Health Problem: the exact depth and areal extension of the contaminants. Public access to the site is restricted. However, persons who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE 8/24/99 3:30PM Comenale on site: Weather 85 degrees F sunny Observations: Statent Island Towing Inc.(SITI) located at the spill address is a towing/storage facility with 10 trucks. Interviewed: Clement (Chubby) Marotte (Manager of SITI for the propety owner Andrew Liberman) The former manager John Sinclair (Spill Caller) indicated 100 Gal Diesel Spill on 8/23/99 (9906183) then 8/24/99 reported 100 gal gas (9906156) Upon site visit and thourgh site tour Comenale noticed NO evidence of gasoline on site. However a 1800 gal diesel storage 10 Wheeler located in center of sercured yard has over time (years)accumulated substantial stone and ground staining. Remediation of staining must be performed. SITI has equipment to do the work and will. Note: Many (500-1000)small vehicle releases Some (4or5) drums onsite. 4 New oil and one unkown contents that will be removed. A 275 gal waste oil tank was also identified. Two storm sewers(? looked like). One with staining around it. The second where vehicle wash and/or degreasing was occurring. Hose and pressure washer with soap and/or solvent and pools of water on ground during tour. Notified Marotte of the the following: 1) House keeping is terrible. 2) Stockpile all contaminated soil on poly. 3) Cover nightly. 4) Test and manifest for disposal with receipt. 5) End point samples will be required by NYSDEC. 6) Future new tank with containment. 7) Stop wash and work near sewers. 8) Continue with contracted waste oil hauler 9) No action or direction on small releases. 7 day return visit to check progress David Comenale 8/25/99 9:00 am MANY RETURN VISITS HAVE OCCURED AND ON 12/7/99 THEY HAVE FINALLY REMOVED THE OIL TRUCKS AND CLEANED UP THE FACILITY."
Remarks: "subj states that the above business has a tank truck that they use to fill there tow trucks the tank on the truck is leaking spill to soil on the above lot "

DEC Memo: "01/26/12-Hiralkumar Patel. 9:10 AM:- visited site. met with John at Staten Island Towing. walked through entire lot. no sign of spill found. found some water puddles throughout the property, but no sheen on water. John suspects that the spill was reported by a recently fired employee. case closed."

Remarks: "The following information was received from the complainant via e-mail either through the DEC public website Report an Environmental Violation Online page or directly to R5 dispatch mailbox: Who Did It: Staten island towing. 228 Granite Ave, Staten Island NY What Occurred: The company is dismantling heavy machinery in their yard. While doing so all the fluids are being drained into the ground. Every time it rains in the yard the puddles are rainbow colored and getting on everyones clothes and shoes. Also they do nothing to clean up after cars that were involved in accidents, so those also are leaking oil gas and antifreeze into the ground. They charge the customes 650cash for hazmat cleanup yet they don't clean up When Did It Occur: This happens repeatedly. County: Richmond Municipality: staten island Location Or Address: 228 Granite Ave How Did It Occur: Additional Details: When you walk through the front gate, walk

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Tank Info:

Tank Number: 1
Tank Id: 216720
Material Code: 0022
Common Name of Substance: Waste Oil/Used Oil

Equipment Records:

G02 - Tank Secondary Containment - Vault (w/access)
L02 - Piping Leak Detection - Interstitial - Manual Monitoring
E00 - Piping Secondary Containment - None
K01 - Spill Prevention - Catch Basin
D01 - Pipe Type - Steel/Carbon Steel/Iron
I01 - Overfill - Float Vent Valve
A99 - Tank Internal Protection - Other
C01 - Pipe Location - Aboveground
B99 - Tank External Protection - Other
H06 - Tank Leak Detection - Impervious Barrier/Concrete Pad (A/G)
F03 - Pipe External Protection - Original Impressed Current
J02 - Dispenser - Suction Dispenser

Tank Location: Aboveground - contact with impervious barrier... Tank bottom rests on impervious barrier, allowing visual indication of leaks.
Tank Type: Steel/Carbon Steel/Iron
Tank Status: Temporarily Out of Service
Pipe Model: Not reported
Install Date: 03/12/2007
Capacity Gallons: 250
Tightness Test Method: NN
Date Test: Not reported
Next Test Date: Not reported
Date Tank Closed: Not reported
Register: True
Modified By: MSBAPTIS
Last Modified: 04/14/2017
Material Name: waste oil/used oil

Hazardous Waste Summary:

- . Waste code: B002
- . Waste name: Petroleum oil or other liquid containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.
- . Waste code: B007
- . Waste name: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 2
DER Facility ID: 125972
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was DEMEO Spill transferred to Greco in July, 2005 as part of Spills Closure Initiative. Greco called tank test company and left a message to be called back. JDG 7/21/05 Called tank test company again. They will have Phil call me back. JDG 8/3/05 11/21/05 Called Phil and determined that he was not the cleanup contractor. I then called Mr. Rucci, who delivers oil to the church, he was able to tell me that work was performed by Hydrotech Enironmental (631)462-5866. 11/21/05 I called Hydrotech. Rachel will call me back with info. JDG 11/25/05 Rachel of Hydrotech sent in a report showing that four soil borings placed around the tank indicated no detections of contaminants above the reporting limit were present. All four borings were deep enough to have been below the tank invert (i.e., the boings ranged from 12 to 16 feet in depth, which should be well-below any 2500 gallon tank), however none of the borings are reported to have intercepted the water table. Based on the analytical results, it appears that any release that occurred was relatively small. The leaking tank has been closed, and two new ASTs are now used to service the buildings heating requirements. Since there does not appear to be a significant problem, the spill is CLOSED. JDG 11/25/05 "
Remarks: "u/g tank failed test tank will be uncovered and retest a temp tank will be brought in also "

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
Used oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

. Waste code: B004
. Waste name: PCB articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.

. Waste code: B007
. Waste name: Other PCB wastes, including contaminated soil, solids, sludges, clothing, rags and dredge material.

DEC Memo:

"12/23/09-HRAHMED-Spoke to Robert of Clean Water. As per him, they were cleaning up a vessel. One of the gasket was loose and let oil go in the water. Approx 30 gal #2 fuel oil spill in water. They put sweeps and absorbent pads. Coast Guard responded. Spoke to Weitkamp of USCG. As per her it is more than 50 gal. Coast Guard asked Clean Water to deploy hard boom to contain. Miller is responding to the site for cleanup and Clean Water is arranging hard boom. Responsible party: ROBERT SALERNO CLEAN WATERS OF NY Phone: (718) 981-4600 Coast Guard on Spot: Weitkamp 917 597 6423 or 347 582 8257
12/24/09-Hiralkumar Patel. visited site at 4:45 PM on 12/23/09. met Bob Salerno from Clean Waters of NY. Bob mentioned that they were cleaning up 80,000 barrel barge and oil tank had 12 compartments. they used water to wash compartments and were removing oil/oil sludge/water using vaccum truck. while cleaning up last compartment, oil started leaking, into water, from a borken coupling on a 3 inch transfer line. cleanup started around 9 AM on 12/23/09. barge was located at 2945 Richmond Terrace. spilled oil travelled about 200 yards in water and naturally collected in corner along barge at 2877 Richmond Terrace (Sterling Equipment Inc., 718-273-6512). met John Namako from Coast Guard at the site. John mentioned that oil might have leaked for about 2 hours and impacted two areas: first where it

started at 2945 Richmond Terrance and second spot was along barge at 2877 Richmond Terrace. John checked other areas and no oil found other than these two locations. Coast Guard is estimating lost of about 600 gal. Miller Environmental was doing cleanup using vaccum truck/sweep. cleanup was mostly done at the source site at the time of site visit. Miller deployed set of hard boom and sweep. visited site again this morning at 8:30 AM. met Mark Hansen from Clean Waters. inspected both areas. observed only sheen on water. also observed some snow area on land impacted due to foot traffic. asked Mark to remove impacted snow/soil/stones from both sites. Coast Guard asked to keep layer of sweep along bulkhead to capture any oil come out from area under the bulkhead. John Namako Coast Guard PH. (347) 582-8257 Clean Waters of NY, Inc. **responsible party** 3249 Richmond Terrace Staten Island, NY contact: Robert Salerno Ph. (718) 981-4600 (O) (917) 731-7308 (C) Mark Hansen Clean Waters of NY PH. (917) 560-7678 (C) will visit site again in morning on 12/28/09 to confirm cleanup of impacted soil/snow. 12/28/09-Hiralkumar Patel. 8:30 AM:- visited site. inspected both source and impacted areas. impacted material removed from both areas. no sheen found on water at impacted site 2877 Richmond Terrace. found some non-recoverable sheen around barge at source site. need to visit site again after a week and may require additional investigation, if more sheen observed. 01/06/10-Hiralkumar Patel. 8:15 AM:- visited site. no sheen observed on water. case closed."

Remarks:

"fuel lost during vessel fill up; contained. Clean up in progress."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was O'CONNELL e2mis no. 143-672: SSO Ed Fry reports 4 ounces of transformer oil spilled from transformer # 22 East at Fresh Kills S/S. The leak is located between the selector compartment and the main body. Leak is on blue stone. Leak is immeasurable and marriage roll was installed under leak to contain and absorb it. SSO Ed Fry reports lab sequence # 02-04470-001 main body, 02-04470-002 selector compartment, 02-04470-003 contactor compartment, all less than 1 ppm dated 5/19/02. Cleanup will be handled by maintenance as less than 50 ppm. 9/27/02 13:47 LSN # 02-04470-001 As per written confirmation from J. Cona # 52581, the cleanup supervisor, on 7/01/02 from 8:15 to 9:00 removed all visible traces of oil and used absorbents to remove all residual fluids. Oil pads and simple green were used to wipe up the area. Maximo # 166893 was issued to capture the repair. UPDATE 5/2/05 Supervisor H. Lauro states on TR#22 belly band was replaced by SSO-M. Leak was coming from the belly band. W.O. 304615 & 308457 indicates that work was done. Pete Sudol and myself inspected TR#22E and no leaks on TR at this time. Mechanics J Kournidakis #166893, Brendon Kane 00358 and C. Koehler # 83984 worked on TR#22 E according to Maximo all work was completed 3/30/05. Incident submitted for closure."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was FOLEY Con Ed e2mis #147372: Phillip Hogan of SSO reports 1/2 gal of dielectric fluid spilled from Circuit Breaker 23S while performing maintenance. Fluid leaked onto blue stone at Fresh Kills S/S 33KV. No sewers or waterways affected, no smoke or fire. Leak is stopped. Cleanup pending. 3/7/03 13:00 As per. H. Lauro, #49657, the cleanup supervisor, on 3/3/03 from 16:05-16:40 had Monasseri # 81886 and Mee # 20130 remove/ recover all liquid and solid waste. The crew removed all visible traces of oil and excavated all contaminated soil/bluestone. The generated waste was placed in a 15 gallon drum. Maximo # 0000198981 was issued to capture all repair work done to repair the source of the leak. UPDATE 5/27/04 09:17 H. Lauro states that all clean has been performed by mechanic Mee #20130 all visible traces of oil have been removed. Repairs to CB#23S have been completed. P. Sudol and myself inspected area and area is clean. Leak closed."

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F004
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: K049
. Waste name: SLOP OIL EMULSION SOLIDS FROM THE PETROLEUM REFINING INDUSTRY.

. Waste code: K051
. Waste name: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

. Waste code: U002
. Waste name: 2-PROPANONE (I) (OR) ACETONE (I)

. Waste code: U019

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was TIBBE 11/28/94: REASSIGNED FROM SIGONA TO ZHITOMIRSKY ON 11/28/94. tranfered from Hale to Tibbe on 12/27/00. tanks repaired/replaced/upgraded. See also 0000185 & 9104120. 11/12/10 - spill re-assigned from Tibbe to Joe O'Connell 5/19/2011 The spill was reassigned from Joe O'Connell to Linda Ross 2/27/12 - Raphael Ketani. This case was reassigned to me during February 2012. Monthly progress update meetings continued. 4/26/12 - Raphael Ketani. The bioremediation system was shut down with DEC approval on 7/14/11. Quarterly soil and groundwater sampling was continued by URS. Groundwater impacts are minor, but some soil exceedences were still present. The contact person at the NYCT is Gregory Mathelier, Construction Administrator, UST & Environmental Remediation Program, MTA NYCT, 2 Broadway, D2.91, NY 10004, 646-252-3470/646-879-1970, GREGORY.MATHELIER@NYCT.COM. 10/24/12 - Raphael Ketani. A site visit was set up for October 29 at 2PM. Later, Mr. Mathelier called me. He said that there was a problem at the bus depot due to waste oil spillage. URS had done some borings to delineate the contamination and all of them turned out to be hot. They will do more borings and will install at least two monitoring wells as per the request of DEC. URS will try to do more borings and find clean soil. 10/29/12 - Raphael Ketani. The planned site visit did not take place due to scheduling conflicts. It will be rescheduled for some time in the

future. 3/6/18 - Raphael Ketani. I reviewed the Dvirka & Bartilucci February 2018 Confirmatory Soil and Groundwater Investigation/Petition for Spill Closure Report dated 3/5/18. Groundwater exists at 1.5 to 4 feet bgs. Flow is to the north. During July 1991, 11 USTs belonging to the diesel fuel system failed their tightness tests. These 11 USTs were closed and replaced during 1993. An estimated 3750 to 7500 gallons of fuel leaked into the subsurface. A remedial investigation was undertaken by URS from March to April of 1992. This was Phase I. A second investigation took place from June to December of 1993 and was called Phase II. Free product was found on the water table. A 2 well recovery system was installed. The recovery system operated from February 1996 to October 2001. After this time, free phase pumps, hand bailing and oil absorbent socks were used to recover additional product. Approximately 9563 gallons of product were recovered. Monthly groundwater monitoring took place starting during January 1999 and ended during June 2017. Free product was seen in wells W-1 and W-2. These wells were located in the vicinity of the fill ports. It was found that the fill lines had been leaking. The USTs were taken out of service and the piping was repaired. Product was recovered with a vacuum truck. During January 2000, URS installed 7 additional soil borings and 5 new wells due to the fill port leaks. Five additional borings were installed during March 2003 by URS in order to delineate the subsurface soil impacts. It was determined that extensive contamination was present below the site. During 2004, NYCT, URS and the DEC agreed that a full investigation would be needed to determine the extent of the contamination and the technology that would be effective to remediate the spill. A SSIWP was submitted by URS during June 2004 in order to determine whether in-situ remediation would work. The investigation took place during August 2004. Based upon the results, URS submitted a Site Specific Remedial Plan in February 2005 involving bioremediation. The DEC approved the plan in April 2005. Construction of the injection/recirculation remedial system proceeded from April 2007 to October 2007. The system was started during November 2007. The system was comprised of an extraction gallery of 5 pumping wells and two five well injection galleries. The second injection gallery was in the middle of the historical spill area. Oxygen, bacteria and nutrients were added to the treatment solution before it was re-injected. Since startup, about 1 million gallons of treatment water was injected into the subsurface. From May 2008 to January 2012, soil and groundwater samples were collected on a quarterly basis to determine the effectiveness of the remediation method. The results showed that the method produced insignificant reductions in the contaminant concentrations. This led to the DEC approving the plan to shut down the remediation system. The system was shut down on July 14, 2011. URS collected 6 soil samples from 3 sampling points on January 23, 2012. These locations were inside the depot building and through the sidewalk just east of the depot. The depth of sampling at each location was from 3.5 to 5.5 feet and from 5.5 to 7.5 feet bgs. Several VOCs were detected at concentrations exceeding their CP-51 SCO standards. However, the SVOCs were either above or below their standards. Groundwater was sampled from January 23rd to the 25th during 2012. Twenty one wells were part of the sampling array. Wells W-14 to W-16 and W-18 were not part of the array as they contained free product in the form of sheen. The results showed that the VOCs were almost entirely below the GA standards. The SVOCs were either non-detect or below their standards. Product recovery at the site was

S101340952

very successful. By June 2017, the recovery system, vacuum extraction, the installation of socks and the use of free product pumps had allowed for the collection of 14,933 gallons of fuel. No sheen was seen in W-14 and W-16 during 2017. The product thickness in W-18 decreased to 0.01 feet by June 1, 2017. A confirmatory soil and groundwater investigation was conducted by Dvirka & Bartilucci (the succeeding consulting company) and took place during February and March of 2017. Three soil sampling locations previously used by URS in the eastern part of the depot building and the sidewalk were used. Thirty one site wells were also sampled as part of this investigation. Well cleaning activities took place at W-14 and W-18. Thirty one monitoring wells were sampled from March 3rd to the 10th during 2017. W-18 had 0.06 feet of product and was not included in the sampling program. Also, PW-01 was obstructed and could not be cleared. The data packages were reviewed in order to assure that they met the DEC QA/QC requirements. Data validation was also performed. As a result of the data validation process, all of the analytical results were determined to be valid. The soil samples were comprised of light brown and brown silty sand with gravel and clay. Slight petroleum contamination was noted via odors and sheen. The affected depths were from 3.5 to 7 feet bgs. The PID detections were from 4.4 ppm to 287.5 ppm. Sheen was present at 4.5 to 6 feet bgs. The soil VOC and SVOC results were either non-detect or below the CP-51 SCOs. Groundwater VOC exceedences were slight to moderate in only 7 of the 31 samples. Wells in the eastern part of the depot building or in the sidewalk had one to two analytes with slight exceedences of the GA standards. Well W-15 in the center of the depot had the highest analyte concentrations and the greatest exceedences. However, the total VOCs concentration was 237 ppb. Since the July 2010 groundwater sampling round, analyte concentrations have been consistent in W-15. Analyte concentrations in the other wells have also been consistent or decreasing. SVOCs have been either non-detect or below their GA standards. Dvirka & Bartilucci recommends that no further investigation or remediation activities take place at the site. They petition that the spill case be closed. They add that the residual soil contamination is not contributing significantly to the contamination of the groundwater. They estimate that the risk of exposure to the residual contamination is low to none and there are no sensitive receptors in the vicinity of the depot. 3/7/18 - Raphael Ketani. Based upon my review of the information and data in the D&B February 2018 Confirmatory Soil and Groundwater Investigation/Petition for Spill Closure Report dated 3/5/18, I determined that the spill has been remediated to the extent feasible. Also, based again upon the information and data in the report, I determined that the residual contamination will not be a threat to the public or the environment. Therefore, I wrote and sent a Spill Closure Letter with the effective date of closure as 3/7/18."

