said that the report was completed. It is currently being reviewed. If the report is found to be acceptable, then the DEC will have it by the end of this week. 12/10/10 - Raphael Ketani. Mr. Frank sent me the 12/7/10 Investigation Summary and Supplemental Investigation Remediation Plan. 12/14/10 - Raphael Ketani. I finished my review of the ISSIRP. Only the samples from LMW-1 (11.5' to 12.5') and from LMW-2 (13.5' to 14.5') showed high analyte concentrations. The analytes concentrations were roughly three and two times the TAGM limits, respectively. The analytes of concern were 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, and total xylenes. In the report (plan), LiRo recommended performing six more soil borings (LSB-04 to LSB-09) near LMW-1 and LMW-2 in order to delineate the extent of the contamination. They also suggest two additional rounds of groundwater monitoring. I agreed with the proposal and sent Mr. Frank an e-mail to this effect. I also stated in the e-mail that the DEC was requesting that a boring be performed to the southwest (below on the diagram) of LMW-1. I added that the proposed borings seem a little far from the contamination hot-spots (LMW-1 and LMW-2) - 10 feet or more. I suggested placing the borings about 5 or 6 feet from the hot-spots. Lastly, I asked whether the contamination can be dug out at these hot-spots. If not (for whatever reason), then soil treatment and groundwater monitoring will need to take place. 12/15/10 - Raphael Ketani. Today, I received the hard copy version of the 12/7/10 Investigation Summary and Supplemental Investigation Remediation Plan. The date on the hard copy is 12/13/10 and it included Table 5, the groundwater results. 3/14/11 - Raphael Ketani. I tried to contact Mr. Frank (718) 321-3136, ext 236 of LiRo Engineers, but could only leave a message. Mr. Frank called me back and left a message. He said that the additional drilling will take place on March 23. A report will be submitted to the DEC about 20 days after getting the analytical results back from this part of the investigation and remediation work. 3/23/11 - Raphael Ketani. Mr. Frank sent me an e-mail stating that the work will start place on March 28. 6/7/11 - Raphael Ketani. I spoke to Mr. Frank (718) 321-3136, ext 236 regarding the submission of the report for the additional work and sampling. He said that the DEC will receive the report in about 3 weeks. He said that he saw that a draft report was in progress. 7/8/11 - Raphael Ketani. Mr. Frank sent me the following e-mail along with Drawing 3 dated 6/21/11: I attached a summary of the soil sample results from the additional borings that we did, and as you can see, the VOC levels were quite high. Based on these results, the soil contamination is too deep and too wide-spread to remove by excavation. Our report has been delayed because we are incorporating additional delineation borings and an SVE pilot test plan into the report. It will be ready to send to you next week. Drawing 3 showed very high TVOC concentrations at borings LSB 5 to 8 and 10 which were taken from 3/29/11 to 3/31/11. The TVOC concentrations were in the hundreds of thousands of parts per billion within the interval from 8 to 16 feet down. The highest concentration was 716,800 ppb. TSVOC concentrations were not significant. I wrote back that LiRo should possibly try in situ soil treatment solution

S103275005

injections. 7/19/11 - Raphael Ketani. Mr. Frank sent me the LiRo Engineering 7/12/11 Supplemental Investigation Letter Report. As in the 7/8/11 e-mail from Mr. Frank, LSB 5 to 8 and 10 had TVOC results in the hundreds of thousands of parts per billion at the 8 to 16 feet level. TSVOC results were not significant. Groundwater was at about 24 feet below grade (according to the boring logs) and there was no contamination. In the report, LiRo proposes doing more well installations and contingency boring installations to better define the contamination. A VOC vapor extraction pilot test is also proposed. A round of groundwater sampling will take place. 7/20/11 - Raphael Ketani. I spoke to Mr. Frank (718) 321-3136, ext 236 and told him that the DEC was accepting the SILR. However, we had a lot of questions about the proposed SVE pilot test. I asked him where the screened interval would be. He said that the screens would be above the water table and would span the dry sand. I also asked whether the hydraulic conductivity of the sand was low, or medium, or high. I told him I was asking this because the recovery in the split spoons for some of the sampling intervals was high. Mr. Frank said that he didn't remember the recovery being so high in some places. I also commented that LSB-17 and LSB-19 were by themselves and that this well may not be enough to efficiently collect the vapors. He said that the radius of influence was supposed to be 25 feet. I suggested that maybe air sparging would be a better idea. Mr. Frank said that he will go back to the design engineer and see whether changes need to be made. I asked Mr. Frank to send DEC an addendum to the SILR concerning just the SVE pilot test proposal. He said that he will. 7/26/11 - Raphael Ketani. Mr. Frank sent me the 7/25/11 Modification to Soil Vapor Extraction Pilot Test by e-mail. I reviewed the work plan. Borings LSB-12, 13, 16 to 19 will be converted to wells and used for the testing. Individual pilot tests will be conducted at LSB-12, 14, and 17. A vacuum truck will be used to apply vacuum to each well in turn. The vacuum will be increased at timed intervals until the amount of vapor flow diminishes. I found the plan to be acceptable and I responded by e-mail that they should commence with the work. 9/15/11 - Raphael Ketani. I tried to contact Mr. Frank (718) 321-3136, ext 236 (Steve) regarding progress at the site, but I could only leave a voice message. 9/23/11 - Raphael Ketani. Mr. Frank left me a voice message. He said that LIRO was presently receiving the soil analyticals. The amount of contamination turned out to be much more than was previously estimated. 10/19/11 - Raphael Ketani. I tried to contact Mr. Frank (718) 321-3136, ext 236 (Steve) regarding whether additional work was taking place at the site. However, I could only leave a voice message. 10/25/11 - Raphael Ketani. I tried to contact Mr. Frank, but I could only leave a voice message. 10/28/11 - Raphael Ketani. Mr. Frank sent me an e-mail with the September 2011 soil sampling data and a map showing the locations of the borings and the results to date. In his e-mail he stated the following: I have attached the soil results from the borings we completed in September at 120th Precinct. We put in the wells that we need to conduct the SVE pilot test and we are getting a subcontractor on board to facilitate that work. We anticipate that the testing will be completed this fall/winter and we will submit the soil test results and a Remedial Action Plan after the testing is completed. I will let you know when we have a firm schedule for the pilot test work. The soil samples were taken during 9/6/11 and 9/7/11. A very contaminated horizon was discovered between 11 feet to 13 feet below grade, with the exception of the sample at location LSB-22 at 13 to

15 feet down. The other sampling locations were LSB-11, 13 to 17 and 20. There were virtually no SVOC hits. The exceedences were in the tens to hundreds of thousands of parts per billion for individual VOC analytes. 4/16/13 - Raphael Ketani. Mr. Frank (718) 321-3136, ext 236 (Steve) hadn't contacted me or sent me a report in over a year. I left a voice message requesting that he call me regarding progress at the site and the submission of the late reports. 4/17/13 - Raphael Ketani. Mr. Frank called me back. He said that a successful pilot SVE test was conducted during March 2013. They have a conceptual design and they will submit a work plan to the DEC during May 2013. However, not much work took place for this project over the ensuing months since we had last communicated as LiRo pursued other larger projects. 5/15/13 - Raphael Ketani. I spoke to Mr. Frank (718) 321-3136, ext 236 (Steve) regarding progress at the site. He said that the full scale SVE work plan was almost ready. His staff were working on the CAD drawings. Once they have the drawings, then he will send me the work plan. I told him that would be fine. 5/28/13 - Raphael Ketani. I reviewed the 5/16/13 Design Analysis Report from LiRo Engineers. Soil contamination is above standards at the 8 to 16 foot level bgs. The north/northeast extent of the soil contamination was determined via borings LSB-12 and LSB-23. The south/southeast extent of the soil contamination was determined via boring LSB-18. An eastern limit couldn't be determined due to the presence of a high pressure gas main and Wall Street. The western limit couldn't be determined due to the presence of the precinct building. NAPL is not present on the groundwater. There were no analytes detected in the groundwater. The volume of the contamination was estimated as 60 feet by 40 feet by 8 feet thick or 740 cubic yards. The SVE pilot test took place on 3/8/12. Wells SVE/LSB-11, 14, 17, 19 and 22 were measured for vacuum, flow rate and VOCs. The test lasted 2 hours and 5 minutes. No PIDs were measured as the vacuum interfered with the sampling. PIDS were detected when the vacuum stopped. Vacuum was induced at a rate of 30 cu.ft./min. and 75 cu.ft./min. - 0.01 to 6.63 inches of water, respectively. The test was run for 20 to 30 minutes for each flow rate. Vacuum readings were made during the test from LSB-11, 14, 19 and 22 at 10 to 20 minute intervals in order to determine the radius of influence (ROI). LSB-11 tested at 30 and 75 CFM for 20 minutes each, but no static pressure was detected. The vacuum readings suggested a ROI of about 20 feet. LSB-14 was tested at 10 to 20 minute intervals, but no static pressure was detected. The ROI was determined to be about 25 feet. The recovered vapors will be treated using activated carbon. A 7.5 HP blower will be used with a capacity of 396 CFM at 2.4 inches of mercury. Benzene emissions will be monitored via the Stipulation. Field screening will take place using a PID instrument. Periodic tedlar bag samples will be collected in accordance with EPA procedures. Analyses will be for benzene and TPH. There will also be quarterly groundwater sampling within the plume and annual sampling site wide. The sampling, operation and performance of the system will be monitored. System monitoring data will be presented in quarterly status reports. The reports will have the air and groundwater monitoring results, groundwater sampling results, field measurements and an evaluation of the system regarding whether it is operating within the air emissions requirements. From Table 1, there were significant soil VOC hits and exceedences in the 9/7/11 and 9/9/11 samples from the 11 to 13 foot interval at LSB-11, 13 to 17 and 20. The LSB-22 sample from the 15 to 17 foot interval had exceedences. According to Table 2 results, LSB-19 did not develop