716-856-5636 has been hired to deal with the stain under the tank. 5/19/2011 Site transferred from Joe O'Connell to Linda Ross 2/27/12 - Raphael Ketani. The case was transferred to me during February as part of a case realignment. The case involved a leaking waste oil UST fill port sump. Soil contamination is known and groundwater contamination is suspected. An investigation will take place. The contact person at the NYCT is Gregory Mathelier, Construction Administrator, UST & Environmental Remediation Program, MTA NYCT, 2 Broadway, D2.91, NY 10004, 646-252-3470, GREGORY.MATHELIER@NYCT.COM. 6/25/12 - Raphael Ketani. I received the Site Specific Investigation Work Plan dated 6/12/12. I began my review. The Work Plan was found to be acceptable. The investigation will take place 30 days after receipt of the DEC approval letter. The investigation report will be submitted 180 days after the investigation is completed. I submitted a draft approval letter to Hassan Hussein, Chief of the Hazardous Materials Unit. He approved the letter and it was sent out. 10/24/12 - Raphael Ketani. A site visit was set up for October 29 at 2PM. Later, Mr. Mathelier called me. He said that there was a problem at the bus depot due to waste oil spillage. URS had done some borings to delineate the contamination and all of them turned out to be hot. They will do more borings and will install at least two monitoring wells as per the request of DEC. URS will try to do more borings and find clean soil. I re-reviewed the Site Specific Investigation Work Plan dated 6/12/12. The plan was to conduct only delineation borings and only around the waste oil UST. Some groundwater sampling will take place. 10/29/12 - Raphael Ketani. The site visit did not take place due to scheduling conflicts. It will be rescheduled for some time in the future. 7/21/15 - Raphael Ketani. I reviewed the 7/15/15 Petition for Spill Closure Report, Waste Oil UST Area, Castleton Depot. During February 2011, the 1000 gal. waste oil UST system was integrity tested. It failed the test. The leak was traced to the fill port sump. Oil contaminated pea gravel was found and subsequently removed. An investigation took place. Twelve soil borings were attempted from 10/22/12 to 10/25/12. Four borings hit refusal at 4 feet bgs and couldn't be completed (B-2, B-2A, B-2B, B-2C). Most of the other borings were completed to 9 or 10 feet bgs. Two borings were turned into wells. Fill was encountered at all locations and was underlain by native soils at B-1, B-3, and B-4 to B-8. Groundwater was found to be at 5 feet below grade. A sheen was seen on the groundwater at B-1 and B-6. Oil staining on the soil and odors were reported at B-4 (W-26) at 9 feet bgs, at B-7 at 7 feet bts and at B-8 (W-27) at 9 feet bgs. W-26 and W-27 were checked on 10/25/12 and on 11/8/12, but product was not seen on the groundwater. The soil samples for most of the borings were taken at 7 feet bgs or deeper, below the smear zone. The VOC results are almost entirely non-detect for all the samples as a group. The SVOC results for most of the samples are either entirely or mostly non-detect. Groundwater results were not provided in the report. I disapproved the report as it was deficient. First, there were no groundwater results even though sheen was seen on the groundwater at the locations of B-1 and B-6. Secondly, the soil samples were mostly taken at 7 feet below grade or lower, which is below the water table at 5 feet. One would not expect to find contamination below the water table unless it fluctuated up and down. The report doesn't indicate that there are fluctuations. So, the samples were taken too deep (and too far away from the fill port as with B-8 and B-8A) and that is why the results are so clean. Lastly, Figure 3 does not show the location of the fill port sump. So

it is hard to judge whether the borings are in the right locations in order to encounter any possible spill. It is not clear in Figure 3 what the circle with the line extending from it to the tank represents. These features need to be labeled. 2/7/18 - Raphael Ketani. On 2/6/18, I received the NYCT Castleton Depot Revised Waste Oil Spill Area Closure Request Letter dated 2/6/18. I reviewed the document. As stated in the letter, the fill port was constructed with a sump for the purpose of containing any overflow during a fuel delivery. However, the sump failed a tightness test during February 2011. The amount of the spill was unknown. Two feet of contaminated pea gravel was removed. Soil borings and wells were installed in the vicinity of the UST and the fill port sump. Based upon the information obtained through the investigation, it was determined that the spill was confined to the soil and pea gravel in the sump adjacent to the UST. The most contaminated material was removed during the fill port sump remediation. URS (the previous consultant) had recommended that no additional remedial action take place. In response to the Department's rejection of the 7/15/15 Petition for Spill Closure Report and comments, the NYCT stated that sheen was seen in borings B-1 and B-6, but wells W-26 and W-27, which were installed next to them, did not have sheens during the 56 monitoring events that began the month of November 2012. Dissolved phase groundwater samples were collected from all of the site wells during March 2017 by staff from Dvirka & Bartilucci. The samples from W-26 (for VOCs and SVOCs) and W-27 (for VOCs only) did not exceed the NYS GA standards (TOGS 1.1.1 standards) and were mostly non-detect. The majority of the borings had been installed close to the waste oil UST top slab. Soil samples had been collected from the most contaminated horizon at each boring or well location. So the samples were usually collected from 7 to 12 feet below grade, which was about 2 to 7 feet below the water table. NYCT noted in the letter that if the spill from the fill port sump had been significant, then one would have seen floating product and heavy staining at the shallow depths of the water table (4 or 5 feet below grade). However, this was not evident. Additionally, there was no evidence of notable water table fluctuation. So the deeper horizons could not become contaminated by the sump spill. The NYCT believes that the contamination found at depth is related to other spills at the depot, not from the waste oil UST system. Attachment 1 of the letter contained Figure 1 and showed a circle and line which extended to the north of the waste oil UST and demarked the fill basin. I noted that B-6 was 15 feet away from W-26 and that B-1 was about 8 feet from W-26. W-27 was about 20 feet from B-1 and about 17 feet from B-6. So these wells were not next to B-1 and B-6. However, given that the groundwater analytical results for the samples from W-26 and W-27 were so low, I did not see the need to pursue further subsurface investigative work. I found NYCT's responses to my previous comments regarding the 7/15/15 petition for spill closure report to be acceptable and to consist of a satisfactory basis for closure of the spill (#1011475). Therefore, I determined that any residual contamination would not be a threat to the public or the environment. I closed the spill effective today and sent a Spill Closure to Mr. Mathelier of the NYCT. "

S104073346

Port Richmond Avenue and according to tyree report their tanks were abandoned in place. Removal of twelve (550-gallon) gasoline USTs, one (550-gallon) fuel oil UST and one (550-gallon) waste oil UST. Installation of four (4000-gallon) gasoline USTs in Aug 1998. Ten endpoint soil samples collected (analyticals provided). Soil analyticals indicated concentrations up to 980ppb benzene (S3), 71800ppb toluene (S4), 27000 ppb napthalene (S4) and 19400ppb MTBE (S7). 949.93 tons of impacted soil were removed from the site (disposal manifest provided). Visible holes in two (550-gallon) gasoline. Quarterly Monitoring Reports-May 2002 thru July 2002-Three monitoring wells installed-Groundwater concentration up to 1090ppb benzene (W2), up to 11300ppb xylenes (W2) and 74ppb MTBE (W2). Groundwater flow to the southeast. Letter to NYSDEC-October 15, 2002-Tyree Brothers-Letter states that there appears to be an off-site source of contamination...(380 Port Richmond Avenue) which has twelve (550-gallon) gasoline tanks closed in place in 7/98. Tyree will continue to remove product weekly from Well W-2. Quarterly Monitoring Reports-Nov 2002 thru April 2003-Three monitoring wells installed. Groundwater concentration up to 17ppb benzene (W2), up to 103ppb xylenes (W2) and 119ppb MTBE (W2). Groundwater flow to the east. 6/27/2003-Vought-Due to heavy soil contamination (see Tank Closure Report) found during tank excavation and holes in two on-site tanks, Getty is also responsible for spill. NYSDEC requires wells/borings east and south of tank pad, between tank pad and well (W2) to confirm off-site source of contamination in W2 and surrounding area site plan. Vought searched Spills and PBS database and found no record of 380 Port Richmond Ave. Vought Searched Tax database and found site info of (Bill Zeena Servicercenter-380 Richmond Avenue, Staten Island, NY 10302-1711). Stipulation agreement, CAP, guidance document and cover letter sent out as per NYSDEC Rommel with submission deadline of 7/21/03. 7/2/03-Vought-Sent email to Tyree repeating discovery of holes in tanks upon excavation, requirements of delineation. 8/5/03-Vought-Email from Lindell (consultant for Getty) We would like to hold off executing this STIP until this potential issue is resolved and we hear back from you confirming the current conditions at the site. 8/22/03-Vought-Email from Hatcher (Tyree). There is a former gas station across Port Richmond Avenue from 387 Port Richmond Ave, known as: Zeena's Service Center 380 Port Richmond Avenue Staten Island, NY 10302 718-448-0683 Quarterly Monitoring Reports-May 2003 thru Oct 2003-Three monitoring wells onsite. Groundwater concentration up to 17ppb benzene (W2), up to 103ppb xylenes (W2) and 119ppb MTBE (W2). Groundwater flow to the east and to the southeast. Water at a depth of 20-23' below grade. Groundwater analyticals show 140ppb benzene(W2), 2080ppb toluene(W2), 11400ppb xylene(W2) and 125ppb MTBE(W2). 4/29/04-Vought-DEC requires: 1)Continued groundwater monitoring and sampling at 387 Port Richmond. DEC will not require Stipulation Agreement until Zeena's Service station is investigated. Vought called Bill Zeena(718-761-3801), informed him of requirement of performance of soil and groundwater assessment via submission of tank closure report and sent letter to him requiring same on 4/30/04 with a performance deadline of 6/15/04. 4/21/05-Vought-Received message from Brian McGinn (718-702-2589) requesting site status. Vought called McGinn and left message to return call to DEC. 4/29/05-Vought-Received message from Brian McGinn. Vought returned call and work will be performed in June or July. McGinn will call back with contractor name. 08/31/2005 - Feng - Project transferred from Vought to Feng. 10/31/2005 - Feng -

Quarterly Monitoring Report, 8/2005 - 10/2005. 3 monitoring wells onsite, groundwater flows to southeast at depth of 26.82' to 28.71' below grade. W-1, increasing in MTBE, 22 BTEX and 2,320 MTBE. W-2, increasing in BTEX, 12,502 BTEX and 16 MTBE. W-3, MDL most of the time, 4 BTEX. 12/19/2005 - Feng - off site source checked, spill 04-30007 @ 380 Port Richmond Ave. There are 12 (550-gallon) USTs closed in place. Zeena submitted the SIR of 6/29-30/2005. Soil and GW results show extremely high BTEX concentration around the tank field area. GW was found to be ND Benzene, 1,810 Toluene, 1,940 Ethylbenzene, and 8,080 Xylene. DEC Andre Obligado, project manager will contact the owner to install the monitoring wells onsite and further remediation.(RJF) 2/27/2006 - Feng - Quarterly Monitoring Report, 11/2005 - 1/2006. The site is currently an active Getty gasoline retail station. Groundwater flows to southeast at depth of 23.24 to 26.44' bg. 3 monitoring wells onsite. W-1, decreased and 16 ppb BTEX, decreased and 261 ppb MTBE. W-2, sharply decreased and 3,923 ppb BTEX, MDL MTBE. W-3, MDL BTEX and MTBE. (RJF) 3/13/07-Sun-Based on the Quarterly Report, dated February 2007 for the period November 1 2006-January 31,2007,total BTEX ranged from Non-detected to 54.5 ppb, and MTBE ranged from Non-detected to 10.8 ppb. No free product was detected in any monitoring wells. Based on these low concentrations of BTEX and MTBE and continued downward trend in concentrations of BTEX and MTBE and Sensitive Receptor Survey conducted for this site, the spill is closed and NFA letter will be issued. (Sun) "

Remarks: "SOIL CONTAMINATION FOUND DURING STATION UPGRADE. SOIL TO BE STOCKPILED AS NECESSARY."

DEC Memo: "1/9/13-Vought-Primary off-hours responder during initial spill call. Vought performing complete note and e-doc entry to date in chronological order. No note entry to date due to extreme workload and function as State-On-Scene Coordinator (SOSC) in Unified Command (UC). SATURDAY, 12/15/12: Documents in E-docs: ICS 214 for multi-agency helio overflight UC Open Action Tracker DRAFT General Operations Shoreline Treatment Recommendations and Goals 9:00am-Vought-Primary off-hours responder called Caller (David Malik Boston Marine Ph:617-645-6870) and spoke to Joe DeConsolo and spill is contained and Millers Launch is responding and approximately 2500ft of boom in place and USCG doing flyovers. Boom also being placed around Shooters Island, 3 vessels and skimmer are on-site. Spill occurred during fuel transfer and no amounts yet on estimate spilled and transfer took place on finger pier by Mays Shipyard. A command center is being set up. Vought called USCG Command Center (Ph:718-354-4353) and spoke to Petty Officer (PO) Sebor and he noted that spill extended east of Mays Shipyard down to Verranzano and confirmed shoreline impacts, command center set up and helio overflights. Vought called and spoke to RSE who authorized DEC Vought and DEC Demeo to respond. 9:30am-Vought-DEC Austin gets report via OEM Notify hotline that The USCG is operating at the above location for a # 6 (diesel) fuel oil spill from a barge located at Mays Ship Repair into the Kill Van Kull. The USCG reports approximately 147,000 gallons have spilled into the waterway; it is undetermined at this time whether the spill has been contained. THE USCG Pollution Strike Team is operating at the location; FDNY FDOC, NYPD OPS, DEC, DEP and DOH have been notified. OEM is en route. RSE to mobilize to Command

S112810162

Post along with DEC Vought and DEC Demeo will be performing shoreline surveys. Vought participated in multi-agency helio overflight of spill area with NJDEP Pearson, USCG Miller and Gallagher Representative (Tom Wiker). 10:00am-Vought-DEC Farrar sends email to Commissioner Martens and DEC Schick with summary of information received and note that he also received word from NJDEP regarding spill as well and that Region 2 will be responding. USCG Capt. Robert Tarantino (Chief of External Affairs) sent an email to Larry Schwartz regarding spill and Schwartz forwarded email to Commissioner Martens who sent inquiry to DEC Schick who send inquiry to RSE. DEC Hale sent email that Just received an update from LCDR Greenbaur who confirms a major spill in the Kill Van Kull. Initial estimates suggest a potential spill of 147,000 gallons of #6. OSRO Miller Environmental is on-scene working for the RP reported to be May's Marine. More top follow as it becomes available. NJDEP Pearson noted via email that Thanks, I just spoke to USCG on site, they indicated a tank was holed, not due to a transfer, I have guys going to the site and Sector NY. 11:00am:-Vought-DEC Farrar sent email to all that I just received a call from Capt. Loebel. Gary, he'll be calling you next. He is on scene at Richmond Terrace with Cmdr. Doucette of the Atlantic Strike team. He related that a good portion of the spill is caught up in the finger piers of the facility. The quantity spilled is significant, but it's too early to put a quantity to it. It is still believed to be no more than the capacity of the affected tank (147K gallons). I told him that our Region 2 folks should be there shortly. Capt. Loebel stated that they were ready to go to 24 hour operations if needed. 11:15am-Vought-Arrival at Incident Command (IC) set up at USCG Ft. Wadsworth. Pictures available from helio overflight show oiling and sheening from Verrazano Bridge to Mays Shipyard and next Unified Command Meeting to take place at 1300 Hours. OSRO's on-scene include Miller On-site, Ken' Marine. Incident Commander is USCG Capt Gordon Loebel. 3000ft of boom in place at Mays and 10,000ft of boom placed around Shooters Island and heavy oiling in Mays Shipyard at spill site which is across from Shooters Island. USCG Atlantic Strike survey teams are being deployed via landside for mile by mile survey. Source of oil was hole in barge and name of source Barge was Boston 30. New Jersey shorelines impacted and NJDEP Gary Pearson also contacted and NJDEP Dan Potashnick arrived onsite. Cleanup being supervised by Gallagher Marine (David Barry Ph:703-932-5138). US Dept of Interior looking for update as well from Unified Command. Recoverable oil from extends from Fort Wadsworth to Elizabeth NJ and a Public Information Officer has been drafted by Boston Marine Transport (owner of Boston 30). Kens Marine will be setting up vessel decontamination areas and MSRC also arrived on-site with 3 shallow water barge systems. Amount recovered and amount spilled still being determined and amounts requested by Unified Command. Vought NY SOSOC representative as part of UC. Maximum amount spilled is 112,490-gallons of #6 fuel oil. 12:30pm-Vought-Briefing to Unified Command. Name of barge that was source of spill was Boston B30 1961 Barge which was scheduled to off-load 112,490 gallons of oil from a tank that had a 147,000-gallon capacity. Oil along Richmond Avenue from railroad bridge to Hook and lighter petroleum sheen in the Arthur Kill and Narrows. Eleven assessment teams total have been deployed in Staten Island, Newark and Bayonne. Gallagher noted that they are the QI for the site. USCG Linda Sturgis is Deputy IC and Capt. Loebel is IC. Hess Terminal boomed their own facility and numerous reports of oiled vessels have been received and an advisory

BOSTON 30 (AKA MARINER'S HARBOR) OIL SPILL (Continued)

S112810162

notice to boaters being considered. Night operations are also being planned for and Tri-State Bird Rescue had been contacted and will be deployed. NOAA Ed Levine at IC and he noted tides will be getting smaller. 12:45pm-Vought-RD Lannon requests via email to have USCT Capt Loebel call her on cell phone and Vought facilitates conversation. 1:30pm-Vought-Receives Resources at Risk document from NOAA Levine. (Document has been added to E-docs). 2:00pm-Vought-UC Briefing. Map with assessment data is being produced by GIS Unit and OSRO's are meeting to coordinate set up of staging areas. On-scene OSRO's include: Clean Harbors, MSRC, Kens Marine, Miller and Millers Launch. Deflection boom has been placed by Shooters and containment boom will be installed as well and entire island will be boomed in approximately 8 hours. Clean Harbors has brought in two shallow water barge systems and oil will go to Samantha Miller barge and then go to Clean Waters Cooperative for storage and disposal. Six vacuum trucks en-route and looking for deployment locations for them. Two staging areas are being set up (one by Shooters Island which will be called East Yard and one in Bayonne, NJ (which will be called City Park Staging Area . 13,000ft of boom on hand and another 10,000ft en-route and another 15,000ft of boom may be ordered. Each OSRO will have a supervisor and additional snare is being ordered. 2:15pm-Vought-RSE sent email that Boston 30 (the gray hulled vessel shown in the photo at the top of the pier) was lightering onto another barge breasted on the offshore side of Boston 30. At 10:15 last night, oil was discovered between the two vessels. From what we understand from the tankerman, they did an assessment, found no problems above deck, but apparently did realize that they had a problem with their #2 portside cargo compartment tank. USCG, not on scene at that point, then directed the barge operators to continue the lightering operation. that resumed from 12 midnight until 7:15 AM, when water had all but replaced the oil in the casualty compartment. Portside #2 held 112,490 gals. of # 6 oil. It is currently not clear how much of that product made it to the other vessel, but we do know that whatever was transferred took 7 hours to move out of the afflicted vessel. At that point, pumping was halted. According to witnesses, the USCG arrived on the scene at approximately 9:00 AM this morning. Portside #2 currently has a contents of approx. 32,000 gals of mostly water. Several contractors (Miller Environmental, Ken's Marine, MSRC) were contacted, and are bringing resources to contain and remove the oil. As of 1:30 PM, we have three skimmer boats, three large work boats, and approximately 5,000 ft. of boom deployed at the spill location. There are no vac trucks on scene, and the requests have been made to correct this condition. Boom has been deployed partially (eastern portion) along Shooters Island, a bird sanctuary, and more is being brought to complete the protection for that island, which is immediately across from Mays shipyard. Tri-State Bird Rescue has also been alerted to this event. The USCG has deployed SCAT teams to assess the shoreline impacts. They have also done an overflight this morning, and I forwarded a copy of the photo of the spill site from that flight to the RD. They are planning another flight this afternoon. Due to the fact that we are prevented from having more than three individuals assigned vehicles for response in routine duty, we will have to see who we can contact in the Spills Unit, and have them come into the LIC office, to retrieve their vehicles for field response. I copied the DLE Captain on the initial notice of this spill event, but we will have to track down those assets, as well, for the shoreline work. Marine Resources should also be

S112810162

contacted, but they will not have access the DEC vehicles until Monday morning. It should be stated and underlined is that even though this is what we have received as info from the USCG incident command, as well as eyewitnesses, the info above may change with updated and corrected information. 2:45pm-Vought-UC Command briefing at IC. Initial reports have been received from eleven Rapid Assessment Teams (RAT) and booming of Shooters Island is near complete. Impacted wildlife found in South Bayonne, NJ consisting of 1 to 2 birds with splotches of oil. No helio survey has been performed west of Shooters Island due to airspace restrictions from NJ. Patches of recoverable oil were found in lower New York Harbor and by Verrazanno Bridge. IC requests media platform for UC as possible public affairs media engagement scheduled for 12/16. On water recovery skimming around Boston 30 will occur all night long and 50,000 ft of boom available. Tactics meeting to be held at 8pm and spill amount estimate still being calculated and a diver survey is being considered once oil is removed from around Boston 30. An Oil Spill Claim Line at 1-800-733-6175 has been set up and air monitoring for VOC's around barge is also being set up. A permanent location for the IC is also being researched. Equipment onsite includes 6 vacuum trucks, 9 skimmers, 5 recovery barges, 73,000ft of boom. Wildlife group to survey Shooters Island and ECO's will also be included in this group. Tri-State Bird Rescue has arrived on-site. Impact area has been set up into divisions for booming as per the Area Contingency Plan (ACP). DEC requested for personnel to be part of Shoreline Cleanup and Assessment Teams (SCAT) and initial request for NYSDEC guidance on cleanup endpoints. Open Action Items also include briefing to Senator Schumer, preparation of a Site Safety Plan and document oiled vessels. 4:00pm-Vought-RD Lannon sent email to ECO Capt Lopez noting that she wanted to understand events that led up to the spill. RD Lannon also sent email to Vought requesting amount of oil spilled and possible sheening on Shooters Island. DEC John sending Situation Reports to DEC Albany. SUNDAY 12/16/12: Documents in E-docs: Documentation Policy Incident Action Plan (IAP) 12/16/12 thru 12/17/12 8:30am-Vought-Participated in multi-agency helio overflight of spill zone. In flight were Vought, Gallagher(Wiken), USCG Miller, NJDEP Pearson. Joint USCG and Gallagher effort to stick tanks on barge in effort to determine spill amount. Initial spill estimates from Boston Marine are approximately 20-gallons. During overflight, Vought noted recoverable product: immediately at Mays Shipyard, in the Kill Van Kull, near SI Ferry and by Verrazano Bridge. Boom almost entirely in place around Shooters Island. Some product noted in Lower New York Harbor. Gallagher Wiken's ensured effective placement of available resources to address these areas during flight via email and cell phone. RD Lannon sent email that Tri-State Bird Recovery is requesting DEC assistance today as they assess impacts to Shooters Island. I understand ECO's are heading out there on a boat at 11am this morning and requested Vought to coordinate ECO site visit and DEC Zahn with Tri-State(Sarah Tsegmeier Ph:302-363-5086) via the IC. 10:30am-Vought-General Command and Staff meeting at IC. RP currently conducting gauging quality check in order to determine spill amount (via determination of amount of oil in barge). VOC monitoring around site shows 0ppm on land and 7.5ppm 3' above water surface. Setup of Bayonne staging area is underway and the IC will be moved to the Marriott Hotel at Newark Airport in NJ. Numerous articles in press including one in NY Times blog. EPA Kelly Labrino also onsite. USCG Gary Messner performed some preliminary

S112810162

calculations to determine spill amount and estimates approximately 26,000-gallons lost and is working on setting up a gauging survey team to determine amount of oil in tank. DEC Rivera will be the DEC Public Information Officer and Vought spoke to IC PIO (Michael Hanson MTI Network email:mhanson@mitnetwork.com Ph:845-629-0259) and provided him email and phone number of DEC Rivera and required that all press releases be approved by DEC Rivera prior to release. Tank sounding of Boston B30 to determine amount of oil remaining will be validated by USCG. Another initial calculation showed the spill amount to be 29,102-gallons. DEC Vought received request for three DEC reps to perform SCAT surveys. RD Lannon arrived at IC and met with RSE as well as Capt Loebel to discuss agency coordination, tour spill site and effectuate response. ECO Dave Thomas sent email with photos of spill to Lt Steele who forwarded onto RD Lannon. Vought sent email to DEC Zahn and DEC Maresca that USCG Strike Team has requested two DEC staff members to perform SCAT surveys on Staten Island as part of a joint team with USCG. If we do not have Mustang Suits (which are being requires by Health and Safety Unit) they would like the sizes ASAP so that they may add it to the Resource Request. I have copied USCG James Maida above as well as Gallagher Resources Unit. You may also work out specific contact arrangements with USCG Maida above as well but I believe they are looking to start first thing tomorrow (Monday) morning. 3:00pm-Vought-Received email from DEC Zahn that DEC Stadnick will be joining multi-agency SCAT Team to perform surveys on Staten Island. 24-Hour skimming operations will take place at Mays Shipyard but not areas due to Health and Safety concerns associated with cold weather waterside work during the night time. Vought received call from NYC Parks (Alex Sumners Ph:347-924-2832) who is looking for update on cleanup at Snug Harbor and requested protective booming and noted impact at small spartina area by Van Name Street and Van Pelt off of Richmond Terrace and also noted impact at Arlington Marsh. Vought calleed Steve Z and informed him of same and also faciliated discussion between NYC Sumner and Chief of Operations (Rob Schrader) and head of Planning Unit (Jason Maddox) so that Sumners concerns could be immediately addressed. 7:00pm-Vought-RD Lannon sent email to NYCDEP Gerry Kelpin and NYCDOH Thomas Matte with respect to possible health concerns and/or precautions regarding a religious school in a converted shipyard building that is immediately adjacent to recovery operations. NYC Parks Sumners sent email that This is to update the status of the Kill Van Kull oil spill. [DEC] Steve Zahn, Susan Maresca, and Jeff Vought are copied here for continued correspondence. Shortly after 1200am (morning of Saturday 12/15/12) a fuel barge unloading #6 industrial oil discovered water supply in the lines indicating a breach in their transfer of product. The tanks full capacity is 125,000 gallons. The tank was recorded filled with 112,490 gallons of fuel. It is currently unknown as to what exact amount has been actually spilled. Currently USCG operations is still working on containment. Speaking with Ed Levine, and Frank Csulak of NOAA, the oil has gone beyond the boundaries of the original calculated trajectory. The trajectory, performed by NOAA, is based on weather, wind, current, and tides. SCAT (Shoreline Cleanup Assessment Team) teams are being assembled for deployment for tomorrow morning to re-assess the area. Currently I have observed sheen and emulsified product from Arlington marsh to the Verrazano bridge. I have informed Unified Incident Command of the areas that I have seen product and sheen, as well as the location of environmentally sensitive areas. I have been asked to report to the

staging area at 3075 Richmond Terrace at 0800 tomorrow to point out the exact locations so that the areas can be boomed and assessed for cleanup. The immediate areas of concern is Arlington Marsh (located between Holland Ave, and Western Ave, adjacent to Howland Hook and Northwest of Richmond Terrace), Shooters Island, and the marsh area located northwest of Richmond Terrace between Van Name and Van Pelt avenues. Shooters Island currently is boomed off. I am not currently aware of the amount of product that reached the shores there. The RP (responsible party) has been named as Boston Marine Transport. Unified Incident Command is being moved to the Marriot located by central baggage claim at Newark Airport in the center of the airport, identification is required. DEC should be able to provide an exact address once that information is provided to them. Meeting time tomorrow for UIC is scheduled to begin at 0800. The tides are dramatically high, and dramatically low (high marshes today were immensely flooded). Next high tide is at 2253, tomorrow sunrise is 0715, sunset is 1631. Tides for Howland Hook tomorrow: 0510 L, 1112 H, 1746L, 2149H. I observed no sheen, no product in Merrill's creek or Bridge creek today. I recommend Bridge creek, and surrounding marshes on Howland Hook and New York State properties to be boomed off as a preventative measure. Following those properties are Old Place Creek, GATX marshes, Saw Mill Creek Marsh, Prall's Island, and Neck Creek Marsh; all in line of tidal directional flow. Starting at Arlington Marsh and progressing East on Richmond Terrace (towards the Ferry), the stench of oil fumes is considerably high and can be smelled in a vehicle with the windows closed. The highest concentration of smell was observed along Richmond Terrace nearest to Shooters Island. There are residences along Richmond Terrace across from the industrial yards. Discussions occurred this evening at UIC for performing air quality sampling. The shoreline of the Kill Van Kull is predominantly rip rap rock and/or concrete walls. Environmental concerns should include power washing and heated power washing (hotsying) of any rocky areas that may contain populations of ribbed mussels (*Geukensia demissa*), Oysters, other shellfish, invertebrates, or other organisms that inhabit these areas that will be destroyed in the hotsying process. I recommend that these types of areas of concern be treated with absorbent mats and absorbent pom-poms to remove as much product as possible without removing the organisms. Areas of *Spartina alterniflora* (saltmarsh cordgrass) should be cleaned with pom-pom absorbents with application by boat to absorb product without people trampling the sensitive grasses and roots and thereby causing more damage. I have currently observed pom-pom absorbents deployed along the sea walls across from Shooter's Island. DEC John received approval for out-of-state travel to NJ to IC. MONDAY 12/17/12: Documents in E-docs: DRAFT Air Sampling and Monitoring Work Plan DRAFT Worker Exposure Assessment Plan C-Tech Summary of Air Monitoring Results ICS 230 Meeting Schedule MSDS No.6 Fuel Oil DRAFT General Shoreline Treatment Recommendations and Goals (STR) IAP 12/17/12 thru 12/18/12 12:30AM-Vought-RSE and NJDEP Pearson send email approval of IAP as SOSC in UC. 8:00AM-Vought-Unified Command Meeting. Spill estimates currently ranging from 4,000-112,490 gallons of #6 fuel oil. Difficulty in estimation of spill amount due to elmusified layer of oil in barge caused by influx of sea water through hole in barge. A cooperative effort between USCG and Boston Marine to determine spill amount resulted in determination of no definitive volume and UC will receive a synopsis and reason behind their conclusions. USCG noted that four different attempts were

BOSTON 30 (AKA MARINER'S HARBOR) OIL SPILL (Continued)

S112810162

performed to sound the tank (aka determine volume) and that up to 2 of variance in product thickness was found which converts to a 420 barrel (16,000-gallon) difference in spill amounts. USCG recommended waiting for tank to settle in hope of reduction of emulsification layer. 8:30AM-Vought-Participated in multi-agency helio air survey. No oil observed from SI Ferry south to Verrazano Bridge and no oil observed along south shore of Staten Island. During overflight, all witnessed either sediment or emulsified along South Shore of Staten Island and a survey crew was ordered to vessel to the area to sample the water directly for physical inspection. No product or sheening south of Howland Hook. Product still at Mays Shipyard, small areas around Morans Yard, south shore of Bayonne. Sheening still present as well in Kill Van Kull. Helio flight also went around entire south shore of Staten Island from Great Kills up the Arthur Kill River to Howland Hook and no oil or sheening was observed. 10:30AM-Vought-Unified Command Briefing. Operations continue to receive reports of oiled vessels and RD Lannon sent email and inquired if sensitive areas were boomed as per the Area Contingency Plan (ACP). Vought checked with Environmental Unit Leader Jason Maddox who noted that booming strategy for Boston 30 was in accordance with ACP and ACP was key document used in developing booming strategy. Air monitoring report has been received from contractor (C-Tech). Amount of oil recovered yesterday was approximately 1,000-gallons. DEC Stadnick noted in email to RD Lannon that DEC Maresca will be joining SCAT survey teams this morning. NYCDOH Thomas Matte sent email to RD that city DEP investigates outdoor air quality concerns for fuel spills as needed and if reason for health to become involved NYCDOP will notify NYCDOH and NYCDOP Kelpin cc'd on email. 12:00PM-Vought-Received DRAFT Air Sampling and Monitoring Work Plan (from C-Tech) and also received DRAFT Worker Exposure Assessment Plan also from C-Tech. Received map with Manually Logged Real Time Air Monitoring Locations from C-Tech that showed 64 monitoring locations highest VOC concentrations of 0.7ppm and highest benzene concentrations of less than .05ppm. DEC Region 2 Staff participated in M2P2 inspection of Mays Shipyard as per DEC John. 2:00PM-Vought-Received email from SGS Surveyors Daniel Corris that calculates possible spill amount as 17,724-gallons. Email contained recommendation for barge to remain static to better determine product thicknesses. RSE sent email that Boston 30 (the gray hulled vessel shown in the photo at the top of the pier) was lightering onto another barge breasted on the offshore side of Boston 30. At 10:15 last night, oil was discovered between the two vessels. From what we understand from the tankerman, they did an assessment, found no problems above deck, but apparently did realize that they had a problem with their #2 portside cargo compartment tank. USCG, not on scene at that point, then directed the barge operators to continue the lightering operation. that resumed from 12 midnight until 7:15 AM, when water had all but replaced the oil in the casualty compartment. Portside #2 held 112,490 gals. of # 6 oil. It is currently not clear how much of that product made it to the other vessel, but we do know that whatever was transferred took 7 hours to move out of the afflicted vessel. At that point, pumping was halted. According to witnesses, the USCG arrived on the scene at approximately 9:00 AM this morning. Portside #2 currently has a contents of approx. 32,000 gals of mostly water. Several contractors (Miller Environmental, Ken's Marine, MSRC) were contacted, and are bringing resources to contain and remove the oil. As of 1:30 PM, we

BOSTON 30 (AKA MARINER'S HARBOR) OIL SPILL (Continued)