78 RICHMOND TERRACE (Continued)

S103275005

much vacuum. Figure 3 shows that the sample from LSB-17 had very high contaminant concentrations. My comments regarding the information were that groundwater sampling must take place at least bi-annually site wide. Also, it appeared that LSB-19 would not be a useful well for the SVE method of remediation as it did not develop significant vacuum. It was also not demonstrated that the ROI would reach beyond LSB-17, though vent well LSB-23 is depicted as further south. 6/3/13 - Raphael Ketani. An e-mail was sent to Mr. Frank approving the report and with the above comments. I also added that, in the event the first three rounds of confirmatory soil sampling show that the SVE method of remediation is not successful in significantly reducing the soil contamination, then a work plan must be submitted within 30 days of the date of submission of the soil analytical results for the third round of confirmatory samples. In the e-mail, I also asked for a task schedule for the planned work. 8/26/13 - Raphael Ketani. I tried to contact Mr. Frank (718) 321-3136, ext 236, but could only reach his voice mail. I sent him an e-mail requesting a progress update. 9/10/13 - Raphael Ketani. I reviewed the Soil Vapor Extraction Remediation Work Plan dated 8/27/13. The scope of work included: installing the full SVE system for the unsaturated petroleum impacted soil; weekly operation and maintenance monitoring; monthly operation and monitoring reporting; quarterly compliance air sampling; semi-annual groundwater monitoring; semi-annual monitoring reporting; annual SVE system remediation soil sampling; 3 years of SVE system remedial evaluation. The report then went on to describe each part of the scope of work in more detail. The last part of the work plan contained analytical data for groundwater samples which were taken on 7/8/13 from wells LMW01 to LMW03. The results were all non-detect for VOCs. I found the work plan to be acceptable and sent an e-mail to Mr. Frank stating this. 10/18/13 - Raphael Ketani. I spoke to Mr. Steve Frank (718) 321-3136, ext 236 regarding progress at the site. He said that the documents for the contract for the work were put out to bid this week. He expected construction of the system to take place this November. 2/13/14 - Raphael Ketani. As no communication had taken place from Mr. Frank, I left him a voice message requesting an update and I sent him an e-mail, again requesting an update. Mr. Frank sent me the following e-mail: There were some problems on the City's end in the fall and the project had to be re-bid. Earth Globe was the successful bidder on the re-bid and they will get notice to proceed after their City Vendex approval goes through. We expect the system to be constructed and operating by June 2014. After Earth Globe gets the NTP and submits a schedule, I can forward their construction schedule to you if you would like. I responded that the Department would like to receive the construction schedule. 2/14/14 - Raphael Ketani. Mr. Frank sent an e-mail stating that the remediation company is Clean Globe, not Earth Globe. The company was started by two managers from EnviroTrac with remediation experience. 4/18/14 - Raphael Ketani. I received and reviewed the 4/15/14 schedule for the installation of the SVE soil treatment system. I had no comments. 6/24/14 - Raphael Ketani. I sent an e-mail to Mr. Frank (718) 321-3136, ext 236 requesting a progress update. 6/25/14 - Raphael Ketani. In response, Mr. Frank sent me the following e-mail: LiRo's subcontractor Clean Globe has finished construction of the SVE system and will begin the start-up of the system on Thursday, June 26, 2014. During start-up the system will be run and monitored for various periods of time to allow for adjustment of pressures and flow rates and to maximize system performance. Once

78 RICHMOND TERRACE (Continued)

S103275005

start up is completed, LiRo will issue a Start-up Report (anticipated submittal in August 2014) and the system will be put into service. We will sample groundwater in July and begin issuing semi-annual monitoring reports in August 2014. 8/25/14 - Raphael Ketani. As there has been no word from Mr. Frank regarding progress at the site and no document submissions, I sent an e-mail requesting a site status update and submission of the aforementioned reports. 9/11/14 - Raphael Ketani. I reviewed the LiRo Semi-Annual Monitoring Report and Soil Vapor Extraction System Start Up Report dated 9/2/14. On 4/8/14, Aquifer Drilling and Testing installed soil borings SVE/LSB-23 and SVE/LSB-24 as vacuum monitoring points VM-3 and VM-2. The blower, equalization tank, carbon canister and hand pump for the system were installed on 5/7/14. The SVE system consists of 3 extraction wells (SVE-1 to 3) and 3 vacuum monitoring points (VM-1 to 3). Startup activities took place on 6/26/14 and 7/14/14. EnviroTrac started routine SVE system operation and maintenance on 7/31/14. They perform weekly and monthly operation and maintenance checks and measurements on the system. The radius of influence of the system was found to be from 12 to 20 feet. System influent and effluent air samples were collected on 6/26, 7/3 and 7/14. The benzene concentrations were below the Stipulation Agreement limits. The influent air samples had high results for total xylenes (up to 30,400 ppb), 1,2,4-trimethylbenzene (up to 10,600 ppb), toluene (up to 10,100 ppb), 1,3,5-trimethylbenzene (up to 4280 ppb) and ethylbenzene (up to 2480 ppb). The effluent sample results were low in concentration - up to the middle double digits with non-detects for each sampling date. Groundwater sampling took place on 6/30/14. No product was found in the wells. Samples were collected from LMW-1 to LMW-3. All of the results were completely non-detect. LiRo recommends semi-annual groundwater gauging, sampling and analysis from wells LMW-1 to 3, continued operation of the SVE system with weekly and monthly operation and maintenance checks and quarterly air discharge sampling and analysis and semi-annual reporting of air and groundwater data. I approved the report and the recommendations contained therein. 4/30/15 - Raphael Ketani. I reviewed the LiRo Semi-Annual Monitoring Report and Soil Vapor Extraction System Report dated 4/27/14 for the period August 2014 to January 2015. On October 17, 2014, quarterly influent and effluent air samples were collected by EnviroTrac from extraction wells SVE-1 to SVE-3. On December 5, 2014, LiRo gauged the wells and collected groundwater samples LMW-1 to LMW-3. Wall Street is to the east and the precinct building is to the west. The area with soils above the Soil Cleanup Limits is generally found from 8 to 16 feet bgs. The estimated total volume of impacted soils is about 50 feet by 50 feet and 8 feet deep - 740 cu. yds. The SVE system operated for 174 out of a possible 184 days. There were high concentrations of total VOCs in both the influent and effluent samples. TPH was 3530 ppb-v undiluted and 7380 ppb-v diluted for the influent air and 3656 ppb-v undiluted and 5265 ppb-v diluted for effluent air. Benzene was 10.1 ppb-v undiluted and non-detect for diluted influent air and 6.8 ppb-v undiluted and 5.2 ppb-v diluted for effluent air. The SVE system discharge was in compliance with the Stipulation discharge limit during the entire monitoring period. It is estimated that a total of 41.98 lbs. of VOCs have been removed since the system began operation on 7/31/14. Groundwater sampling took place on 12/5/14. Depths to groundwater were from 16.62 feet bgs to 32.49 feet bgs. Groundwater elevations varied from 8.06 feet to 20.77 feet above mean sea level. Flow direction on 12/5/14 was due

78 RICHMOND TERRACE (Continued)

S103275005

west. The VOC analytical results for all of the samples were completely non-detect. LiRo proposes to continue operating the SVE system and doing influent and effluent air sampling. They will also continue to monitor and sample the three groundwater wells. 8/25/15 - Raphael Ketani. I sent an email to Mr. Frank requesting the SVE and groundwater monitoring reports by 9/18/15. Mr. Frank responded today to my email. He stated that: the 120th Precinct is a New York City Consent Order site and as such we continue to operate the SVE system, conduct required monitoring and submit semi-annual reports as per the site monitoring plan. We will forward the next monitoring report as soon as it has been completed and reviewed. I anticipate this will be before September 18th. 9/16/15 - Raphael Ketani. I reviewed the LiRo Semi-Annual Monitoring Report and Soil Vapor Extraction System Report dated 9/16/15 for the period February 2015 to July 2015. The three wells were gauged on 3/11/15 and gauged and sampled on 6/12/15. From 7/27/15 to 7/29/15 nine confirmatory borings were installed. These were LSB-21 to LSB-29. A total of 27 soil samples were collected. These came from the shallow interval (less than 12 feet bgs), the middle interval (12 feet to 24 feet bgs) and the deep interval (greater than 24 feet bgs). These borings were installed in the vicinity of the March and September 2011 confirmatory boring locations. All of the SHALLOW soil sample results were either greatly reduced when compared to the previous results or non-detect. For the middle depth samples, LSB-22, 23B and 24 to 26 had very low total VOC results. LSB-21 and LSB-29 had greatly reduced results when compared to the previous years' results, but the total VOCs were still extremely high at 370,000 ppb and 92,800 ppb, respectively. The middle depth soil samples for LSB-27 and LSB-28 had extremely high total VOC results of 649,580 ppb and 754,900 ppb, respectively. For the deep depth soil samples, all of the total VOC results were either non-detect or very low, except for LSB-23B which was 191,080 ppb. The SVE system was running 180 days out of 181 days during this period. The air flow rate was about 170 cfm to 190 cfm. Weekly PID influent and effluent measurements were collected by EnvT and CGE. The highest weekly PID measurements were 36 ppm/vol to 43.5 ppm/vol. The highest weekly PID measurements for benzene were 0.72 ppm/vol to 0.87 ppm/vol. Laboratory benzene was 0.004 ppm/vol to 0.022 ppm/vol. For the 6/30/15 air sample, the influent benzene concentration was 35.8 ppb/vol and the effluent benzene concentration was 4.58 ppb/vol. The estimated mass removed was 45.54 lbs. from 2/1/15 to 4/30/15 and 47.42 lbs. from 5/1/15 to 7/31/15. Groundwater samples were taken on 6/12/15 from LMW-01 to LMW-03. LMW-01 was the only downgradient well. Groundwater flow was determined to be to the northwest. All of the VOC results were non-detect. LiRo Engineers stated that the primarily source, the 4,000 gal. UST, had been removed and there was no free product in the wells. They recommend continued semi-annual groundwater gauging and sampling, continuing the operation of the SVE system and the continuation of semi-annual air and groundwater results reporting. I noted that the locations with the highest soil contamination were LSB-21 and LSB-27 to LSB-29 in the northern quadrant of the spill area and directly north of the 4,000 gal. UST. Locations LSB-27 to LSB-29 were close together. I approved the report without comments. 12/15/15 - Raphael Ketani. I sent Steve Frank (718) 321-3136, ext 236 an email in which I requested a brief remedial progress update. Mr. Frank responded with the following email: The system is performing well based on the results from progress soil borings that were documented in our September 2015 report to you. The

78 RICHMOND TERRACE (Continued)

S103275005

system has had no downtime in the period August December 2015. We continue to monitor the system and perform any cleaning or maintenance required. The next semi-annual report will cover the period August 2015 January 2016. 2/18/16 - Raphael Ketani. I reviewed the LiRo Engineers Inc. 2/18/16 Semi-Annual Monitoring Report and Soil Vapor Extraction System Report for the period August 2015 to January 2016. The wells (LMW-01 to LMW-03) were gauged and 3 groundwater samples were collected on 11/5/15. The SVE system was operational for the entire reporting period. Weekly influent and effluent photo-ionization detector (PID) measurements were collected by CGE. Quarterly air samples were collected from the carbon adsorption system influent and effluent air streams on 9/1/15 and on 12/18/15. The parameters that were tested for consisted of total VOCs, TPH and benzene. The results for the samples from 12/18/15 were significantly lower than those for the 9/1/15 sample. The SVE system effluent samples continued to be in compliance with the STIP discharge limit for benzene. As shown on the weekly influent PID readings graph for total VOCs, the overall trend in concentration since 7/31/15 has been decreasing. The estimated total amount of TPHs removed during this monitoring period is 2.20 pounds. Approximately 49.62 pounds of TPHs have been removed since the system started on 7/31/14. Operation and maintenance checks indicated that the SVE system was operating normally during this period. Air flow and vacuum measurements were collected on 12/15/15 at each SVE well (SVE-01 to SVE-03) and at each vacuum monitoring point (VM-01 to VM-03). The inlet header airflow was 150 CFM (cubic feet per minute) and the inlet header vacuum was 68 inches of water. Vacuum measurements at the SVE wells and the vacuum monitoring points were from 0.5 inches of water at VM-02 to 53 inches of water at SVE-02. The radius of influence was determined to be from 12 to 20 feet (vacuum of at least 0.1 inches of water). Groundwater samples were collected on 11/5/15 for the semi-annual monitoring event from LMW-01 to LMW-03. No free product was observed in the wells. The VOC analytical results for each sample were entirely non-detect. LiRo recommends the following: 1) continue semi-annual groundwater gauging, sampling and analysis. 2) continue the operation of the SVE system with weekly and monthly operations and maintenance monitoring and quarterly air discharge sampling and analysis. 3) continue with semi-annual reporting of air and groundwater data. I approved the data in the report and the recommendations contained therein. 5/20/16 - Raphael Ketani. I sent Steve Frank (718) 321-3136, ext 423 (Franks@liro.com) an email in which I requested a brief remedial progress update. Mr. Frank sent me the following email: The SVE system continues to operate effectively. Our office transmitted our latest semi-annual report to you in February 2016. The site is on a semiannual reporting schedule so the next report will cover the period February 2016 through July 2016 and will be submitted in August 2016. 8/31/16 - Raphael Ketani. I reviewed the LiRo Engineers Inc. 8/30/16 Semi-Annual Monitoring Report and Soil Vapor Extraction System Report for the period February 2016 to July 2016. On 4/14/16 and 4/15/16, the original SVE wells were decommissioned. SVE-01R, SVE-02R and SVE-03R were installed. The replacement took place because the soil samples from the July 2015 confirmation borings showed that the contaminant mass had decreased to the point that vapor recovery had become inefficient. Thus, the reinstallation of the SVE wells in more contaminated areas in a new configuration was undertaken in order to remove more contamination. VM-01, VM-02 and VM-03 continued to be