S112810162

have three skimmer boats, three large work boats, and approximately 5,000 ft. of boom deployed at the spill location. There are no vac trucks on scene, and the requests have been made to correct this condition. Boom has been deployed partially (eastern portion) along Shooters Island, a bird sanctuary, and more is being brought to complete the protection for that island, which is immediately across from Mays shipyard. Tri-State Bird Rescue has also been alerted to this event. The USCG has deployed SCAT teams to assess the shoreline impacts. They have also done an overflight this morning, and I forwarded a copy of the photo of the spill site from that flight to the RD. They are planning another flight this afternoon. Due to the fact that we are prevented from having more than three individuals assigned vehicles for response in routine duty, we will have to see who we can contact in the Spills Unit, and have them come into the LIC office, to retrieve their vehicles for field response. I copied the DLE Captain on the initial notice of this spill event, but we will have to track down those assets, as well, for the shoreline work. Marine Resources should also be contacted, but they will not have access the DEC vehicles until Monday morning. It should be stated and underlined is that even though this is what we have received as info from the USCG incident command, as well as eyewitnesses, the info above may change with updated and corrected information. 4:30PM-Vought-Forwarded DRAFT Worker Exposure Assessment Plan and DRAFT Air Sampling and Monitoring Work Plan to NYSDOH Hughes and NYCDOH D'Andrea for review. 5:00PM-Vought-Meeting with RSE, DEC Vought, RSE and NJDEP Pearson to discuss difficulties in determination of amount spilled despite numerous UC request for numbers. 156,000-gallons of oil/water mix recovered. TUESDAY 12/18/12: Documents in E-docs: ICS 209 Incident Status Summary BMT Letter of Authorization Oil Transfer Checklist from SPP Plan DRAFT Response Equipment Decontamination Plan 8:00AM-Vought-SGS Surveyors onsite to continue tank sounding and determine spill amount. DEC Zahm discussing [possible cutting of impacted spartina grass at Arlington Marsh with DEC Maresca. NYC Parks Mike Feller also participating in approval of methodology for cleanup of Arlington Marsh. 10:00AM-Vought-Objectives meeting at UC. Spill amount to be less than 18,000-gallons . Vought requested that cutting of spartina grass at Arlington Marsh be added to Open Action Trackers. USCG will be participating in survey of hull of Boston 30. A Demobilization Plan is being drafted for UC approval as well as a waste Plan. NOAA will be performing additional analysis on oil samples and results will be take a few days to be received. Oil footprint is steadily being reduced and some boom is being relocated to begin barge cleaning, A Quick Reaction Taskforce (QRT) has been created to address areas of oiling. Three lightly oiled birds have been reported to date. 11:00AM-Vought-Meeting with USCG Sturgis, USCG Loebel, NJDEP Pearson, DEC Vought and James Carbin Esq who is attorney for Boston Marine Transport. UC Command expressed frustration at not receiving concurrence on amount spilled despite numerous requests. SGS Surveyors will be back onsite this morning as per Carbin. UC Command also expressed frustration at determining who was the QI for the site as UC was recently told by Gallagher that they were not the QI for the spill. USCG repeated request to Carbin to be immediately informed as to who the QI is. Carbin noted that Boston Marine Transport is a small company with a total of 12 employees, one tug boat and three barges. 12:00PM-Vought-ICS 209 shows 9.3 miles of shoreline in incident area, 8 skimmers, 70,000ft of boom, 18 vacuum trucks, 221

BOSTON 30 (AKA MARINER'S HARBOR) OIL SPILL (Continued)

S112810162

personnel, 13 hoties, 6 barges and two frac tanks. Received letter dated 12/18/12 from Boston Marine Transport Joe DiCunzolo - President) that David Barry has been designated as the direct contact for Unified Command and is authorized to act on behalf of.. BMT with respect to all questions relative to pollution response and cleanup... . Captain Tom Neumann of Meredith Management Group is designated as the direct contact person for the Unified Command... and is authorized to act oh behalf of BMT with respect all questions related to the Barge Boston No. 30. RSE requested T&A Code from DEC Finalyson for spill. 1:00PM-Vought-SGS Surveyors finished second round of tank sounding and collected oil samples to determine water content and it will take approximately three hours for analysis and water calculations to be submitted to UC by 5pm and Petromar surveyors hired to assist SGS Surveyors. 3:00PM-Vought-Science meeting with RSE and DEC Zahn, Jason Maddox, NYC Parks Feller, Tri State, NJDEP and NOAA Levine. Science meetings to be held daily at 3pm. Still recoverable product by Shooters Island outside of boom and oil analysis to be for CVOCs, VOCs, PCBs and metals as per RSE. 4:00PM-Vought-Planning Meeting. Sheen noted by IMT Terminal on Kill Van Kull and reports being received of pockets of oil mousse by Shooters Island. A landside survey of Seagate is being performed and DEC Zahn to participate in SCAT survey on 12/19. Thirteen vaccum trucks will be reduced to seven vaccum trucks and no recoverable product at Arlington Marsh as per multi-agency overflight (including NOAA Levine in lieu of DEC Vought). 6:00PM-Vought-Received another email from SGS Corris that amount of oil unaccounted for is now 22,949-gallons. Vought also received another email from PetroMar (John Converse) that estimates spill amount to be 18,972-gallons. DEC Vought and NJDEP Pearson request daily recovery numbers to be produced for UC. WEDNESDAY 12/19/12: Documents in E-docs: DRAFT STR For Arlington Marsh IAP 12/19/12 thru 12/20/12 ICS 207 Incident Organization Chart ICS 209 Incident Status Summary Copy of Lab Analytical Parameters and Pricing DRAFT STR for Shooter's Island 8:30AM-Vought-UC considering use of oil solidifier and will run test in small tub that is contained. Another press release has been issued by the Public Information Officer (PIO) (assumedly run by and approved by DEC Rivera). RD Lannon inquired to Vought about PIO drafting release to NYC Council, Borough Presidents Office and Community Boards on Staten Island. Vought spoke to Gallagher (Dave Barry) who will have PIO draft up bulleted list to be used in release so that DEC Rivera can tailor it to specific needs. ECO Fitzpatrick will take lead on obtaining sample analyticals as part of DLE investigation. USCG (Bill Grossman) also investigating nature of spill and so is NJDEP DLE (Steven Ogulin). Vought provided information and some coordination in contact between investigation wings of USCG, DEP and DEC. A final figure of spill amount has been issued that received concurrence of UC which is 16,192-gallons of fuel oil. 10:00AM-Vought-Command and General Staff Meeting at IC. Solidification agents being tested today with input and witnessing by NOAA Levine. Recovery actions dominated by flushing of oil from under piers and collection by skimmers. 13 vessels cleaned to date. Two decontamination stations are being constructed and five multi-agency teams doing SCAT assessments. Reports received of oily debris and on additional dead bird. Demobilization Plan is being drafted and oil samples are being sent for analysis and results to be received by Saturday. Test runs for solidificiation agent were unsuccessful as per NOAA Levine and another press release was sent to DEC Rivera for

S112810162

approval. 11:00AM-Vought-Meeting with USCG Sturgis, NJDEP Pearson, DEC Vought and Port Captain of Kirby Off Shore Marine (John Cappabianca Ph:646-739-4157) who requested to move barges. USCG Stugis as part of waterway compliance denied request along with support of DEP and DEC due to ongoing investigation. Vought received email from NJDEP Pearson that 12/19/12 - 1115 update Clean-up activities are progressing well and longterm planning is underway. SCAT and an overflight are underway; Based on yesterday's SCAT and overflight the boom on the Bayonne shoreline is being removed;Skimmers and other on-water assets are being released; BER determined that Boston Marine Transport did not notify the NJDEP hot-line as required Division of Criminal Justice's Environmental Crimes Unit has opened an investigation. Several issues caused DCJ to do that. (The location of the transfer is in a place where a transfer should never have occurred. No one from the RP can explain what caused the discharge and other issues, etc.); We have finally gotten a number (18,000-20,000 gallons) that Unified Command feels is reliable for the amount discharged; NJDEP NRDA staff have been on-scene and are being kept in the loop. 12:00PM-Vought-Vought received DRAFT Shoreline Treatment Recommendation (STR)C-4 Fringing Marsh (aka Arlington Marsh). DRAFT STR to DEC Zahn for review and approval and a DRAFT STR for Shooters Island will be worked on tonight for submission to DEC Zahn for review and approval. 1:30pm-Vought-Received email from DEC Zahn that I performed a boots on the ground SCAT at Arlington Marsh and Shooters Island. The following summarizes observations and collective recommendations, which were to be carried back to Command by Greg Challenger (Arlington) and Todd Glodek (Shooters). Arlington: We walked the area east of the peninsula, heading east to the marina. Oiled vegetation (stained to coated) exists in a narrow (generally less than 10') band on the waterward edge. ~ 70% of the vegetated shoreline showed this impact. In almost all of these locations we recommended the vegetation be cut, bagged and removed. A minor portion of the site was to be left alone as the clean-up would likely cause too much harm to the marsh peat. Shooters: We walked the entire south and west shorelines. Most of that shore is clear of oil. The area in the SW corner exhibited a coating on rocks and debris. Overall this coating was relatively light. The condition presented as ~30% cover in the southern leg of the corner and extended from the waterline to the upland escarpment (~25'). Along the western leg of the corner, the band was much narrower (generally less than 5'). There was also oiled debris in a small spit that formed midway along the western leg, in the lee of an abandoned barge. We recommended hand cleaning of the oiled areas and removal of oiled debris. We also recommended replacement, cleaning or removal of the boom, which is itself coated with oil. Removal is advised if full containment of loose product has been achieved in the spill zone. 3:00PM-Vought-Science Meeting including DEC Vought, DEC Zahn, Mike Feller, Dr Polaris. Lab at Alpha Woods Hole in receiving two liters of product samples by tomorrow morning for analysis and is ELAP certified. DEC requested full category A Deliverables on samples. Hand cleaning needs to be performed at Shooters Island western facing shore. NOAA noted that solidification agent was not practical . Approximately 175,940-gallons of oil water mix have been recovered to date with approximately 19,055-gallons of that being oil. Recent multi-agency overflights continue show no sheening in Verrazano Narrows, one small sheen at KVK and IMT Terminal in NJ and no sheening at Shooters

S112810162

Island. No sheening around Mays Shipyard other than that emanating from sweep that needs and will be changed. One SCAT Team still operational in NY and SCAT surveys to continue on south shore of Staten Island below Verrazano. As no more recoverable product on water (other than by piers and bulkheads) all skimmers are being deconned and staff being shifted from recovery to decontamination functions. Demobilization Plan has been submitted to USCG. Received T&A Code from DEC Humphrey. DEC Zahn sent email approval for STR for Arlington Marsh to all parties. 4:00PM-Vought-Received email analysis list for the Neat Oil sample with exception of Tier 5 VOC. Full Qa/Qc data packages to be shared electronically. 5:00PM-Vought-Conference call with Vought, Lt Fitzpatrick, ECO Desatelle, USCG Staff Judge Advocates Office, NJDEP Pearson and NJ AG's office, USCG Bill Grossman USCG Sturgis and USCG Investigative Services (Mike Antonellis Ph:617-223-8590). Discussion included possible violations and review of actions taken by all parties to date. Fitzpatrick and Desatelle to take lead on acquisition of sample analyticals, cause of spill and possible enforcement. 6:00PM-Vought-Meetings with USCG Sturgis and Mays Shipyard Owner (Mr. Adams) who requested to reopen shipyard for business. 7:00PM-Vought-Received email from Environmental Unit (Greg Challenger of Polaris Applied Sciences) that I spoke to Charlie Ellwanger, the division supervisor in Arlington Marsh and he asked to send about 15 people through the segment tomorrow. He said he will stick to the numbers we recommended for grass cutting but indicated he knew where some oiled debris may be and will send the additional folks on that mission. He wanted to know if the STR included debris removal and I told him the general cleanup plan still applies everywhere; a reminder that we need to make that clear to all division supervisors and we will make a statement in this regard up front in any future STRs. 10:00PM-Vought-DEC Vought and RSE received copy of Draft IAP for 12/20-12/21 for review. NJDEP Pearson sent in email approval. THURSDAY 12/20/12: Documents in E-docs: IAP 12/20/12 thru 12/21/12 Sequence of Events 12/14/12 thru 12/19/12 USCG Request to Accept Designation as Responsible Party Shoreline Oiling Characterization Tool-Surface Oil DRAFT SCAT Plan DRAFT Site Safety Plan 2:00PM-Vought-Received bulleted Sequence of Events from UC PIO in reponse to request from RD Lannon for release to be provided to Staten Island Community Boards, Councilmembers and Borough President's Office. Vought sent request to Jason Maddox for someone to call DEC Zahn with results of 3:00PM Science Meeting as Vought taking sick day. 7:00PM-Vought-USCG Stugis sent email to Neumann that Please ensure all members of the Unified Command (FOSC, and NY OSC, NJ OSC) receive a signed receipt of this letter no later than December 25, 2012 per instruction on the letter. For documentation and recordkeeping, request an original be provided to each of us (via express mail service) as well as a signed/scanned email. A signed/scanned email will suffice NLT December 25th. Due to the complexity of mail deliveries during the holiday season, we will extend the delivery date and accept the original signature NLT December 28th. Attached to email was letter that requested that Boston Marine Transport accepts it designation as the responsible party for the spill and provide procedures for a claimant to present a claim to Boston Marine Transport.. within five days of letter. Neumann replied via email that Yes the acknowledgement letter will be sent. USCG Sturgis sent email that she will no longer be working out of IC and she and USCG Jeff Eldridge are primary points of contact. Vought received email from Operations Obrien & Gere including

S112810162

Shoreline Oiling Characterization Tool-Surface Oil which is a spreadsheet with impact descriptions including segment ID, length, oil distribution, thickness and oiling category. 10:30PM-Vought-DEC Austin sends email for IAP approval for IAP from 12/21-12/22 conditional all operations cease IAW requirements for safety during high wind events (due to expected high winds). NJDEP sent approval as well of IAP. FRIDAY 12/21/12: Documents in E-docs: Letter Accepting Designation as RP Shoreline Categorization Spreadsheets IAP 12/21/12 thru 12/22/12 ICS 209 Incident Status Summary 12/21/12 thru 12/22/12 8:00AM-Vought-Email from NJDEP Pearson that NJDEP will be reducing staffing at IC but available via phone and Vought informed IC that same was applicable to NYSDEC as well and Vought/Austin/Zahn would remain primary points of Department contact. 9:45AM-Vought-Received email from Gallagher (Graff) who is Incident Commander that We had our operations brief this morning and obviously the weather has created a large impact on the operations. They have shut down field operations except for a skeleton crew doing demob/decon of vac trucks and boom along with a boom watch team. SCAT has been out and brought back due to weather. It looks like today is not going to be as productive as we would have liked, but the focus has to remain on safety for our responders. I will be giving you an update later with any new information. 2:00PM-Vought-Received letter from Duane Morris (Carbin) noting that BMT accepted responsibility as Responsible Party. 11:00AM-Vought-Meeting with Vought, ECO Desatelle, Lt Fitzpatrick and Queens District Attorneys Office(Timothy Koller). 1:00PM-Vought-Vought, Lt Fitzpatrick and ECO Desatelle go to IC to discuss circumstances around spill and for Vought to perform functions as SOSC. Vought spoke with DEC Zahn who approved STR for Shooters Island and Vought signed approval as SOSC at IC. IC noted one oiled dead bird found however exact cause of death to be determined. STR at Arlington Marsh has begun and Shooters Island STR to begin on 1/22/12. Over holiday weekend, activities will include recovery via passive sorbents (eg sweep and snare) and maintenance on 12/23 and 12/26. Additional oil samples being sent to NOAA facility in Louisiana for additional study and lab results from Alpha Woods hole expected to be received today. Vought approved IAP for 12/22-12/24/12. All barges have been moved from the pier except for the Boston 30 and the DL2 25. Activities for 12/22 and 12/23 will consist of cleanout of piling and stanchions at Staten Island Ferry and by Bayonne Bridge. A modified tactical pause will be held due to the holidays on 12/24 and 12/25 and shoreline cleanup to resume on 12/26. Continuous air monitoring at spill location has been discontinued. 4:00PM-Vought-After concurrence with RSE, Vought sent email to all that The Department has reviewed the Summary of Air Monitoring Results dated December 20, 2012 and agrees and approves that there is no need for 24 hour Ongoing air monitoring in the general vicinity of the site. Air monitoring should be performed IAW site Safety plan. Please consider this email as a signature on the attached Command Decision Memo. Vought cc'd NYSDOH and NYCDOH on email as well. Vought sent email to all parties that The Department is no longer staffing the U/C in person and is participating fully in all aspects of the cleanup via cell phone and email (including IAP approval). I will continue to be available 24/7 throughout the holidays as the primary Department contact but you also may contact Randy Austin if needed as always. SATURDAY 12/22/12 Documents in E-docs: Fingerprinting Data From Boston 30 Overlay Photo of Shooters Island with NY/NJ Boundary Boston 30 Sample Chromatographs Boston 30