78 RICHMOND TERRACE (Continued)

S103275005

active. Clean Globe Environmental has been managing the SVE system since May 2015. During the reporting period, the SVE system was operational for 182 days (the entire period). Weekly influent and effluent PID measurements were taken by CGE. Quarterly air samples were collected from the carbon adsorption system influent and effluent points on 3/22/16 and 6/7/16. The air samples were submitted for analysis using method TO-15. The benzene emissions for the SVE system were completely in compliance with the emissions limits in the Stipulation Agreement. For 6/21/16, the inlet flow volume was 120 cf/min. and the inlet header vacuum was 78 inches of water. The radius of influence (ROI) of the SVE system varied from 12 to 20 feet. The estimated amount of TPH removed during this period was 0.69 lbs. The total amount of TPH removed since the system had started during July 2014 was 50.31 lbs. The results for the soil samples taken on 4/15/16 from SVE-01R for the 12 to 13 foot interval and the 16 to 17 foot interval were entirely non-detect for VOCs and SVOCs. The soil results for the SVE-02R boring for the 14 to 15 foot interval sample were 66 ppb of total VOCs and no SVOCs. The soil samples from the 16 to 17 foot interval at SVE-02R had 335 ppb of total VOCs and no SVOCs. The 11 to 12 foot interval soil sample from the SVE-03R location had 116,590 ppb of total VOCs and 5600 ppb of SVOCs. The soil sample from the 16 to 17 foot interval at the SVE-03R location had 1647 ppb of total VOCs and no SVOCs. Groundwater samples were collected on 6/6/16 for the semi-annual monitoring event from LMW-01 to LMW-03. The wells were also gauged on this date. No free product was observed in the wells. The VOC analytical results for each sample were entirely non-detect. LiRo recommends the following: 1) continue semi-annual groundwater gauging, sampling and analysis. 2) continue the operation of the SVE system with weekly and monthly operations and maintenance monitoring and quarterly air discharge sampling and analysis. 3) continue with semi-annual reporting of air and groundwater data. I approved the data in the report and the recommendations contained therein. 9/1/16 - Raphael Ketani. Ms. DeLozier sent me an email stating that LiRo Engineers was optimistic that the newly installed SVE wells were close enough to remediate the soil contamination - particularly at LSB-23B. A soil sample will be taken at LSB-23B from the 24 to 25 foot interval during the next round of confirmatory soil sampling. 2/22/17 - Raphael Ketani. As the next bi-annual monitoring report is overdue, I sent an email to Ms. DeLozier (DeLozierm@liro.com) requesting its submission. 2/23/17 - Raphael Ketani. Ms. DeLozier responded by email today. She said that the fourth quarter 2016 report will cover from July 2016 to January 2017 and will be submitted on 2/28/17. 2/28/17 - Raphael Ketani. I reviewed the LiRo Engineers Inc. 2/28/17 Semi-Annual Monitoring Report and Soil Vapor Extraction System Report for the period August 2016 to January 2017. The SVE system consists of three extraction wells, SVE-01R to SVE-03R, and three vacuum points, VM-01 to VM-03. The SVE is operational and continues to be managed by Clean Globe Environmental (since May 2015). During the reporting period, the SVE system was operational for 184 days (the entire period). Weekly influent and effluent PID measurements were taken by CGE. Quarterly air samples were collected from the carbon adsorption system influent and effluent points on 9/20/16 and 12/13/16. The air samples were submitted for analysis using method TO-15. The benzene emissions for the SVE system were completely in compliance with the emissions limits in the Stipulation Agreement. The specific SVE results for the 9/20/16 sample were 28.4 ppb/v (128.8 ug/m3) influent and 100.8 ppb/v

78 RICHMOND TERRACE (Continued)

S103275005

(456.9 ug/m3) effluent. The specific results for the 12/13/16 sample were 61.0 ppb/v (255.0 ug/m3) influent, and 126.5 ppb/v (535.1 ug/m3) effluent 1:1 dilution and 133.4 ppb/v (566.1 ug/m3) effluent 1:10 dilution. For the August to January monitoring period, the average flow rate was 120 cfm. The relocation of the extraction wells resulted in an increase in the mass of soil VOCs removed from 0.09 pounds during February 2016 to April 2016 to 0.60 pounds from May 2016 to July 2016. Though only 0.14 pounds was removed from August 2016 to October 2016 and only 0.12 pounds from November 2016 to January 2017. The total amount of TPH removed since the system had started during July 2014 was 50.57 lbs. Confirmatory soil sampling will take place if the amounts collected are less than 0.10 pounds during a particular reporting period. Groundwater samples were collected on 12/12/16 for the semi-annual monitoring event from LMW-01 to LMW-03. The wells were also gauged on this date. No free product was observed in the wells. The VOC analytical results for each sample were entirely non-detect. Groundwater flow was to the southwest [DEC case manager's note: this direction of flow may be due to tidal action or the effect of a pumping well to the southwest of the site]. LiRo recommends the following: 1) continue semi-annual groundwater gauging, sampling and analysis. 2) continue the operation of the SVE system with weekly and monthly operations and maintenance monitoring and quarterly air discharge sampling and analysis. 3) continue with semi-annual reporting of air and groundwater data. 8/31/17 - Raphael Ketani. I reviewed the LiRo Engineers Inc. 8/31/17 Semi-Annual Monitoring Report and Soil Vapor Extraction System Report for the period February to July 2017. The SVE system consists of three extraction wells, SVE-01R to SVE-03R, and three vacuum points, VM-01 to VM-03. The SVE system is operated and maintained by EnviroTrac, Ltd. During the reporting period, the SVE system was operational for 181 days (the entire period). Weekly influent and effluent PID measurements were taken by CGE and EnviroTrac Ltd. Quarterly air samples were collected from the carbon adsorption system influent and effluent points on 3/27/17 and 6/15/17. The air samples were submitted for analysis using method TO-15. The benzene emissions for the SVE system were completely in compliance with the emissions limits in the Stipulation Agreement. The SVE total VOCs results for the 3/27/17 sample were 13.78 ppb/v (59.82 ug/m3) influent and 31.73 ppb/v (136.65 ug/m3) effluent. The total VOCs results for the 6/15/17 sample were 3.13 ppb/v (12.02 ug/m3) influent, and 231.9 ppb/v (1136 ug/m3) effluent. For the February to April monitoring period, the average flow rate was 120 cfm. For the May to July monitoring period, the average flow rate was 113.6 cfm. The total amount of TPH removed since the system had started during July 2014 was 50.62 lbs. Between May 3rd and 4th 2017, 13 confirmatory soil borings (LSB-30 to LSSB-42) were conducted and 32 soil samples were collected. Seven of the samples had at least one VOC concentration above the standards. The total VOC concentrations varied from non-detect in 12 samples to 295,410 ppb in the sample from LSB-42 which was collected from the interval 11 to 13 feet bgs. No SVOCs were detected above the standards. Groundwater samples were collected on 7/14/17 for the semi-annual monitoring event from LMW-01 to LMW-03. The wells were also gauged on this date. No free product was observed in the wells. The VOC analytical results for each sample were entirely non-detect. Groundwater flow was to the southwest [DEC case manager's note: this direction of flow may be due to tidal action or the effect of a pumping well to the southwest of the site].

78 RICHMOND TERRACE (Continued)

S103275005

LiRo recommends the following: 1) reconfigure the SVE system from 3 SVE extraction wells (i.e. SVE-01, SVE-02 and SVE-03) to one SVE extraction well (i.e. SVE-04) located in the vicinity of LSB-32 and LSB-42 and screened from 10 to 14 feet bgs. 2) change groundwater gauging and sampling from semi-annually to annually. 3) decommission SVE-01, SVE-02 and SVE-03. I approved the report and the recommendations, except I required that SVE wells 01 to 03 be maintained and operated for at least the next 6 month period. 12/4/17 - Raphael Ketani. Ms. DeLozier (DeLozierm@liro.com)/(718) 882-5476 sent me an email on 12/1/17 stating the following: We would like to inform you that the SVE system at the NYPD -120th Precinct (NYSDEC Spill No. 0904952) has been temporarily shut down. The SVE blower motor shorted out and needs to be replaced. A replacement blower has been ordered and should be installed within the next 4 to 5 weeks (based on manufacture delivery). If you would like, I can send you an email update once it is up and running again. I responded by email and stated that she should notify the Department when the new blower has been installed and is operating. 12/22/17 - Raphael Ketani. Ms. DeLozier informed me today by email that the blower was replaced on 12/18/17 and that the system is fully functional. 3/2/18 - Raphael Ketani. I reviewed the LiRo Engineers Inc. 3/2/18 Semi-Annual Monitoring Report and Soil Vapor Extraction System Report for the period August 2017 to January 2018. Groundwater sampling and gauging took place on 11/28/17. The wells sampled and monitored were LMW-01 to LMW-03. Groundwater flow was to the west at a gradient of 0.0125 ft/ft on 11/28/17. The VOC analytical results were almost entirely non-detect for all 3 samples with only 6 hits total which were up to 1.5 ppb. SVE-04 was installed on 1/2/18. Soil samples were collected from 13.5 feet bgs and 15 feet bgs. The soil samples were tested for VOCs and compared to the unrestricted residential soil standards in CP-51. The well will be incorporated into the SVE system during the first quarter of 2018. The soil sample from the 13.5 to 14 foot interval had 7 VOC hits that were low (0 to 25 ppb) to moderate (26 to 100 ppb) in concentration, 2 hits that were high (101 to 200 ppb), 1 hit of 320 ppb of 1,3,5-trimethylbenzene and 6 hits that were extremely high (501 ppb to values in the many thousands of ppbs). These extremely high hits were mostly 1,2,4-trimethylbenzene and the xylenes. The soil sample from the 15 to 16 foot interval had 13 hits that were low to moderate and 3 hits that were high. The SVE system consists of three extraction wells, SVE-01R to SVE-03R, and three vacuum points, VM-01 to VM-03. The SVE system is operated and maintained by EnviroTrac, Ltd. The SVE system was operational for 168 out of a possible 184 days during this reporting period. The system was off on 11/29/17 due to a blower failure. The blower was replaced on 12/18/17 and the system became operational again. Weekly influent and effluent PID measurements were taken by CGE and EnviroTrac Ltd. Quarterly air samples were collected from the carbon adsorption system influent and effluent points on 9/7/17 and 12/18/17. The air samples were submitted for analysis using method TO-15. The benzene emissions for the SVE system were completely in compliance with the emissions limits in the Stipulation Agreement. The SVE total VOCs results for the 9/7/17 sample were 3.8 ppb/v (15.2 ug/m3) influent and 42 ppb/v (200.5 ug/m3) effluent. The total VOCs results for the 12/18/17 sample were 95.7 ppb/v (420.9 ug/m3) influent, and 0.193 ppb/v (0.950 ug/m3) effluent. For the August to October monitoring period, the average flow rate was 110 cfm. For the November to January monitoring period, the average flow rate was 112 cfm. The

S103275005

total amount of TPH removed since the system had started during July 2014 was 50.88 lbs. The 0.26 lbs. recovered during this period is considered biased high as the system was down for a while and the vapors accumulated in the subsurface. LiRo requested approval to use just SVE-04 for vapor extraction. Also, they wanted to decommission wells SVE-01R, SVE-02R and SVE-03R. I approved the report and the request to abandon SVE-01R and SVE-02R. However, I stated that SVE-03R must remain part of the vapor extraction system as 57,000 ppb of total VOCs vapors were extracted from this well during May 2017. 5-3-2018 The spill is reassigned to AZ as per VB request. AZ 6-28-2019 Reviewed a report dated 3/15/2019. SVE system is operational at the site. Approximately 50.88 lbs. of VOCs have been removed from the soil since 2014. There are no exceedances in VOC concentrations in groundwater. Reports are issued annually. LiRo requested removal of two groundwater monitoring wells from the sampling program. I have contacted S. Frank and discussed the site with him. Since there are only three existing monitoring wells at the site removal of three wells will affect accuracy of groundwater elevation measurements. Therefore, it was decided that these wells will remain included in the monitoring schedule. AZ"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

DEC Memo: "204017. see eDocs Jane, EMIS # 204017 dated 1/10/07 was a one ounce spill of dielectric fluid to concrete at the New Brighton Substation in Staten Island. The spill meets de-minimis criteria and was put on the de-minimis program following its discovery. However, the incident was unnecessarily and erroneously called in to the DEC Hotline. It was given DEC spill # 06-11297. As of 18:10 the clean up was complete and a valve bag was installed over the source. I have attached the current emis report for this incident. Please let me or the other ERTs know if you need any other information to close this spill on your database. Thank you, Pat Hanley

sewers or waterways. gg 27365 UPDATE 7/9/02 0930 Hrs. All waste was taken to VBSC and placed in a drum for disposal as hazardous waste....G. Triolo, #01868. UPDATE 8/8/02 1325 hrs....According to this report, no oil sample was taken from the tapchanger for this incident. However, an oil sample was taken in 8/97 (prior to the incident) from the tap changer for PCB analysis at that time. Analytical result (LSN 97-09722) showed oil in tap changer contained 11 ppm PCBs. Therefore, the cleanup was not necessary to be handled as 50-499 ppm PCB spill.....A.lp (71684)"

DEC Memo: "7/29/03 TIPPLE REQUESTED DOCUMENTATION/ LETTER SENT 8/21/03 Received Site Assessment Report dated October 2002 prepared by Cifron Environmental Services, Inc. No post-excavation soil samples were collected from the excavation. Six borings were completed across the property to approx 15'bgs. Soil samples were collected from 10-12'bgs. No VOCs were detected. No groundwater samples collected. 12/9/03 TRANSFERRED FROM TIPPLE TO ROMMEL 10/4/04 Transferred from Rommel to Foley. See also spill #s 0407239(C) and 0407826(C). 10/5/04 Required soil/groundwater sample from source area or immediately downgradient of the tank field. Report due 11/12/04. 10/14/04 Received call from Francis Onaga, Cifron (917-478-8549). Will do soil borings again and install 3 wells. Report to be submitted by 12/20/04. 2/7/05 Extended deadline to 2/28/05. 3/2/05 Received analytical results for investigation work performed by Cifron Environmental Services. Three borings/wells installed. Wells were completed at depths between 25'bgs and 30'bgs (0.020 slotted screen with 10' of screen intercepting the watertable). Soil analytical indicate that none of the targeted compounds were detected above soil cleanup objectives. GW samples show total BTEX between 50ppb(MW-1) and 11500ppb(MW-3). MTBE from 420ppb(MW-3) to 18000ppb(MW-2). 3/21/05 Issued letter requiring delineation of soil and gw. Minimum of borings/wells northeast of MW-3, north of MW-3, northwest of MW-2 and north of MW-2. Also requested boring logs for 2/25/05 report. Investigation summary report due 6/20/05. 6/1/05 Received call from Veeru Dhillon, Richmond Petroleum. Requesting extension due to change in consultant. He will send request in writing next week. 6/15/05 Spoke to Chuck Stewart, Harbor Environmental. Will fax proposed boring locations and will notify me when they will be drilling. 4/28/06 Spoke to IP Singh, MIG Environmental, working for Richmond Petroleum. Requesting copy of 3/21/05 letter and any boring logs. 6/30/06 DEC lead transferred from K. Foley to J.A. Maisonave. - JAM 4/4/2007 Spoke to Ricky Fitzgerald at R&N Petroleum, Inc. I emailed him the letter from the DEC to Mr. Veeru Dhillon on March 21, 2005. I also requested any later reports that he may have from CES Env. - JAM 5/22/07 Received a letter via fax from R. Fitzgerald stating, R&N Petroleum, Inc. will be addressing deficiency letter from NYSDEC via Geoprobe Borings and sampling of existing Groundwater Monitoring wells on May 30, 2007. - JAM 9/18/07 Received a call from Ricky Fitzgerald (phone # 973-728-2214). He said they conducted a geoprobe investigation at the site and found residual contamination downgradient. He said that it most likely continued downgradient and across the street. He recommends additional geoprobe borings and monitoring wells be advanced/installed in the sidewalk adjacent to

DEC Memo: "e2mis no. 157703: 3/19/05 0640 hrs. T/S Matteo reported to the control center that a transformer on pole 6115 that was hit earlier this morning started to leak after he reset the transformer breaker when the customer at 762 Richmond Terr informed him that their service went out. The transformer is an ABB serial no. 93A130972 and the manufacturers tag states the oil to be non-PCB. The oil dripped onto the vehicle that hit the pole, the sidewalk and the street

POLE #6115 (Continued)

S106867328

around the pole, an area approximately 3'x3'. The T/S estimates that approximately 1 pint of oil leaked from the transformer. The T/S has wiped down the vehicle with absorbant pads and has placed pads and speedi-dri on the ground. At 0714 hrs the transformer has been cut clear and bagged stopping the leak. CDOH has been notified to clean the spill and to replace the transformer. 3/19/05 0740 hrs. The vehicle involved in the spill is a 1996 Ford Crown Victoria T464304C N.Y. owned by Craig Jones 27 Warren St Apt 7D SI NY 10304. This is the vehicle that struck the pole at approximately 0530 this morning. The vehicle was still on location awaiting removal when the transformer tripped