S112810162

Transit Plan ICS 209 Incident Status Summary IAP 12/22/12 thru 12/24/12 Maximum Observed Shoreline Oiling SCAT Map 9:00AM-Vought-NJDEP Pearson approves of IAP via email and Vought receives ICS 209 from 12/21/12 thru 12/22/12 10:00AM-Vought-Received email from NJDEP Pearson that he spoke to Jason Maddux (Environmental Unit) a few minutes ago who asked him about the boom on Shooters Island. Pearson told him that NJ had no problem removing the boom on the NJ section, but he needed to check in with NY, for their part of the island, etc. RSE replied that The boom on the NY side should stay in place, and be properly secured, if the NJ side boom is removed. There will still be cleaning ops occurring at Mays shipyard, and if something strays off from that operation, we don't want it landing on the Shooters Island shoreline. Also, it is our understanding that the Shoreline Treatment Recommendation (STR) for Shooters Island has been done and completed, but if that is not the case, the boom needs to stay in for that purpose, as well. Please ensure that the boom in question is tended to and replaced when it starts to be a source of sheen. IC Environmental Unit (Maddox) sent email to IC Operations (Schrader) that I spoke with Gary Pearson, NJDEP, and Ed Levine, NOAA SSC on removal of boom on the NJ side only. Both State and Federal interest (i.e. SSC, and NJDEP) concur on removal is permitted. Both feel the boom isn't doing anything and has no purpose. If and when you feel removal of the Southern portion that resides in NY jurisdiction needs to be removed please inform me and I will contact the stakeholders to discuss this with them. 11:30AM-Vought-Received draft fingerprinting data for Boston 30 Source sample and additional data will be forwarded as it is available. 12:00PM-Vought-Received email from Incident Commander (Graff) that The boom on the NY side of Shooters Island will not be removed until the Trustee agencies have agreed and informed the EU. They seem to have a good plan to address the issue on Shooters that allows the replacement of the dirty boom on the South side while still maintaining a protections strategy until there is a strong degree of confidence by all parties that removal of the final boom can be completed. I do not expect we will be at that point until later in the week (Dec. 27th or later) when the State, NOAA, USCG, & concur. I will update you with the latest financial burn rate and the 209 numbers after the afternoon brief. I just returned from the work site and there was still some free floating product contained inside the boom under the docks that they were trying to herd into brush skimmers. Let me if you would like any other information. Attached to email was picture of Shooters Island with NY/NJ state line overimposed on photo. 1:45PM-Vought-Received email from USCG Sturgis that The Officer in Charge Marine Inspection states the Boston Barge is stable to move for further DECON. I have no concerns and recommend this be approved - with the understanding the Spill Response Organization ensures all appropriate boom/pollution mitigation strategies are in place. Request your concurrence. Vought spoke with Lt Fitzpatrick and RSE and they had no objections to moving the Boston 30 and Vought forwarded same to USCG Sturgis. IC Fiance Section (Robert Chambers) sent email to RSE and Vought looking for cost estimates for NY DEC. USCG Sturgis sent email to UC that she spoke with Graff and a draft transit/oil spill prevention plan for movement of the Boston 30 will be submitted to DEC. 2:30PM-Vought-Received email from Newfields (Ted Healey) that The attachment has draft fingerprints of the BOSTON30_SOURCE_121712_01 and the two collected field samples that arrived at the laboratory yesterday. The gas chromatograms of the two

S112810162

field samples appear to be consistent with an evaporated analog of the source oil. We will look to confirm this on the field samples using the same analyses we performed on the source sample that we delivered draft to you earlier today. All three samples are included in the power point attached including a reference crude oil. Please let us know if you have any other questions. Attached to email was powerpoint with sample chromatographs. 3:00PM-Vought-Received email from Graff that I just finished the afternoon UC briefing and everything continues to be moving forward. We will be on a regular IAP prep day schedule tomorrow to develop an IAP for the 96 hour OP period to run 0700 12-24-12 to 0700 12-28-12. Please see the attached plan proposed for the Boston 30 repair and movement. The plan was cleared by USCG OCMI, and it is my suggestion that once the vessel is patched and ready to be moved, we treat this vessel like any other vessel we have had impacted in the incident area. Hotsie teams will need to be assigned to clean the hull. The OSC can work it into the schedule, but I do not see anything happening with that vessel until after the Tactical Pause. Attached to email was USCG OCMI approved transport plan for Boston 30. Vought received email from Graff that To follow up with on the request this morning for a burn rate I received the following information briefed from Finance and attached is the 209. The daily burn rate changes drastically as the decon/demob continues to reduce resources. Total = \$5.8 Million Day = \$692,000. USCG Damon Edwards sent email approving of Boston 30 Transit Plan. SUNDAY 12/23/12: Documents In E-docs: Shoreline Oiling Characterization Tool-Surface Oil ICS 209 Incident Status Summary Tri State Bird Rescue Summary 12/15/12 thru 12/23/12 8:30AM-Vought-Received email from Gallagher (John Romans) that All, Please see the changes necessary for response which will be addressed at todays Science Meeting @ 1500 hours. Reference items as follows: Segments listed below continue to be a consistent survey of no oil observed for SCAT therefore we will be requesting no further action at todays Science Meeting which will later be followed up with the appropriate documentation: Segments A1 - A14; Segments A23 - B3; Segment E12B; Segment E-13B; Segment E-15 - E20; Segments B23 - B30; Segments C7 - C18. Attached to email was Shoreline Oiling Characterization Tool-Surface Oil. 1:00PM-Vought-RSE approved plan for movement of Boston 30 that had been approved as well by USCG OCMI. Received email from Incident Commander (Graff) that The Boston 30 dive operations have been completed and the temporary patch is installed. We have been informed that Hotsie work is not permitted at the Clean Waters facility and therefore the crews are being directed to conduct that work on the Boston 30 today. The patch will set overnight and then the vessel will be ready to be moved in the morning. We will maintain a Lamor skimmer to follow the vessel the short distance to Clean Waters and then crews will boom the vessel. According to Tom Newman, the vessel is scheduled to be down at Clean Waters for 4-5 days while they offload the cargo and complete Gas Freeing. We will remove the boom when the vessel has been offloaded and cleared to depart from Clean Waters. 3:00PM-Vought-Received ICS 209 from Gallagher (Graff). 5:00PM-Vought-Received email from Graff that Per the Critical Information Plan, I am informing you that Tri-State has captured one of the 4 oiled Canadian Geese near Ken s Marine. That bird will be transported to Delaware per the EU and although they were unable to capture the other birds, they will continue to respond if notified of other impacted wildlife. Vought forwarded email to DEC Zahn. RSE and DEC Vought received proposed IAP

BOSTON 30 (AKA MARINER'S HARBOR) OIL SPILL (Continued)

S112810162

for 12/24 thru 12/28 and Vought approved IAP for 12/24/12 after verbal concurrence via phone with RSE. MONDAY 12/24/12: Documents in E-docs: IAP 12/24/12 thru 12/28/12 Status Report for 12/24/12 ICS 209 Incident Status Summary 8:00AM-Vought-NJDEP Pearson sent email approving of IAP for 12/24 thru 12/28. 9:00AM-Vought-Received email concurrence from NYSDOH Hughes on Vought approval to cease continuous 24-hour air monitoring at site. 11:00AM-Vought-Spoke with Gallagher (Graff) and he noted that largest source of contamination currently is oiled equipment that is now acting as a secondary source of contamination and as such focus of operations beginning to shift to decontamination. Vought called and spoke to Gallagher (Dave Barry) and he noted that results from Alpha Woods hole labs for Boston 30 samples are expected next week and will be sent to USCG, NYSDEC and NJDEP. Vought forwarded fingerprinting data to Lt Fitzpatrick and ECO Desatelle. RSE sent email with NYSDEC approval of the IAP for 12/24 thru 12/28. 12:00PM-Vought-Incident Command (Graff) sent email to RSE with cc to Vought that I received the call from Jeff regarding staffing on shoreline cleanup in relation to decon. I hope he was able explain the large number of personnel assigned to decon. If you need further clarification I would gladly talk with you further. Basically, there is a large number shown to cover today which still accounted for 24hr/day decon at two sites. As you know, that piece is accounted for in the IAP, but basically works outside the response. We push hard to shrink the footprint of the incident, remove dirty equipment and boom that was involved in the initial surge and get it to decon and cleaned so we can remove it from the resources assigned to the incident. After today, the only decon left will be boom, trucks and a few smaller items. We have had two teams out at shooters doing shoreline cleanup work and laying some snare today along with other shoreline teams finishing up before taking the Tactical Pause this afternoon. They will be back at it hard on Wednesday morning. I am sending you a copy of the briefing from ops today of their plan. Since tactics are fluid throughout the days, I have asked for a written brief of the ops plan to be provided each morning. I am glad to report that the Boston 30 is no longer on site. It was patched and cleaned yesterday and moved to the Clean Waters facility and boomed a few hours ago. Again, I apologize for not catching the typo for your email address. Maybe you can forgive me as a Birthday/Christmas gift. I finally caught up on some sleep last night and I feel much better and I am going out to find a nice restaurant to spend my birthday with some members of the response that are staying over for Christmas. Attached to email was status report for 12/24. 1:00PM-Vought-Received email from Lt Fitzpatrick that the samples collected by the USCG were only for the petroleum fingerprint analysis and of the samples collected by the CG, NOAA had asked for splits of these to run their own analyses at the lab in Louisiana, but these analyses are not for hazardous waste characteristics. LT Fitzpatrick also noted that Gallagher Marine, the company hired by Boston Marine (RP) to do the clean-up, collected samples that were to be run at an approved lab for the parameters that Spills requested. Inv. Desotelle and Fitzpatrick met with Gallagher staff on Friday and we were told that they would have the lab results later that day and would e-mail the results to Inv. Desotelle. No results received to date and Fitzpatrick noted he would follow up with Gallagher. Vought also received email from Environmental Unit (Maddox) that I do know that shooter's STR began yesterday. I had demobilized from the response yesterday afternoon and have transferred the EU to John

S112810162

Roman (901) 487-5022. The boom on the South side has only been replaced with clean boom. The Boom around the NJ side of the island has been removed. For further updates I revert to John (RIC) to provide details from the end of the day yesterday and today. Vought forwarded email to RD Lannon due to previous inquiry.

2:00PM-Vought-Incident Commander (Graff) sent email that Attached is the snapshot 209 as of 1200 hours today. Please see the Special Notes regarding SCAT and wildlife. Please note that there will not be a 209 tomorrow during the Tactical Pause . If there are any items that meet the notification threshold set out by the UC, I will be emailing you directly. Boom watch and Security will be the only operations active tomorrow and they have notifications process in place in case there is a need. ICS 209 attached to email. 2:45PM-Vought-CC'd on email form USCG Sturgis to Incident Commander (Barry) that It has come to my attention that the oil analytics from the Boston 30/DBL 25 transfer have not yet been provided to the State OSCs or FOSC as requested on December 15th, again on December 17th, and several times thereafter. The QI must provide an analysis report no later than 1000 on Weds, December 26th or a signed/written reason by the QI (not the spill response organization) as to why this has not been accomplished to both the FOSC and OSCs no later than 1000 on Weds, December 26th. Thank you for your prompt attention. Received email from Environmental Unit that After a personal visit today on Xmas eve at approximately 1000 hours it is confirmed that Shooters Island has not yet been addressed for shifting boom and crews continue to work. Shooters Island still remain at a moderate level category of being oiled until further notice after Christmas . 4:00PM-Vought-CC'd onemail from Dave Barry to USCG Sturgis that We are still awaiting the results for the BOSTON 30 oil samples sent for analysis and will forward the results to NJ, NY, and USCG when received. I am not a chemist or a scientist but understand that it should not be too surprising that we are still awaiting the results, in large part due to the wide scope of testing requested (characterization, metals, PCBs, etc). I am attempting to reach the EU member who arranged for this testing and am awaiting their response for a more detailed reason on why the results are not yet completed. However, as it is late afternoon on Christmas Eve, and the EU member that I need to reach has demobilized from the Command Post; I cannot guarantee that I will be able to provide a better explanation by 1000 on 26 December. I have also attempted to contact the laboratory performing these tests and have not been able to reach the person handling this project. I have attached preliminary results received from the laboratory on 22 December for a portion of the tests. As they are not official, they should be considered in that context. These results are incomplete and as I understand it, not official results. Although, incomplete and not official, these preliminary laboratory results were provided to Ed Levine, Scientific Support Coordinator for the FOSC, when received on 22 December. It is our normal practice to have the EU obtain source samples for analysis as it is necessary for waste disposal permitting, etc., and we did so for this response. However, it is important to note that we are not aware of a request for sampling/analysis on 15 December but can confirm our discussion concerning this on 17 December. Barry sent another email to Stugis noting that I received a reply from Greg Challenger of the EU and he advised that the analysis was being performed by more than one laboratory. The metals and PCB results are expected next week. Also, NJ, NY, USCG (via the SSC), and other interested parties are on the

BOSTON 30 (AKA MARINER'S HARBOR) OIL SPILL (Continued)

S112810162

distribution list for all laboratory results. I have copied the distribution list from the mail received from Newfields laboratory on 22 December below for your reference. WEDNESDAY 12/26/12: Documents in E-docs: Operations Status Update ICS 209 Incident Status Summary Shoreline Oiling Characterization Tool-Surface Oil 7:00AM-Vought-Received email request from Graff to call him due to expected arrival of inclement weather. 8:00AM-Vought-DEC Zahn sent email to Vought that Earlier this morning Kyle Kolwaite contacted me asking for approval to remove the boom from around Shooters Island. He told me that all floating oil had been contained/cleaned up and that the Boston Marine vessel had left the site. Under those circumstances, I gave him my support to remove the boom. He was going to deliver the message to Operations. 9:00AM-Vought-Received email from Graff that As additional analyses are completed I will send them along. We should get additional results daily through the end of this week. Storms in the Midwest the end of last week stalled shipments of the product that caused two facilities to receive their aliquot Monday and even Wednesday with the holiday so this was a big issue. I will keep you and everyone else updated each day. 12:00PM-Vought-Performed site visit to IC and hotsie crews continuing cleanup of Atlantic Mooring in NJ as well as hotsie/flushing of impacted rip rap and also a piers at Mays Shipyard. Cleanup crew continuing operations on Shooters Island with oversight of Environmental Unit (Todd Goddeck). DBL2 25 barge is being cleaned at Kirby Offshore Marine and boats and barges continue to be cleaned as well. SCAT inspections are ongoing and total of 17 vessels cleaned with 15 more pending and some vacuum trucks and skimmers are being returned to OSRSO's. DEC Zahn via email approved removal of boom from Shooter's Island. Vought spoke with Graff and due to heavy winds, IC is planning temporary shut down of water side operations today and will also be moving to a week long operational period for the next IAP. 3:00PM-Vought-Received email from Graff that Attached is the 209 following our UC briefing this afternoon. You will notice that the boom totals have dropped drastically. Crews worked very hard to get all the boom off of Shooters Island after receiving approval from NY before the storm hindered operations. The number of personnel assigned to the incident still looks high since there are many people that have not been officially demobilized. The vessel decon site is now demobilizing and the equipment decon site at Millers is now on day shift only status. This allows us to cut the decon staffing in half and those assigned personnel numbers will drop quickly. Shoreline cleaning continues in full swing until weather causes adjustments. SCAT was not operational today and will not likely be deployed tomorrow. The EU is working on an agreement with the State representatives to get sign off and clear some of the areas on the map. They will also be working closely to coordinate State and Federal representation on the SCAT teams when they resume (hopefully Friday). If you were not aware, the new EU is John Romans who took over for Jason Maddox on 12-24-12. John can be reached at (901)487-5022 or mhesllc@gmail.com. Attached to email was ICS 209. Received Shoreline Oiling Characterization Tool-Surface Oil for 12/26/12. THURSDAY 12/27/12: Documents in E-docs: Science Meeting Agenda Boston 30 Sample Analyticals Shoreline Categorization Spreadsheets ICS 209 Incident Status Summary SCAT Map 1:30PM-Vought-Performed site visit to IC and spoke with Graff and decontamination of barges continues in NJ at Clean Harbors Cooperative. The last piece of Clean Harbors equipment has been

BOSTON 30 (AKA MARINER'S HARBOR) OIL SPILL (Continued)

S112810162

removed from the site and MSRC demobilized before the holiday. Last remaining boom and equipment of Miller owned equipment will be performed by tomorrow. Cleaning of Area B in Bayonne, NJ was completed. Remaining work at Staten Island includes: 1)Mays Shipyard 2)Great Lakes C2 (will be done on Sat when tugs available as operations include barge cleaning and pending access agreement); Flag Terminal D2 will be completed today including barge cleaning; Pier at D9 (pierwashing to be completed today); Staten Island Ferry Fuel Pier (scheduled for Sat at request of Staten Island Ferry due to reduced service); Shooter's Island (Crew of ten removing oily debris, cutting impacted grass as per DEC Zahn approved STR. Another Segment close out memo to be drafted for UC approval for segments that have not had any oil observed to date since spill (areas in Blue on SCAT maps). Demeo to participate as SOSC in segment sign-offs tomorrow at South Shore of Staten Island. DEC Rahman to inspect Snug Harbor as part of multi-agency sign offs on 12/31. 2:30PM-Vought-Received Science Meeting Agenda for day which included topics: Boom removal from Zone B; continuing cleanup at Mays Shipyard including flushing and hotsie of rip-rap, cleanup of shoreline and pier structures at Mays; replacing sorbent at Mays; Boston 30 has been removed and shifted to Clean Harbors and tentative decon on 12/29; hotsie Staten Island Ferry Terminal on weekends; schedule clean up at Flag Terminal. 34 cleaned vessels to date and three uncleaned vessels. Total boom decontamination is 27,400'. Vought obtained availability of Spills Staff (DEC Piper, DEC Demeo, DEC Patel and DEC Rahman as per RSE) for scheduling of Segment sign-offs with SCAT team members. 4:00PM-Vought-Received analysis for Boston 30 sample from Ted Healey including TAL Metals, PCB, Density and Viscosity data and forwarded to Lt Fitzpatrick, DEC Zahn, DEC John, RD Lannon, OGC Oliva and OGC Urda. 6:00PM-Vought-Received DRAFT Segment close out memo from Obrien and Gere (Kyle Kolwaite Ph:315-404-4203) with request for comments. 8:00PM-Vought-Received Shoreline Categorization Spreadsheets from OG Kolwaite. FRIDAY 12/28/12: Documents in E-docs: Segment Close-Out Memo IAP 12/28/12 thru 1/4/12 11:00AM-Vought-Received concurrence from DEC Zahn and RSE on Draft segment close out memo after edits by Vought and OGC Urda. 1:00PM-Vought-Received email from Gallagher (Barry) that As we are now operating under an IAP with an operational period through 0700 on 4 January and transitioning from clean-up operations to shoreline inspections for sign-off, I no longer see a need to maintain a formal Command Post. If there is consensus on this, my suggestion would be that we maintain a meeting room to be used on an as needed basis and also issue a daily status report to UC members on inspection progress and other planned activities which would also include an updated Communications list for contacting purposes. If there is consensus on this, I will draft for UC approval, a Decision Memo to demobilize the Command Post at the Marriott following the 0700 briefing on Sunday 30 December. Email concurrence for IC shutdown received from USCG Sturgis, NYSDEC Vought and NJDEP Pearson. 3:00PM-Vought-Received email from DEC Zahn that tide conditions are not favorable for DEC sign off inspection of Shooters Island by DEC Stadnick until 1/7 and they will discuss with Kolwaite. Kolwaite then sent email confirming Shooters Island sign off inspection for 1/7. Vought sent email to USCG Sturgis that Our NYSDEC Regional Remediation Engineer, Paul John, cc'd above, has noted that DER reviewed the segment close out memo which noted:- In NY, the incident area will be redefined to exclude segments E12b, E13b, E15 through E20, and C7 through C18. The remaining segments