=====3/19/05 0900 hrs. CDOH supervisor J.Labora reports that the cleanup of the oil has been completed. The crew cleaned and area 4'x4' on concrete and asphalt using speedi-dri and citrus cleaner. The area was double washed and rinsed and the liquid was absorbed using the speedi-dri. The crew generated a half bag of debris and it will be disposed of as non hazardous waste in the stores area in the VBSC when the crew returns to the yard upon completion of the pole replacement. The clean up was completed at 0900 hrs.....G
Gullstrand 27365 UPDATE 3/22/05 0800 Hrs. This report is being updated to provide the following information: 1) The First Reported time is 06:47 hrs (not 06:40 hrs as indicated above in the Detail Description). 2) The finder was, M. Matteo, employee #16946, Troubleshooter, Control Operations. 3) As per J. LaBora (Foreman) there was no oil on the sidewalk (concrete). 4) The street area affected 3'x3' asphalt and the area cleaned was 4'x4' by double washing with Citri Clean and double rinsing with water and speedy dry was used as the absorbent. 5) The waste (1/2 bag) was disposed of at VBSC as non-hazardous waste. 6) Transformer was removed and replaced on the same day. This report is being submitted to the DEC for approval "

Remarks: "1 pint of dielectric fluid leaking from transformer, being cleaned up now. Vehicle hit pole, causing damage to transformer."

DEC Memo: "Phone numbers given the night of the event did not work. Monday 6/1 - Blue Diamond called DEC to discuss what happened. Spill is actually in the basement of 109 Van Pelt Ave. Suction line failure, above ground(?) near the boiler. Spilled oil to the basement floor. Oil mixed with water (?), Fire dept was called and pumped oil/water mixture out (?). Initial spill report was called in and sounded like a street spill from a vehicle. Unknown how Sanitation Dept was involved. Blue Diamond was at the site Friday night. They saw the problem, but did not call in the spill. They said they found out Fire Dept called it in and therefore they didn't call it in. Blue Diamond did no cleanup. They said homeowner was going to clean it himself. Unknown what happened to the leaking suction line or the remaining fuel in the fuel tank. Property owner: Robert Adamo 85 Gaynor st, Staten Island 10303 - tel #917-836-2978 Property Address: 109 Van Pelt Ave. - Rental Property. 06/01/09-Vought-Site visit by Vought. Homeowner (Bob Adamo cell:347-538-1442) onsite and cause of spill was broken fuel line where line connected to 275-gallon AST. Resulting spill impacted concrete floor and boiler pit and also mixed with sewage water. Levels of water and oil constant in pit suggesting no

BOB ADAMO (Continued)

S109583321

subsurface infiltration. As per Adamo, FDNY recovered approximately 20-gallons of #2 fuel oil and the tank only contained 30-40 gallons of fuel at time of spill. Blue Diamond arrived onsite and as per Blue Diamond and Adamo, the last delivery occurred around two months ago. No spill out of vent pipe. No sumps affected and spill on concrete. No residents on first floor above tankroom as apt is empty and Vought inspected residence on top (second floor) of building and no vapors as well however tenants stated that there was an odor prior to cleanup of basement. Petro replaced leaking supply line. Adamo hired Miller Environmental (Vought spoke to Miller-Ken Walsh) and issued cleanup requirement of powerwashing basement and recovery of wash water. Adamo agreed to have Miller onsite next morning to begin work and Vought approved. DEC requires: 1)powerwashing of basement floor 2)submission of invoice for spill closure. 06/03/09-Vought-Called Bob Adamo to confirm cleanup by Miller who performed cleanup. Miller powerwashed basement, and removed oil debris and drums. Spill cleanup completed and Adamo to fax copy of invoice to Vought for spill closure. 06/04/09-Vought-Received invoice from Miller and address of owner is: Robert Adamo 85 Gaynor Street Staten Island, NY 10309 Work included removed soaked debris from basement, powerwash basement floors and walls to 4 and disposal of contaminated solids and liquids. Spill closed by Vought as spill on concrete with no impact to soil or groundwater and no continuing vapor impact. Vought sent out NFA to above address. Vought also called Adamo and no answer and voicemail box full so unable to leave message."

DEC Memo: "No PBS Records - No Spill History at this address Sangesland left a message for Frank Castalano of PW Grosser requesting more information. 1/6/05-Vought-Spoke to Zeb Youngman (PW Grosser 631-589-6353) who will be sending in subusface investigation report. Elevated VOC's at depth of 16' below grade. Groundwater not encountered. Abandoned USTs filled with concrete. Groundwater sample required. Gasoline tanks were last in service in 1989. PW Grosser working for potential buyer. DEC will receive report by 4/1/05. 1/10/05-Vought-Spoke to Zeb Youngman and bedrock present at 16' below grade. If contaminated soil extends to bedrock then DEC will require well installation. 3/17/05-Vought-Received message from Paul Hatcher (Tyree 631-249-3150) who is working for seller who was requesting additional requirements. Vought instructed that water sample needs to be collected. Hatcher not sure if bedrock continues to 16'. Unsure of who will install well and Hatcher will contact Koon Tang with further info. 3/21/05 - Assigned to Alex Zhitomirsky for followup. - KST. AZ received this spill on 3/31/2005 from KST. Az contacted Paul Hatcher on 3/31/2005. They in discovered some soil contamination in one boring. The owner, Frank Murhy will install groundwater well. I instructed Paul Hatcher to install 3 wells. 3/31/2005 5-11-2005 Frank Murphy of Murphy Trucking Company left a message. I returned his call at 718-273-6209 (day phone 718-727-6312 did not answer) and left a message for him. AZ 5-11-2005 I spoke with Frank Murphy and requested to install 3 wells, take gw and soil samples and submit the report to DEC. AZ 5-16-2005 I spoke with Paul Hatcher (Tyree) and Linda Bolesta (perspective buyer t.718-447-7157) and requested to send existing Phase 1 & 2 Reports to DEC ASAP.AZ 5-24-2005 Reviewed Phase II Subsurface Investigation Report by P.W. Grossner submitted by Linda Bolesta, Goblin Lighting Service, Inc. 730 Richmond Terrace Staten Island, NY 10301, on May 19, 2005. DEC requested installation of 3 wells including one well near SB-2. In addition, separate gw samples should be taken at fill ports and dispenser islands. A letter was issued on 5-24-2005. AZ 12/1/2005 Tyree and drilling sub-contractor will be on-site on December 12, 2005, to install three monitoring