BOSTON 30 (AKA MARINER'S HARBOR) OIL SPILL (Continued)

S112810162

within the incident area will include C1 through C6, C19, D1 through D13, E1 through E11, E12a, E13a, and E14. DER strongly recommends to the Unified command that we conduct close out inspection of segment C15 to C18 (Pralls Island) E14 (mouth of Great Kills Harbor). I understand and apologize the complications that this late request may cause to Incident Command as the IAP for the next week was approved yesterday and if approved this may require Operations Section and Planning Section to possibly meet again and coordinate additional resources. As FOSC, the Department will ultimately defer to your judgement on whether the initial multi-agency SCAT team and overflight inspections were sufficient and that are close-outs are not needed or whether there is the possibility that contamination has migrated to these areas after the initial multi-agency SCAT inspections thereby necessitating additional close-out inspections. Note that I have copied Kyle Kolwaite from Incident Command Environmental Unit who is overseeing the coordination of the close-out inspections and Segment close-out memo. SATURDAY 12/29/12: Documents in E-docs: Science Meeting Agenda 8:00AM-Vought-Received DRAFT Segment Sign-Off memo from Gallagher and request for UC approval. 8:30AM-Vought-USCG Sturgis sent email that she had the time to take a detailed look at the close out memo/proposal and impacted areas in light of the numerous overflights and SCAT and was comfortable with the proposal, but not sure if we need to inspect / close out section C15 to C18 (Pralls Island) or E14 (Great Kills Harbor area) since there was no visual indication oil in this area as it relates to the Boston barge spill. USCG Sturgis also noted that the COTP now has an official order for an adjacent water/debris survey around/near the pier since there are visual underwater obstructions in areas trafficked by commercial vessels. USCG also are prohibiting any vessels from using this next to pier next to Mayship until repaired. All oil carrying vessels are now off the pier (and won't come back) and no later than Jan 2nd the remaining two vessels (crane barge and white office barge) will be moved. After January 2nd, there will be no commercial activity on this pier until it has been fixed/found structurally sound and underwater obstruction survey complete. 11:00AM-Vought-Received Science Meeting Agenda for 12/29 and topics of meeting included: Segment close out and sign off memos; Shooters Island and Bayonne Shoreline. SUNDAY 12/30/12: Documents In E-docs: Science Meeting Agenda Operations Status Update 3:00PM-Vought-Received Science Meeting Agenda and topics of meeting include status of segment close out and sign-off memos, status and discussion of Shooters Island and Bayonne Shoreline. 4:00PM-Vought-Received email Status Report from Rob Schrader and email that Work will continue at Mays Ship yard with 86 personnel under Gallagher marine Systems supervision. Environmental Unit will coordinate with New Jersey DEP and New York DEC to conduct sign offs and We are recommending a suspension of clean-up operations for the Boston 30 for New Year s Day. With the predicted Tides working against us and the weather forecast for a chance of snow, high of 36F with a wind chill as low as 21F with winds from the WNW at 15 to 20mph, I feel that it is prudent to suspend the operations for the day due to productivity and safety. Status included: flushing/hotise rip rap/shore line and pier structures, replace sorbent and debris removal at Mays shipyard; Cleaning Boston 30 after departure from Clean Waters; Ferry Terminal hotsie was completed; 43 total vessels cleaned and 32,400ft of boom deconned. NJDEP and USCG Loebel sent email approval of proposed suspension for New Years Day. MONDAY

12/31/12: Documents In E-docs: UC Decision Memo ICP Demobilization 7:00AM-Vought-Received email from David Barry with attached UC Decision Memo ICP Demobilization to document decision to demobilize ICP at Marriott effective 12/30/12 0700hrs. 9:00AM-Vought-NJDEP Pearson sent email approval of UC Decision Memo. NOAA Levine sent email to IC with possible oil observed in Segment F near Gravesend Bay sea wall and cleanup status. Environmental Unit (EU) Kowaite sent email that SCAT was completed by boat and foot within the area unofficially defined as F on 12/20/12 and 12/23/12. This included Sea Gate and Gravesend Bay north several miles to Sunset Park. A SCAT team also surveyed Hoffman and Swinburne Islands on 12/23/12. No oil was observed at any of these areas on the shoreline. Please give me a call if you have different information. 11:00AM-Vought-Sent NYSDEC email concurrence of ICP demobilization. 12:00PM-Vought-DEC Zahn sent email to RD Lannon that NRDA damages are applicable to this spill and are being pursued by DEC Maresca. 3:30PM-Vought-Received email from Kowaite that EU Science Meeting highlights included: In New York. Sign-offs of E1, E2, E3, E4, E5, E6 EU visited May's Shipyard. Utilization of boiler/hot water flushing as alternative to hotsie and ambient flushing is being discussed under piers by Operations. This method is consistent with language under the general STR, but if there are issues or concerns please bring them to the table. WEDNESDAY 1/2/13: Documents in E-docs: Science Meeting Agenda 10:00AM-Vought-DEC Zahn sent email to Kowaite that Please advise on the timing and mtg point for tomorrow's observations of the problem conditions at Mays Shipyard and Shooters Island. Last we spoke, you were contemplating the afternoon during falling tide . 12:45PM-Vought-Teleconference with OGC Urda, James Carbin and Vought. OGC Urda sent email request to Carbin for results of any investigations and surveys related to the cause of the Boston 30 oil spill. 1:30PM-Vought-Kowaite sent email to DEC Zahn that We will plan on meeting at 2:30 tomorrow at the Staging Area within Area C (2091 Richmond Terrace, Stanton Island near Mays Shipyard). Boat(s) will be available to take us to Shooters Island. You, or whomever is going, will need to bring the appropriate PPE (survival suit, steel toes, hardhat, etc.). High tide is at 11:34 and low tide tomorrow is at 1830. So we'll be observing a falling tide near the mid-tide. Snug Harbor closed out by DEC Rahman as part of multi-agency inspection and the STR for Shooters and Arlington Marsh has been completed. 3:00PM-Vought-Received Science Meeting Agenda that included status of segment close out and sign-off memos, status and discussion of Shooters Island and Bayonne Shoreline. 4:45PM-Vought-Copied on email from DEC John that DEC Ottaway sent that Please see the below from Chris. I have talked this over with a few others, and no one noted anything in the provided analysis to suggest that it is anything other than #6 Fuel Oil and email from DEC Magee that Bill: It doesn't look like waste oil to me. The metals analysis show the zinc concentration is low (13.3 ppm) lead and arsenic are non-detect. The density is high (0.95 to 0.96), that is consistent with #6 FO. # 2 FO has a density closer to 0.90. The 8260 analysis shows a total 6,980 ppm of the target compounds. All of the positive 8260 hits are consistent with petroleum hydrocarbons, there were no positive hits for halogenated compounds or oxygenates. THURSDAY 1/3/13: 11:45AM-Vought-Kowaite sent email to DEC that We'll plan doing sign-offs of D1, D2, D3, and D4. Tim, I'll call you with further details this afternoon. 1:00PM-Vought-USCG Sturgis sent email approval of DEC proposed changes to Segment Close-Out Memo and Vought

BOSTON 30 (AKA MARINER'S HARBOR) OIL SPILL (Continued)

S112810162

also received concurrence from NJDEP Pearson and sent Close-Out Memo to Kowaite. Vought also noted via email to Kowaite that same ammendment would be applicable to Segment Sign-Off Memo as well.

FRIDAY 1/4/13: Documents in E-docs: Science Meeting Agenda

11:00AM-Vought-DEC Stadnick Sent email that pics of Shooters Island on S drive. Vought noted in email to Kowaite that Segment Close Out and Segment Sign off Memos referred to same segments and Kowaite sent email to Vought that Memo 1 - Close-Out Sign-Off - This memo redefined the incident area (not legally binding) to exclude those far out areas regardless if SCAT had been performed or not. In the case of NY, SCAT was completed at a majority of the areas and an informal survey was completed in E15-E20 per your request. In this letter, D5 through D13 are to be retained as within the incident area regardless if oil was found or not. Memo 2 - Segment Sign-Off - This memo proposes to close out areas of NOO throughout the redefined incident area . Since D5-D13 had NOO(no oil observed), we propose to sign off these areas, in addition the remaining sites in Area E.

12:00PM-Vought-Sent email to Kolwaite that As such I have spoken with my supervisor, Randall Austin and we reviewed the draft Segment Sign Off Memo dated 12/28/12 and have no objections to the Memo.

3:00PM-Vought-Received email Science Meeting Agenda and topics include status of segment close out and sign-off memos, status and discussion of Shooters Island and Bayonne Shoreline.

5:00PM-Vought-OGC Conlon sent email approval from legal side of Draft Segment Sign-Off Memo. SATURDAY 1/5/13: Documents in E-docs: Science Meeting Agenda DRAFT Segment C-19 STR DRAFT Segment C-2 STR

4:00PM-Vought-Received Science Meeting Agenda and topics included: New York Segments Remaining.(C) C2; C3 (May s Shipyard); C4-C5 (Arlington Marsh); C15-C18 (Pralls Island); C19 (Shooter s Island);(D) D1 and Shooter s Island Modified STR and C2 STR sent to RP for review. 4:30PM-Vought-Received email from Kowaite to UC that In C2, we are proposing to cut a small area of vegetation at the recommendation of Tim Demeo (NYSDEC) and Susan Maresca (NYSDEC). Shooter's Island (C17) STR has been modified per discussion with the science team (NYSDEC, NYC Parks, NOAA, RP, etc.). Please review the attached STRs for C2 and C17 and send me an e-mail confirmation if they are deemed acceptable. As always, please reach out if you have any questions or concerns. DRAFT Segment C-19 STR and DRAFT Segment C-2 STR attached to email. SUNDAY 1/6/13: Documents In E-docs: Science Meeting Agenda 9:00AM-Vought-DEC Zahn sent email approval of DRAFT Segment C-19 STR and DRAFT Segment C-2 STR.

6:00PM-Vought-Received Science Meeting Agenda from RSE and topics for New York included: C2 STR approved by NYS; C3 (May s Shipyard) Maintenance plan being prepared; C4-C5 (Arlington Marsh) Scheduled for inspection (1/7/12); C15-C18 (Pralls Island) Scheduled for inspection (1/7/12); C19 (Shooter s Island) Modified STR approved by NYS, Operations continues to work on shoreline and bulkhead structure; D1 Ready for reinspection. MONDAY 1/7/13: Documents In E-docs: Science Meeting Agenda 3:45PM-Vought-Received Email from Kolwaite that Nine segments remain (5 in NJ and 4 in NY) and the current status of each is outlined in the attached agenda. Science Meeting Agenda and topics for New York included: C2 subsection of C2 signed off, Remainder of segment to be hotsied and signed off; C3 (May s Shipyard) Maintenance plan is prepared and being reviewed internally; C19 (Shooter s Island) Modified STR approved by NYS (1/6/13), Operations continues to work on shoreline and bulkhead structure; D1 Subsection of D1 signed off, Remainder of segment was

S112810162

hotsied and ready for signed off. TUESDAY 1/8/13: Documents In E-docs: Science Meeting Agenda 9:00AM-Vought-Sent email to DEC John that Tim Demeo attended segments sign-offs for Segments D1 (East of Bayonne Bridge) and C2(Between Bayonne Bridge and May's Shipyard) on 1/7/13. Both segments have been divided into two sections as per request of Gallagher so as to narrow down focus area (C2-1, C2-1 and D1-1 and D1-2 respectively). Segments D1-1 (East of Bayonne Bridge) was cleared and Section D1-2 (rip-rap immediately east of bridge) was not cleared and Demeo required further work. Small spartina grass patch at C2-1 east of May's Shipyard was cleared in consultation with DEC Maresca and DEC Demeo requested further work on Section C2-2 (impacted rip rap also east of May's Shipyard). DEC Stadnick inspected and signed off both Arlington Marsh and Prall's Island and cleanup is ongoing at Shooters Island and is being supervised by DEC Stadnick. Cleanup continues at Mays Shipyard and is expected to continue for the next week at a minimum. A Maintenance and Monitoring Proposal of longer term cleanup at Mays Shipyard may also be submitted to Unified Command for approval as well. Possible sign-off inspections are scheduled for segments C2-2 and D1-2 tomorrow again with DEC Demeo. 4:00PM-Vought-Received Email from Kolwaite that Nine segments remain (5 in NJ and 4 in NY) and the current status of each is outlined in the attached agenda. Last daily Science Meeting will be on 1/10/13. Science Meeting Agenda and topics for New York included: C2 subsection of C2 signed off, Remainder of section to be hotsied and signed off; C3 (May s Shipyard) Maintenance plan is prepared and being reviewed internally, NYSDEC working on getting vehicles moved for access to Junkyard Cove ; C19 (Shooter s Island) Modified STR approved by NYS (1/6/13), Operations continues to work on shoreline and bulkhead structure; D1 Subsection of D1 signed off, Remainder of section was hotsied and ready for sign off (1/9/13). WEDNESDAY 1/9/13: Documents In E-docs: Science Meeting Agenda 10:00AM-Vought-Received email from Kolwaite with attached DRAFT Monitoring Plan and note that Only section C-3 (May's Shipyard) is targeted for monitoring at this time, and with FOSC and NY SOSC sign-off we can move forward with implementation. Specific monitoring plans will be written on an as needed basis. Please review and let me know if we have acceptance of the plan. Vought did not add plan to E-docs as this DRAFT subsequently re-editted after requests by DEC Demeo. 3:45PM-Vought-Received Email from Kolwaite that Eight segments remain (5 in NJ and 3 in NY) and the current status of each is outlined in the attached agenda. Science Meeting Agenda and topics for New York included: C2 subsection of C2 signed off, Remainder of section hotsied and ready for signoff; C3 (May s Shipyard) Maintenance plan is prepared and was sent for review, NYSDEC working on getting vehicles moved for access to Junkyard Cove ; C19 (Shooter s Island) Modified STR approved by NYS (1/6/13), Operations continues to work on shoreline and bulkhead structure, Sign-off to be scheduled for week of 1/21/12. Kolwaite sent email to DEC Stadnick that Shooter's Island should be ready for inspection, according to Operations, after Friday. With unfavorable tides next week, could we schedule a sign-off date of Monday January 21st? Low tide is at 11:07 so I would propose a meeting time of 10:30 at a location yet to be determined. Please let me know if you, or a representative, are available. DEC Stadnick replied that I can possibly recommend a earlier sign-off via submission of photos of the sites after clean-up. Please have Operations take photos of the entire clean-up & forward them to me for a determination of sign-off. NYC Parks Feller

noted that with respect to Shooters Island that he but would not be able to make it until Wednesday 1/23. Kolwaite sent email to DEC Stadnick that Sounds good. I'll pass along those photo's when I have them, but we'll need to have FOSC agree to sign-off based on this as well. THURSDAY 1/10/13: Documents In E-docs: Science Meeting Agenda 1:30PM-Vought-Received Email from Kolwaite that Eight segments remain (5 in NJ and 3 in NY) and the current status of each is consistent with yesterday's agenda. Last daily science meeting is today. MONDAY 1/14/13: 12:00PM-Vought-Sent email to Graff requesting IAP from 12/18 thru 12/19 and he replied with note that I just noticed the same and I do not have an electronic copy in my files of that date for some reason (probably the same reason you don t). I am tracking it down and I will revert with it as soon as I get it. WEDNESDAY 1/16/13: 10:00AM-Vought-Kolwaite sent email to all parties that Please plan on inspecting C2-3 for sign-off on January 23rd. Low tide is at 1313; I propose you meet at 1300 at the Staging Area parking lot (2901 Richmond Terrace, Staten Island). If you suspect you will need a vessel please let me know and I'll make the necessary arrangements, but I believe this can be done via foot. Please confirm your participation. DEC Demeo replied that I am unavailable on 1/23/13 to participate in this meeting/inspection. I am available on 1/24 or 1/25 which should also have a favorable low tide. Can we reschedule to one of these dates? Kolwaite replied that Thursday is unavailable, so please plan on Friday (1/25). Low tide is at 14:55 so please plan on meeting at 14:30. DEC Demeo confirmed. THURSDAY 1/17/13: Documents in E-docs: Science Meeting Agenda Photolog of Shooters Island Clean-up. 1:15PM-Vought-Received Email from Kolwaite with attached Science Meeting Agenda and topics for New York included: C2 (Staging Area) To be inspected 1/25/13; C3 (May s Shipyard), Maintenance plan was prepared, NYSDEC, RP, and USCG completed site visit on 1/14/13, Draft maintenance plan to be resubmitted for Sign-off; C19 (Shooter s Island) Photlog created and being reviewed by RP, NYC Parks to visit 1/23/13. 3:00PM-Vought-Cc'd on email from Kolwaite to DEC Stadnick with email that Please see attached photolog of Shooter's Island clean-up. I did select from those provided by Operations. Additional photos are available but they include those of the actual cleaning and other miscellaneous ones. Regardless, all are available on my FTP site (see instructions below) for you to view if you so wish . Attached to email was Photolog of Shooters Island Clean-up. NOAA Levine sent email that Photolog is Looking good and requested for pictures before the cleanup was performed. TUESDAY 1/22/13: Documents in E-docs: DRAFT C3 Monitoring Plan Revised dated 1/17 7:30AM-Vought-Reeeived DRAFT C3 Monitoring Plan Revised dated 1/17 via email from Kolwaite. Vought did not add this revision to e-docs as subsequent revision submitted at a later date. Email noted that Please see the attached section C-3 (May's Shipyard/Junk Yard Cove) monitoring plan for review. It was revised based upon a site visit completed 14 January 2013 by NYSDEC, USCG, and RP representatives. If acceptable, I'll remove draft and ask for an e-mail conformation of approval by NY SOSOC, FOSC, and the RP. 3:00PM-Vought-DEC Stadnick sent email to Vought that Marine Habitat Protection is satisfied with the clean-up work that was performed on Shooter's Island and recommends the sign-off. Site visit by DEC Patel and no current operations and sheen present that was contained by booms and slight odors due to contaminated rocks. No more active flushing or hotsieing and recovery is passive recovery as per DEC Demeo. WEDNESDAY 1/23/13: 8:45AM-Vought-DEC Zahn sent approval of DRAFT C3 Monitoring Plan

S112810162

Revised dated 1/17. THURSDAY 1/24/13: Documents In E-docs: Science Meeting Agenda 2:00PM-Vought-Received Email from Kolwaite that Six segments remain (4 in NJ and 2 in NY) with sign-offs scheduled for tomorrow and Friday. Topics for New York included: C2 (Staging Area) To be inspected for sign-off 1/25/13; C3 (May s Shipyard), Maintenance plan was prepared, Signed by USCG, Monitoring inspection scheduled for 1/25/13. FRIDAY 1/25/13: 2:30PM-Vought-After concurrence by RSE, DEC Demeo and DEC Zahn, Vought sent email approval of section C-3 (May's Shipyard/Junk Yard Cove) Monitoring Plan dated 1/17/13. 4/9/15-Vought-After inquiry by DEC Urda, Vought discussed case with DEC Demeo and RSE and this spill closed due to cleanup of impacted shores."

Remarks:

"0413 THE CALLER STATED A RUPTURE OF AN OIL CONTAINER IN A BARGE. THE SPILL AMOUNT IS UNDETERMINED. THE SPILL IS PARTIALLLY CONTAINED. THE CLEAN UP IS IN PROGRESS."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 6/24/2002 - Sangesland spoke with a consultant associated with this site who would like to close out the spill number. Apparently most of the problem here is elevated PAH's. Sangesland said a complete audit should be made of the site, including soil borings and water samples (approx 5 ft to water). If these come back reasonably clean, collect off site samples to confirm the background levels, and then the owner can try to make an argument that the problem is within background levels 8/5/2002 - Vance Mathews of Eco Sciences called back again saying he took soil samples which showed elevated PAH's on the site. What more did he need to do? Sangesland asked for soil & water samples from the site and surrounding neighborhood to prove Background . DEC also requested a Site history with Sanborn maps to show the area was swamp with a bulkhead and fill. 12/2/2003 Transferred from Sangesland to Rommel 03/30/04 Spoke to Insurance Broker and added that the investigation must also include a discussion of petroleum storage (past/present) and if there were tanks, the investigation must focus around the tank systems. Rommel Austin - 9/30/09 - Spill project assignment transferred from Albany staff(DATROMP) to Vought, for further review and action. - end 6/11/10-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin and Vought transfer to Section A. 7/16/10 - Raphael Ketani. Soil contaminated by gasoline was found below the site on 2/4/02 and a spill was called in. According to the above case notes, the soil borings showed elevated PAHs. The consultants were instructed to take samples off-site and compare them. Later, the insurance broker was told that the investigation must focus around any tanks that were present or are present. According to ACRIS, the block and lot are 1208 and 1. The owner of the site is Terrace Gate Realty, LLC. The address is 3075 Richmond Terrace, and also 3087 Richmond Terrace. The Zip is 10303. The PBS registration is #2-610156. No other registrations were found. There are two tanks.

WASTE MANAGEMENT (VILLAGE CARTING CO.) (Continued)

S106000887

Both were installed on 3/16/06. One is 1,000 gal. and has diesel and the other is 3,000 gal. and has waste oil. They are in service, above ground and in contact with an impervious surface. Adam Mohamed (718) 442-9700 is the contact. There is a closed case #9311988. It was closed on 1/13/94. A dock sank and there was a sheen. When Mr. Sullivan of DEC arrived, he did not find a spill. I tried to contact Mr. Mohamed, but could only leave a message with his secretary. 7/19/10 - Raphael Ketani. Harriet of Richmond Industrial Center (718) 442-9700 called requesting copies of any documentation that the DEC would have regarding the spill. I tried to call her back, but could only leave a message stating that the DEC didn't have any documents concerning the spill, and that the DEC is requesting that a new investigation be performed. 7/21/10 - Raphael Ketani. I contacted Harriet and spoke to her regarding any available contamination investigation reports. I gave her the investigation company name of Eco Sciences. I told her that there was soil and groundwater contamination below the site. She said that she never heard of them and wasn't sure that it was her company which had paid or ordered the investigation. She said that 3075 Richmond Terrace has been broken up into several lots with independent, unassociated companies. She said that she will look further into the matter. 11/22/10 - Raphael Ketani. I again spoke to Harriet of Richmond Industrial Center (718) 442-9700. She said that Mayship has no records of any spill. She insisted that Mayship doesn't store gasoline or oil on site and never did. Harriet went on to state that the property has been subdivided into many parcels since 2002 with many owners. I told her that there was oil or gasoline contamination back in 2002 when Eco Sciences sampled the soil. I added that if Mayship does not own the property with the contamination, then she should go back to her records from 2002 and try to figure out who owned the site then. She said that she will talk to her boss about the spill. I told her that a PBS registration still exists (#2-610156) showing two tanks in service for 3075 Richmond Terrace. She asked me to FAX the registration so that she can show it to her boss. I sent her the PBS registration, but stated before hand that these tanks were probably the source of the contamination. I told her that if the tanks are located, then she will know where to conduct the investigation. 2/18/11 - Raphael Ketani. As there has been no cooperation from Mayship Shipyard, I sent a CSL to Terrace Gate Realty, LLC (the present owners of the site) with a 30 day deadline. 3/18/11 - Raphael Ketani. As there has been no response from Terrace Gate Realty, LLC to the CSL, I sent a followup letter with a deadline of April 15, 2011. The letter requested the submission of the investigation report by the deadline. 4/15/11 - Raphael Ketani. Due to the lack of response, I sent a STIP package to Terrace Gate Realty. I set a deadline of May 13 for the receipt of the signed STIP. 5/13/11 - Raphael Ketani. Terrace Gate Realty never returned the signed STIP, nor did I received the green return card. I spoke to Louis Illiano of ACS Environmental (718) 339-1984 regarding the site. He said that he didn't remember the project. I told him that there were two above ground oil tanks on site. He said that he didn't remember the tanks. Mr. Illiano said that he will look for any records and get back to me. 5/17/11 - Raphael Ketani. I spoke to Mr. Illiano today. He said that he did a records search using Mr. Mohamed's name, and the site address and didn't find anything. So he couldn't tell me what had been found in February of 2002. Next, I tried contacting Vance Mathews of Eco Sciences (212) 895-8100 (420 Lexington Avenue, Ste 1740, NY).

However, the automated greeting at this phone number was Exponent. I left a message for Mr. Mathews to call me back. 5/19/11 - Raphael Ketani. The envelope containing the STIP that was sent to Terrace Gate on 4/15/11 was received today unopened. The post office had attached a sticker indicating Unclaimed/Unable to Forward. 5/20/11 - Raphael Ketani. I never received a call back from Mr. Mathews. As the diurnal tides have been flushing the groundwater below the site since the spill occurred on 2/4/02 (for 9 years) so it is unlikely that any product is left, and as the contamination of concern was principally the PAHs (which may be the result of historical filling as the land had been filled in years ago), and as Mr. Illiano did not locate any documentation regarding an investigation or remediation taking place at the site, and as Mr. Mathews never called me back, I have determined that there is no evidence to base a spill investigation on, nor any evidence to warrant keeping the case open. Therefore, I am closing the spill case. "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was CAMP Reassigned from DEC Sigona on August 4, 2003, as per Letter from P. David Smith, Bureau Director, Remedial Bureau B. This spill site has been consolidated under Spill No. 9008286. 12/26/07 - Haggerty - assumed management from Joe Peck 4/30/08 - Haggerty - spoke with Matt Kutcha from Kleinfelder New Jersey who is now managing the site. Contamination is fully delineated with adequate MW distribution. Contamination located along perimeter of the property (along South Ave and Forest Ave). Most likely under the sidewalk and street. Remedial alternatives being investigated although site most likely will be divested. 7/2/08 - Haggerty: spoke with Matt Kutcha from Kleinfelder. At this point, ExxonMobil intends to only monitor at this point. Exxon intends to divest. Based on the fact that Exxon has excavated the majority of the soil contamination and there is no off-site contamination or any complaints of vapors from the surrounding properties or from utilities in the street. PM agrees. 12/21/08 - Haggerty: asked Kleinfelder to provide their interpretation of the MNA field parameters and the natural biodegradation occurring on-site in the next Status Update Report. 3/16/09 - Haggerty: Sent email to Exxonmobil stating that based on the results of their MNA sampling, Biodegradation at the site is limited. 5/1/09 - Haggerty: approved Oxygenating Reagent Injection Feasibility Work Plan 12/23/09 - Haggerty: Reviewed Feasibility Report dated 11/30/09. BTEX conc were low 1,600ppb Max) prior to ORC pilot test. Results from the Feasibility test revealed further degradation from the addition of oxygen, but decrease in BTEX weren't sufficient enough to warrant full-scale injection under a RAP/ Consent Order. ExxonMobil previously performed multiple excavations which significantly reduced soil and groundwater conc. Off-site groundwater was evaluated and no impacts were detected for multiple quarters. Spill Closed"

Reported to Dept: 2003-08-01
CID: 257
Water Affected: Not reported
Spill Notifier: DEC
Last Inspection: Not reported
Recommended Penalty: False
Meets Standard: False
UST Involvement: True
Remediation Phase: 0
Date Entered In Computer: 2003-08-01
Spill Record Last Update: 2003-11-12
Spiller Name: KEVIN BOLAND
Spiller Company: CSX TRANSPORTATION
Spiller Address: 301 W BAY ST, SUITE 800
Spiller County: 001
Spiller Contact: DAVID HASSRICK
Spiller Phone: (609) 279-9140
Spiller Extention: Not reported
DEC Region: 2
DER Facility ID: 89259
DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHAO Dave Hassrick (Gannett Fleming), Research Park, 202 Wall Street, Princeton, N.J. 08540 called to DEC Sigona on August 21, 2003 to locate the spill investigator. 609-847-2635. The site is located accross the street from 281 South Street. 10/10/2003 - Spill closed: referred to Solid Hazardous Material Section."
Remarks: "Closing an illegal landfill and possibly struck a underground tank."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL 03/29/05 - Transferred from Rommel to Tibbe. 06/27/08: This spill was investigated along with 0706499, which pertains to the same tank. 9914731 pertains to a tank test failure that was ultimately determined to be a leak in a vent line. 0704699 pertains to a tank test failure that was determined to be a Stage Two line. The investigation consisted of three borings installed around the tanks and dispensers. Soil and GW samples were collected. VOC soil results were very minor to ND, but SVOC results were high for SB-1 and SB-3 at 320,200ppb and 640,700ppb, respectively. The boring logs noted that no odors or staining was encountered and the PID readings were low (4ppm) to ND. The boring logs also noted that the top 10 feet was fill material. GW was encountered at 10 feet. GW results for VOC and SVOC were very minor to ND. A supplemental investigation was performed to try to determine if the SVOC results were indicative of background contamination from the fill material. Two borings were performed 40+ feet from the area of concern. The boring logs did not note any odors or staining, and the PID readings ranged from 2ppm to ND. Two soil samples were taken from each boring at the interval that demonstrated the most likely to be contaminated based on the PID reading. Soil results from SB-4 were ND for both samples but SB-5 had 38,110 ppb SVOC at the 5-7 foot interval with a corresponding 1ppm PID reading. SB-1 had 320,200ppb at 8-10 feet and a 4ppm PID reading and SB-3 had 640,700ppb at 8-10 feet and a 1ppm PID reading. Based on the lack of physical indications of contamination, no correlation between alaytical results and PID readings, fill material encountered

from the surface to the water table, the lack of groundwater contamination, and the leak locations in non-product lines, it can be surmized that the SVOC contamination may be indicative of background fill contamination."

(347) 386-6260. He said a mechanical issue caused the spill (Crack in one suction line). Approximately 5 gallons of diesel went to the water. As per Peter a crew from Mcallister Towing did the initial clean up. They boomed the area of the spill. Miller was called to finish the clean up. They notified the Coast Guard. 01/29/14- Capt. Patrick Kinnier from McAllister Towing sent the following email: A combination of absorbent booms and oil pads were utilized to pick up sheen on water (limited area), the contaminated material was then bagged up for proper disposal. The crew of the Barbara McAllister immediately deployed their Oil Spill Response Kit at the onset of the incident. I attached the time sheets and equipment utilized for the clean-up by Millers Launch Re: NYDEC # 1310141 The tug accidentally released a minor sheen (10 Gals Approx) into the surrounding water while pumping their steering compartment after receiving a high bilge alarm. The tug had a pinhole in a bilge suction line that was piped through the fuel tank into the steering compartment. This resulted in an accidental release of fuel mixed with the water. The engineer immediately secured the pump when he saw the oil/water mixture. Tug crew along with Millers Launch completed clean up. Tug was sent to GMD Brooklyn Shipyard to clean/gas free the tank and effect repairs, replaced ballast line and couplings (new). ABS (American Bureau of Shipping) approved the repairs and tug returned to service with no further incident. Spill Closed.."

Remarks:

"clean up by miller. spill is contained."

DEC Memo: "05/05/05 - Sawyer - McAllister Towing (MT) has a permit for replacing bulkhead from NYSDEC permits. George Stadnik is the permit manager and since MT has violated some special conditions of the permit and therefore discharging to the Kill Van Kull, the permit has been suspended until the contamination is delineated, removed and end point samples that are clean sent to the Department. 5/17/05 - Austin - Did inspection of this site on 5/10/05 with George Stadnik of DNR. Met with reps from McAllister and their consultant, Roux Associates. The area behind the old bulkhead had been excavated for installing the new bulkhead tieback system, revealing a series of concrete beams formerly used for a shipyard track crane (the previous use of the property, before McAllister took it over). They discovered a pocket of petroleum contaminated soil in the southeast corner of their inlet, as they were doing the excavation. They contained and removed the floating product, but will need to excavate and properly dispose of the remaining contaminated soil. Today, I spoke with Craig Werle of Roux, and we discussed what had been done to date. The contaminated soil has been removed, and post-ex samples taken, according to Werle. He wanted to know if the hole could be filled in. After discussing this with him, I indicated that since such an action was not imperative for the bulkhead project to proceed, and that any lab results may indicate that further remediation work is required, he may wish to hold off on backfilling the excavation in that area. - end 6/21/05 - Austin - Reviewed soil sampling report dated 6/15/05, submitted by Roux Associates. Report shows satisfactory removal of pet. hot spot that led to the oil sheens. NFA letter issued this date - end"

Remarks: "Callers cell# 347-538-0897. Caller was digging for a pier replacement and noticed oily material coming from the soil seeping into the water in the basin on site. The restoration of the pier is an ongoing project not sure of clean up."