wells. It is anticipated that the job will take two days. Joseph Rennie - Project Manager The Tyree Company (tel. 631-249-3847 Ext.308). AZ 12/9/2005 Tyree and drilling sub-contractor will be on-site Monday December 12, 2005, around 10 AM to install three (3) monitoring wells. It is anticipated that this job will take two days to complete. Joseph Rennie - Project Manager The Tyree Company (tel. 631-249-3847 Ext.308). AZ 12/13/2005 Tyree is putting 3 wells there. AZ 4/4/2006 I contacted Tyree (Joe Rennie). Tyree gave the report to the perspective buyer Linda Bolesta 718-447-7157. AZ 8/3/2006 Called Linda Bolesta office. I inquired of the site status. Linda Bolesta will call me back. AZ 8/3/2006 Helene Catalano (Goblin Lighting Linda Bolesta's assistant). They called Tyree and asked them to send us a report. Paul Hatcher @ Tyree 631-249-3150. AZ 1/30/2007 I contacted Paul Hatcher(Tyree 631-249-3150) and requested a copy of the report. He will forward it to DEC. AZ 2/6/2007 Left a message for Frank Murphy with his grandson Michael Murphy. Frank Murphy called me back. I informed him that the contamination has to be addressed. He stated that he is looking for a buyer for the property. AZ 7-26-2007 I left a message for Frank Murphy. I sent an e-mail to V.Brevdo describing the situation and asking for directions. AZ 7-27-2007 Frank Murphy called be back and notified that he sold the property to Linda Bolesta. I contacted Linda Bolesta. She notified me that AADI, LLC 730 Richmond Terrace, Staten Island, NY 10301 718-447-7157 FAX718-720-5200 purchased the property from 730 Richmond Terrace Corporation, a.k.a.. Frank Murphy Trucking on July 12, 2007. The purchase of the property included taking on the liability and responsibility of the remediation and clean up of the existing spill. They are currently receiving estimates from environmental companies and intend to begin tank removal and spill remediation with the next several weeks. A letter was sent to DEC via fax. AZ 8-9-2007 Clint Williams (Compliance Monitoring Services 619-276-5470) called to discuss the status of the site. I stated that delineation of the plume should be the first step. Old wells should be re-developed and the results of the investigation together with remediation plan should be submitted to DEC. 11-7-2007 Chaim Mariategui-Levi (KLK Environmental Group LLC 973-445-0507 100 North Hackensack Avenue, South Kearney, NJ 07032 contacted me. He was hired as a contractor/consultant for the job. They will remove the tanks which they are detecting with metal detectors. They do not know if the tanks were closed. They will drum all the product and send it to a disposal facility. I requested that the contractors excavate all contaminated soil while doing the excavation and take end-point samples for volatiles/semi-volatiles. There are presumably one diesel and five gasoline tanks and one waste oil tank. They will take about 30 grab samples. They should prepare a plan with the sampling locations and take pictures of the excavation. Tank closure report should send to DEC. They will sample three existing wells after the tanks are removed. A closure report with photographs will be sent to DEC. AZ 12-03-2007 Spoke with Chaim Mariategui-Levi (KLK Environmental Group LLC 973-445-0507. They started excavation. The site is covered with concrete and the tanks were not cleaned and still contain some material. Before they remove the tanks they have to break the concrete. A Work Plan will be sent to DEC. AZ 8-6-2008 Contacted Chaim Mariategui-Levi (KLK Environmental Group LLC 973-445-0507. He will send me the information within next week. They will submit the hard copy and an electronic version. AZ 8-19-2008 Chaim Levi contacted me. He will submit to DEC the report(hard copy and the electronic copy) this week. The owner is

Linda Bolesta (718-447-7157). AZ 12-12-2008 Reviewed a report submitted by KLK in September 2008. Additional info/corrections needed: 1. site plan to scale should be submitted 2. Separate Tables for all analyzed VOC and SVOC contaminants should be submitted. The tables should include references to NYS Groundwater and Soil Criteria. Exceedances should be indicated in bold print. 3. All e-docs should be submitted in PDF format 4. Separate maps should be submitted for soil borings and gw wells. The maps should include gw flow direction and north arrow, and the total VOC/SVOC concentrations including the date of the sampling. All wells must be surveyed and groundwater flow direction determined. Off site wells might be considered. 12/15/2005 Discussed the results of the report review with Chaim Levi. He will resubmit the report with the requested corrections within two weeks. AZ 6-2-09 Called Chaim Levy e-mail address: chemica5@aol.com medusa2tsm@aol.com - Linda Bolesta (owner) e-mail. Called Linda Bolesta. Mr.Levi stated that he had a heart attack was sick for 3 month. I requested submittal of PDF files (3 volumes hard copy submitted in September 2008). Also, he needs to submit corrections to the report as discussed on 12/15/08. He will submit corrections and PDF files. Updated the owner of the site status. AZ 6-3-09 As per report dated 8-21-09 by KLK Environmental Group, the whole area adjacent to tanks westward was excavated. Excavation was performed to a depth of 14'. The maximum reading for benzene was 12.5 ppb. Samples were taken on 1/7/08. Sampling showed no detectable volatiles, except location T52 which had Benzene concentration of 312 ppb. A cubic yard of contaminated soil was removed from this area. 240 tons of concrete and 445.59 tons of contaminated soil was disposed. Five 550 gallons tanks, one 1,100 gallons tank and the piping were excavated. An e-mail was sent to Chaim Levi and Linda Bolesta: Dear Dr. Mariategui-Levi, I have reviewed report for the above site and discussed it with you on 12-15-2008. I requested some modifications of the submitted report and submittal of e-copy in PDF format. Unfortunately, the revised report and the e-copies in PDF format have not been submitted. As per our yesterdays's phone conversation, I reiterating my comments made on 12-15-2008: 1. Legible site plans and figures to scale should be submitted to DEC. The site plans and figures should show north arrow and predominant groundwater flow direction. Site plans and figures should indicate names of the adjacent streets. All site plans and figures should have titles and be numbered. Locations of soil and groundwater samples taken by KLK Environmental should be clearly indicated. 2. Separate tables for soil and groundwater should be submitted. The tables should contain results for all STARS list compounds. Tables 1 and 2 do not contain analytical results for all STARS compounds. The tables should compare actual laboratory results to NYS Groundwater and Soil Criteria. Groundwater results should be compared to Ambient Water Quality Standards and Guidance Values (AWQSGVs). Soil samples results should be compared to TAGM 4046 Recommended Soil Cleanup Objectives (RSCOs). Exceedances should be indicated in bold print. Total SVOC and VOC contaminant concentrations should be calculated for each sample which exhibited exceedances. 3. All e-docs should be submitted to DEC in PDF format 4. Separate soil contaminant plume figure and groundwater contaminant plume figure should be submitted. These plume figures should indicate groundwater flow direction and north arrow, and the total VOC/SVOC concentrations including the date of the sampling. Borings/wells/end point samples should be shown on the plume figures. End point

Total SVOC and VOC contaminant concentrations should be calculated for each sample which exhibited exceedances. 3. All e-docs should be submitted to DEC in PDF format 4. Separate soil contaminant plume figure and groundwater contaminant plume figure should be submitted. These plume figures should indicate groundwater flow direction and north arrow, and the total VOC/SVOC concentrations including the date of the sampling. Borings/wells/end point samples should be shown on the plume figures. End point sampling locations should be legible and indicated on figures/plans 5. All wells must be surveyed and groundwater flow direction determined. 6. Off-site wells should be considered. 7. A monitoring plan should be submitted. Groundwater monitoring should be performed. Sincerely, Alexander Zhitomirsky Engineering Geologist 2 NYSDEC Region 2 Division of Environmental Remediation AZ 5-20-2015 DEC received a report for this spill entitled Remediation of DEC Spill #0408050 and dated April 20, 2015. I have contacted Dr. Levi (KLK Environmental Group). I contacted Dr. Levi and discussed this report. It appears that three existing monitoring wells are installed upgradient and sidegradient of the former tank field. I requested that three additional wells are installed north, south and east of the former USTs. Dr. Levi will get back to me. AZ 5-27-2015 The following e-mail was sent to Dr. Levi and Ms. Linda Bolesta: Dear Dr. Mariategui-Levi, As per our telephone conversation, the existing contamination around the former tank field should be fully delineated. Please submit to DEC a work plan for the installation of additional wells. Sincerely, Alex Zhitomirsky 5-28-2015 The following

e-mail was received from Linda Bolesta on 5-27-2015: Dear Mr Zhitomirsky, Please see the attached letter that has been emailed and will be mailed certified to Chaim Mariategui-Levi of KLK Environmental releasing him and his company from representing us in the above referenced DEC matter. I am aware that you have recently responded to his report with further requests for remediation. Please forward those requests in writing to me, so that I may be able to proceed in investigating further representation. Thanking you in advance, Linda Bolesta AADI, LLC 730 Richmond Terrace Staten Island, NY 10301 -- Linda Bolesta Cell 917 439 8906 cell Direct Email - goblin.linda@gmail.com 10-20-2015 This property was bought. I was contacted by Jim DeMartinis Senior Hydrogeologist, Seaclyff Environmental, Inc., P.O. Box 2085, Miller Place, New York 11764, 631 828-5994, 631 742-6948 (cell). I called him and we discussed the site. He was hired by a new owner. He has not seen the remediation report yet. I advised him that he needs to obtain and study the report. The plume should be delineated and downgradient wells installed. He will get back to me. Also, he will send me contact information for the new owner. AZ 10-10-2015 Received a proposed work plan for the site via email: The new property owner of the site is: AAW Richmond Terrace LLC Danielle Gaxholli 34 Croton Ave Staten Island NY 10301 Phone: 347 489-1694 (husband Julian) I have contacted Jim DeMartinis, Senior Hydrogeologist, Seaclyff Environmental, Inc. P.O. Box 2085, Miller Place, New York 11764, 631 828-5994, 631 742-6948 (cell)), and we discussed the site. I stated that I would prefer 2 wells. Information regarding well development should be included in the report. One soil sample should be collected at the soil water interface. One soil sample with the highest PID reading should be collected for lab analyses. A plan from the old investigation could be used as a base for the plan indicating proposed well locations. Groundwater flow direction should be indicated on the plan. AZ 11-30-2015 Reviewed a work plan for this site. The work plan proposed installation of three wells. However, one of the proposed wells location was upgradient of the groundwater flow. Also, AST was shown on the plan but the former tank location was not marked as AST. I have contacted James De Martinis and we have discussed the site. The consultant will submit a revised work plan to DEC. AZ 12-28-2015 The following email was sent to Jim DeMartinis and V. Brevdo: Dear Mr. DeMartinis, I have reviewed a Work Plan for the above site, dated December 26, 2015. Seaclyff Environmental proposed to install three monitoring wells to delineate soil and groundwater conditions at the site. I concur with these proposals. This Work Plan is approved. The Responsible Party and its contractors are solely responsible for the safe execution of all invasive work performed at the site. AZ Alex Zhitomirsky 9-26-2016 Reviewed a monitoring report dated Sept. 24, 2016. On May 17 and August 24, 2016, the three new wells and MW-2 were purged and sampled using low flow methods. All wells were purged 3+ volumes via a Waterra inertial pump with per well dedicated tubing. The samples were analyzed at American Analytical Laboratories, Farmingdale, New York (NYSDOH ID #11418) for EPA Method 8260 analysis (CP-51 list). There were multiple exceedances in the samples collected from MW-4 (total VOCs-738 ug/l) and MW-5 (total VOCs-6,626 ug/l). MW-6 could not be sampled due to a parked car. Based on these results, the monitoring wells will be purged and sampled again in November 2016. AZ 1-12-2016 Reviewed a report dated December 14, 2016. Sampling event was performed on November 8, 2016. Three new wells installed at DEC's request were

COMPLIANCE AND EMISSIONS REPORTING

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Contact Name: CHRIS HOPKINS
DEC Memo: "1/19/06- DEC Piper spoke w/ USCG. A launch (RTC-1) had sunk along the facility. The capacity of the diesel tank is 200 gal. They are approximating that 100 gallons are on board. Currently there is a slight sheen on the water. The shoreline along the facility (SI side) has been impacted and adsorbants are spread out. They will be sending a diver down shortly to connect a crane cable to the boat so they may pull it out. I have contacted both the USCG and the Facility for this information and will contact me if there is a larger issue. They contacts are the USCG- 718.354.4353 and Chris Hopkins at the Reinauer Yard 718.816.8167 x 403. 1300 hrs update from USCG Petty officer Gould- As per conversation, the boat has been removed from the Kill and placed on blocks. Approx 1 gallon was lost and cleaned up w/ adsorbants. No significant impact. Closed by DEC Piper"

Remarks: "DUE TO SINKING OF A VESSEL, SOME SHEEN ON WATER, IN PROCESS OF GETTING A CRANE TO LIFT VESSEL OUT,"

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was RODRIGUEZ E2MIS 146517 12/29/02 ... 1445 hrs. Troubleshooter J. Ramm notified the Control Center that while responding to a hit pole c/o Lockman Ave. & Roxbury St., vehicle 50549 leaked hydraulic fluid from a fitting by the bucket. Approx. 1 Qt. of hydraulic fluid leaked onto the asphalt roadway beneath the truck and onto a parked 1989 Ford Taurus wagon, NY plate # BKR-4755. No sewers or waterways were involved. Other than the above mentioned auto, no private property was affected. There was no smoke or fire condition. Spill was contained by Mr. Ramm with pads and speedy dry and he will clean up the spill and attempt to find the owner of the impacted auto and perform a cleanup on the car....T. Bergendale # 23178. 12/29/03 ... 1610 hrs. Troubleshooter J. Ramm notified the Control Center that cleanup of spilled hydraulic fluid at Lockman Ave. c/ o Roxbury St. was completed at 1610 hrs. Mr. Ramm and employees R. Miller & J. Lindstrom performed the cleanup. An area of asphalt roadway approx. 2' x 2' was double washed with citrus cleaner and speedy dry was also used. The owner of the auto that was hit with hydraulic fluid was located. He is Mr. Felix Garriga of # 35 Lockman Loop, S. I. N. Y. Apt. A, Ph # 718-442-3357. The car was double washed with citrus cleaner and Mr. Garriga was advised to take the car to a car wash and submit receipt to Con Edison for reimbursement. One bag of debris was generated and will be disposed of as nonhazardous waste at Davis Ave. Truck was driven to Davis Ave. for repair of hydraulic system..... T. Bergendale # 23178. UPDATE 1/3/03 1155 Hrs. As per Transportation vehicle was repaired on 12/30/02 (fitting was repaired).."
Remarks: "LEAK FROM HYDRAULIC HOSE ON A BUCKET TRUCK. SPILLED ASPHALT AND A VEHICLE. HYDRAULIC LINE REPAIRED. BEING CLEANED UP. CON EDISON REFERENCE NUMBER 146517."

Hazardous Waste Summary:

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D008
. Waste name: LEAD

. Waste code: D018
. Waste name: BENZENE

. Waste code: D019
. Waste name: CARBON TETRACHLORIDE

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

DEC Memo:

"12/23/2016: Rashad EMIS 253292 Initial comments from 12/20: Arcangelo Coca (18335) reports 1 gallon of unknown oil on approx. 1000 gallons of water- contained. Env tag 101912 placed in manhole. NO COC# AVAILABLE - MUST CALL EHS CONTROL DESK BACK. Will test for PCB and Oil ID. Sure Access. COC #NT11035 for oil ID and PCB. Follow up comments from 12/22: paul kies (24732) called desk and indicated when structure was pumped dn 12/21/16 at 14:00 the structure was making water. clean harbors was on location and removed 11,000 gal water & oil delivered to clean water SI. 10,000lb of oily sludge was removed and transported to clean earth. There was a tank discovered in structure and hole was defaulted. Walsh, Paul 12/22/2016 5:16 PM request was made to paul kies to take water samples to test for sea water. 3/17/17 - Austin - Con Ed contained and cleaned up the spill, which lab results showed to be cable oil, and removed the cable joint regulator tank - See document files for further information - Spill closed - end"

DEC Memo:

"Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 4/12/04-Vought-Spill transferred from Tibbe to Rommel as per Rommel. 8/17/05 - Transferred to Filkins for Spills closeout initiative. 8/17/05 There is a file with several reports in it for this site. 3 wells were installed in April 2000 and they indicated a groundwater problem with BTEX up to 2ppm. Notes in the file(from Tibbe?) at that time indicated he wanted additional wells located off site. Spoke to Scott Vezzuto (718)442-9029 of Island Tech Auto which is located at the site. Mr. Vezzuto informed me that no additional work has been done since April 2000. However, Mr. Vezzuto says he has recently gotten a quote from a tank removal company that would also remove adjacent contaminated soils. He has considered going ahead with this work now, but would prefer to coordinate with DEC Spills to get all the work required to close out the spill completed at one time. Therefore, it sounds like this site needs more work than can be completed before the end of 2005 under the Spills Closure Initiative, so is a site will be left open. Recommend Mr. Vezzuto be contacted by Spills since he has indicated a willingness to proceed in this matter. 9/7/06 - Austin - Assigned from Albany to Region 2 staff (Rahman) for review and closure - end 05/11/07 File available, currently reviewing.(SR) 03/24/09 Letter was sent asking to perform subsurface investigation for current status of the site. Significant soil and ground water contamination was discovered before.The letter was sent to Richmond Tech Auto Inc 135 Morning Star Rd Staten Island, NY 10303-2811 Attn: Scott Vezzuto (sr) 04/29/09 Rec'd request for an extension from Scott Vezzuto.(sr) 5/30/14 - Austin - Spill transferred from Rahman to Mahat to secure above referenced reports (eDocs only shows a nioremediation proposal, no site specific data) from Rahman, if available, reviewing, and discussing closure options with supervisor - end 3/31/16: Mahat DEC Mahat reviewed the report, Spill case will be closed on NYSDEC database admistratively due to limited report and lead on the spill case. "