- Raphael Ketani. I reopened the case as it has been referred to the Region 2 Office of General counsel for legal action. 7/25/17 - Raphael Ketani. According to the New York Stated Corporate database, DOS Process is sent to: OURANGZEIB BHATTI 2151 FOREST AVENUE STATEN ISLAND, NEW YORK, 10303 Therefore, it appears that 2151 Oil Corp. is not related to Brothers Foreign Car Specialists (spill case #9930020). There are 2 entities at the same location. 10/10/17 - Raphael Ketani. Grace Nam, Assistant Regional Attorney, Region 2 Office of General Counsel [(718) 482-6470/grace.nam@dec.ny.gov], sent an email to Mr. Beinert requesting a conference call concerning the spills at Brother Foreign Car and 2151 Oil Corp. The Order for 2151 Oil Corp. is R2-20170509-178 and the one for Brothers is R2-20081016-491. 11/6/17 - Raphael Ketani. Ms. Nam sent an Order on Consent to Mr. Bhatti of 2151 Oil Corp. The document was sent as an email attachment. In her email she asked that Mr. Bhatti sign the Order and pay a fine of \$7,750. She added that failure to do this may result in withdrawal of the offer and further enforcement action. Ms. Nam set a deadline of 12/4/17 for the return of the signed Order and the check. I reviewed the Order and had no comments. Later, Ms. Nam received a letter from a company called GSST Inc. stating that the spill was a slow leak caused by a leaking check valve. The letter also stated that the spill fuel had been cleaned up. Nothing else was stated in the letter as it was very short and simple. The letter had been signed by Ron Yarom (718) 208-5588/gsst@gmail.com. 11/8/17 - Raphael Ketani. Ms. Nam sent an email to Mr. Bhatti (zabibhatti@yahoo.com) requesting the following: " When the spill was discovered; " How the fuel was cleaned up; " Whether soil was impacted; " There was no pan under the dispenser where the spill occurred, so we assume that the soil was affected; " The spill was never reported; " We have not received any copies of invoices for replacement parts, nor bills for the cost of the remediation; and " We have not received any pictures of the spill or cleanup. If soil was affected, then we need to see an invoice and disposal document for the contaminated soil. She added the following: I just spoke to Mr. Nalbone, who said that he d take a look at this email as well. Please provide a response as soon as possible, and we ll let you know if you need to come in to discuss additional points. 11/30/17 - Raphael Ketani. A meeting took place today to discuss the spill and what should happen next regarding its resolution. In attendance were Charles Nalbone (the consultant representing Mr. Bhatti), Grace Nam (Region 2 Assistant Regional Attorney), Brian Falvey (Region 2 PBS Inspector and Environmental Engineer I), Aaron Warner and Samantha Longo (DEC legal interns working with Ms. Nam) and myself. Mr. Nalbone [(917) 346-8976; mvisone@gemstarcorp.com] explained that the leak was caused by a break in the suction line system, not the dispenser. He added that there wasn't a dispenser pan as the system is old. Mr. Nalbone claimed that the spill was only 2 ounces and, therefore, could not pose a threat to the environment. He went on to say that a technician was working on the dispenser when the check valve leaked. The check valve was defective. I responded that the Department had no documentation to prove that the spill was small. I added that we did not know how long the spill had been taking place. I also stated that a letter we had received from GSST, Inc. claimed that the spill was a slow leak. Mr. Nalbone countered that the leak was not significant. Mr. Nalbone said that the spill and the contaminated soil had been cleaned up. I responded by saying that the Department needed documentation proving that the spill had been

BROTHERS FOREIGN CAR SPECIALISTS, INC (Continued)

S104650627

cleaned up. We needed before and after pictures of the spill, which must show clean soil. A description of the procedure Mr. Yarom of GSST, Inc. had used to clean up the spill was also necessary and must be stated in the revised letter report. We also needed a manifest for where the oil and soil was disposed of, a statement regarding the quantity of soil dug up, soil end point results (if available) and any other information that was available concerning the remediation of the spill. Mr. Nalbone stated that he will get the DEC the information. After this, the meeting ended. Later, Ms. Nam sent Mr. Nalbone an email in which she stated what types of information the Department needed in order to be able to determine whether the spill had been remediated. 1/29/18 - Raphael Ketani. Ms. Nam contacted Mr. Nalbone today. He told her that soil sampling at the spill location had taken place 12 days ago. He is waiting for the analytical results. 05/03/18: This spill case transferred from R. Ketani to J. Kolleeny. - JK 04/11/19: I received an inquiry from DEC atty Ms. Grace Nam regarding this case. I reviewed DEC Remarks and documents in DecDocs, and sent an email to Mr. Bhatti (RP), with cc's to Mr. Nalbone (consultant) and Ms. Nam of R2 OGC: Dear Mr. Bhatti: I became NYSDEC project manager for this spill case after previous case manager, Mr. Raphael Ketani, retired in 2018. According to Mr. Ketani's notes in our Spills Database, Mr. Ketani had asked your consultant, Mr. Charles Nalbone, to provide documentation that leaking equipment at this site has been repaired and that spill has been cleaned up. Apparently, Mr. Nalbone spoke with Ms. Grace Nam of our Office of General Counsel in Jan. 2018 and told Ms. Nam that soil sampling had been performed at site, and he was awaiting analytical results. I am not aware of any communication between your consultant and DEC taking place after that conversation. Please confirm your receipt of this email, and provide required documentation confirming that spill has been cleaned up, including results of soil sampling, without delay in order to avoid further enforcement by our Office of General Counsel. - JK 05/01/19: Asst Regional Atty Grace Nam and I met with Charles Nablone, consultant for 2151 Oil Corp. (Mr. Zabi Bhatti, RP). Mr. Nablone presented a brief rpt prepared by Reliant Consulting Svcs, Inc. (i.e., Chris Tomasello) with results of two soil samples collected beneath leaking diesel fuel pump at site, taken in January 2018. Soil samples results show minor VOC & SVOC detections, none exceeding Unrestricted Use Soil Cleanup Objectives. Rpt notes that samples had no detections of benzene or toluene, suggesting spill is historic in nature, having allowed time for lighter volatiles to dissipate and consistent with diesel fuel as product released. I noted that photo of spill area taken in 2017 by Brian Falvey of our PBS staff appeared to show soil wet with oil; Mr. Nablone said soil was dry but stained, at least at time when samples were taken. Ms. Nam noted that \$\$ penalty in Consent Order is for RP's unresponsiveness. Mr. Nablone explained that RP is often out of country. It was agreed that Mr. Nablone would ask Reliant Consulting Svcs to prepare a remedial plan, probably involving removal of impacted soil with a type of vacuum truck capable of removing soil, and collection of one or two end-point soil samples. Ms. Nam agreed to decrease Consent Order penalty amount in light of their cooperation. - J. Kolleeny 05/02/19: Reviewed Environmental Sampling rpt by Reliant Consulting Services, Inc. dated 4/29/19 (in DecDocs). Document consists of cover page with text by Reliant (Chris Tomasello) and York lab rpt with analytical results of two soil samples collected beneath diesel fuel pump at site on 1/18/18. Sample

S104650627

Station. they don't have any history of oil spill. as per Sunny, Hess station was Amoco in past and had oil spill and there is an active remediation going on at Hess station. Sunny Virk Gulf 2151 Forest Avenue SI, NY Ph. (718) 448-0300 (516) 304-0228 (C) found open spill case at 2121 Forest ave (previously Amoco, currently Hess station) and also at 2151 Forest Avenue (Gulf station). Hess site is under remediation and Gulf site has groundwater contamination. 2121 Forest Ave. spill #: 0412635 2151 Forest Ave. spill #: 9930020 12/4/07- DEC Piper arrived on site to meet with DEP. DEP explained that after second flushing of sewer by FDNY, vapors were undetectable. I indicated to him to have the homeowners repair their sewer traps since they are not working effectively. I inspected the two local gas stations. Piper opened mw's on Hess property and determined that if there was an spill it would be indicated by elevated levels in the mw's. There was no indication of a release at the property. I then inspected the Gulf station where I asked the attendant when the last delivery was. He stated last night just before midnight. As I walked over to the fill ports, a large fresh stain was observed around the tank field. The stain was approx 12 x 15' in diameter. A drainage stain was observed leading to a solid sewer cap. I could not open it though the PID indicated VOC's in excess of 1500 ppm in soils around this sewer cap. Piper spoke with owner of property who was just told by attendant that a spill occurred last night. I estimated the spill to be no less than 40 gallons due to the size of the stain though it could have been more if the sewer had enough drainage through the solid cap. Piper explained that this spill needed to be reported. I opened the fill ports to find grossly contaminated soils in the fill box. Piper will refer cse to Legal for not reporting spill. Referred to Legal. 3/12/08: Chanda discussed with Joe Sun (NYSDEC) regarding this new spill, because there was an old spill case still open (Spill # 9930020) for this site. 3/13/08: Joe Sun and Chanda discussed with John Urda (Legal) regarding the legal action for the new spill case. 7/20/09 - Carlson: Case reassigned to Carlson. DEC Urda has an enforcement action against the gasoline delivery company Mustang Bulk Carriers. Mustang had a release at a fill box during a delivery at midnight when the station was closed. 11/18/10 - Breen: Breen is replacing Carlson. CCU # 201005623. Commissioner's Order was issued against Mustang on 11-10-10. A heavy penalty was levied and Mustang was Ordered to submit an IWP within thirty days. John Urda is the lead. see 9930020. 11/3/11 - Carlson: Contacted DEC Urda regarding site. Mustang Bulk Carriers failed to comply with the Commissioner's Order, and the case is now with the Attorney General. We will hopefully have a court order for them to do the work. 12/2/14 - Raphael Ketani. The spill case was assigned to me today. 12/3/14 - Raphael Ketani. I found out some additional information regarding the status of the legal case. Mustang Bulk Carriers is out of business. The insurance company is claiming that Mustang's insurance had lapsed at the time of the spill. So Mustang is not covered for the spill. The Attorney General still has a legal case against Mustang. Earlier spill case #9930020 with Brothers Foreign Car Specialists, Inc. is still active, but there has not been any contact with them since 2012. I spoke to the DEC spill responder in the Spills Unit who had inspected the site back on 12/4/07, Ryan Piper. Mr. Piper stated that the spill occurred due to an overfill such that the gasoline came out the vent pipes at the building. While the case record states that the spill was no less than 40 gals, Mr. Piper told me that it could have been larger. Mr. Piper added that the surface stain from the spill

BROTHERS FOREIGN CAR SPECIALISTS, INC (Continued)

S104650627

covered much of the site. The gasoline entered two street drains at the gas station. At first, Mr. Piper said, the neighbors complained of gasoline odors, but after the fire department flushed the drains a second time, there were no complaints. Mr. Piper told me that the surface where the spill took place was concrete, but it had cracks. Mr. Piper said that some gasoline entered the cracks because his PID meter registered elevated vapors. However, Mr. Piper said that he believed the amount of gasoline that had entered the subsurface was insignificant. He added that Speedi Dri was put down soon after the spill in order to remove the surface gasoline. Aside from this, it s been 7 years since the spill took place. Mr. Piper told me that he believed much of the residual gasoline had already left the site due to evaporation, and oxidation through contact with rain, snow and air. So, there is really nothing to remediate regarding this overfill. As the gasoline spill had been flushed from the sewer system by the NYFD, Speedi Dri was used to absorb the free product on the surface and the response to clean up the spill was quick so that little if any gasoline entered the cracks in the concrete or the subsurface, I determined that there were minimal impacts to the environment. Additionally, as the environmental impacts were minimal, I also determined that there was no threat to the public from any residual product. Based upon the information in the case record, I determined that the spill had been remediated and so I closed the spill case."

certificates. Stated that an invoice for oily water removal is not sufficient. All documents must be submitted by 10/02/06. (Yau) 08/11/06: Received a call from Parvinder Virk, the owner of the property. He claimed that the water level is high in Staten Island. Told me that the water got into the tank through the top. Oily water stayed inside the tank and was never released into the soil. He didn't found out until received complaints from customers that the gas is diluted with water. The oily water was pumped out by Lorco. He stated that Crompco did a tank tightness test recently. He will contact Crompco to have the results sent to DEC. (Yau) On the same day, the tank tightness test results dated 02/21/05 by Crompco are sent to DEC. Three (3) tanks (4,000 gal) passed the tightness test. The tanks were put in on 6/1/76. No evidence of leak is found. (Yau) 08/15/06: Called owner to find out if violations from 01/200 have been fixed. Violations included: 1. tanks were not protected from corrosion 2. leak monitoring system was not installed In addition, the inspector found backfill soil contamination. Owner claimed consultant has fixed everything in late Decemeber of 2000. He will call the consultant to see if he can get some documentations to proof the violations have been fixed. (Yau) 08/22/06: Received fax from owner, Parvinder Virk regarding violations found on spill report. Sent in proof of cathodic protection (CP) test by Crompco on 08/16/06. Owner had a leak detection test done on 08/21/06 by Veeder-Root TLS System. Will send in results as soon as possible. (Yau) 8/25/06: Received letter with Tank leak test report(Veeder-root TLS 300)(Yau) 10/16/06 Reassigned from Yau to Chanda (Chanda) 01/19/07:Kartik Chanda of DEC reviewed documents regarding this spill. The Department responds as follows: -the spill case cannot be closed at this time. The soil and groundwater at this site were contaminated during the equipment failure. The Department requires Subsurface Investigation Report by March 23, 2007. 01/23/07: Chanda sent a letter to Parvinder Virk (RP), requiring that a subsurface investigation report be submitted to DEC for review and approval by 03/23/07. 3/12/07: Kartik Chanda of DEC received a letter from Amar Enterprise, Inc., regarding the site updated status. The RP submitted a copy of installation of corrosion control/ cathodic protection equipment to DEC on January 1999. 4/2/07:Kartik Chanda of DEC reviewed documents, information and test results and had the following comments: -this spill was opened when free products were found in the manholes. The Department has no other supporting documents are provided to support the spill is being properly cleaned up. The spill case cannot be closed at this time. The Department requires Subsurface Investigation Report by May 18, 2007. 5/10/07: DEC received a three-month extension request from RP to complete the subsurface investigation. 5/11/07: DEC approved two month extension and sent an approval letter to RP(Pravinder Virk). The deadline extended to July 18, 2007. 7/11/07: Chanda received an email from Tom Bosshard: EnviroTrac has been retained by Mr. Sunny Virk of Amar Enterprises to conduct a subsurface investigation at the referenced site located at 2151 Forest Avenue, Staten Island, NY. The scope of work will include the collection of soil and groundwater samples in the vicinity of the underground storage tanks utilizing a Geo-probe. Soil will be sampled continuously until ground water is encountered and screened in the field using a photo-ionization detector. Soil and groundwater samples will be submitted for laboratory analysis of VOCs (including MTBE) and SVOCs via EPA Methods 8260 and 8270, STARS Lists of compounds. A final report summarizing results of the investigation

will be prepared following receipt of the laboratory analytical data. We anticipate completing the investigation and submit a report to you in approximately six weeks. Therefore, we request a time extension until August 31, 2007 to complete the required work. 7/16/07: DEC approved six week extension to submit the subsurface investigation report. The dateline extended to August 30, 2007. 9/6/07: Chanda received a Limited Subsurface Investigation Report prepared by EnviroTrac Environmental Services dated August 27, 2007. 10/5/07: Chanda reviewed the limited subsurface investigation report and has the following comment: -the groundwater(GW) analytical results showed elevated levels of VOCs. For boring SB-1, the levels of BTEX and MTBE are 613.8 ppb and 59 ppb, respectively, and for boring SB-2, the levels of BTEX and MTBE are 1,125 ppb and 1,300 ppb respectively. The high VOC concentrations indicated that the GW had been contaminated and thus, is required to be remediated and monitored. Based on the aforementioned reasons, the Department requires Delineation of Soil and Groundwater Contamination: an investigation work plan be submitted to DEC by 10/31/07 for review and approval. 10/31/07: Chanda received an extension request from Sunny Virk (Operations Manager) dated 10/31/07. He requested a three(3)month extension to submit the investigation work plan. DEC approved one month extension. The deadline extended to November 30, 2007. 11/30/07: Chanda received an extension request from Tom Bsshard, EnviroTrac dated 11/30/07. He requested a two(2) week extension to submit the investigation work plan. The Department approved his request. The dateline extended to 12/14/07. 12/4/07:(11:55) NYSDEC, Region 2, Emergency Response Team (Mr. Kumar) informed me that the neighbor of the subject property gets gasoline smell surrounding 2151 Foster Avenue, Staten Island. There is another gas station (HESS) across the street. Mr. Kumar will investigate this information. Emergency responses team still on the site. 12/4/07: (12:45)Chanda tried to contact with Sunny Virk, (718) 390-0738, but in vain. 12:50, Chanda spoke with Gas Station Operator (Amar Enterprise) regarding this gasoline smell issue. He stated that there is no smell inside this gas station area. 12/14/07: Chanda received a letter from THEODORE W. FIRETOG, Attorney and Counselor at Law dated December 14, 2007 regarding the responsible for the cleanup of the property. The letter stated that Amar Enterprises, Inc., is not responsible for this spill; The Brothers Foreign Car (the property owner) is the responsible for the cleanup of the property. Chanda received an Additional Subsurface Investigation Work Plan prepared by EnviroTrac Environmental Services dated December 12, 2007. 12/26/07: Chanda received an email from Sunny Virk with attached current property owners information. Name: Donald Marks Brother's Foreign Cars 2151 Forest Avenue Staten Island, NY 10303 Phone: 718-448-0300 Fax No.718-448-0301 4/2/08: On 3/24/08, a meeting was held among Kartik Chanda, Joe Sun and John Urda (NYSDEC Attorney) regarding the Amar Enterprise's Attorney letter for this spill site. On 4/2/08, Chanda sent a letter and Stipulation Agreement including a Corrective Action Plan to RP at Brothers Foreign Car, Inc., 2151 Forest Avenue, Staten Island, NY. The signed STIP must be submitted to DEC by 4/24/08. 4/9/08: DEC received a letter from Law office of Thaniel J. Beinert & Associates regarding the DEC's letter dated 4/2/08. The letter stated that Brothers Foreign Car, Inc. is not responsible for this spill.(See eDocs) 4/22/08: On 4/18/08, a meeting was held among Kartik Chanda, Joe Sun and John Urda (NYSDEC Attorney) regarding the Brothers Foreign Car's Attorney letter dated April 8, 2008 for this spill site. DER staff referred this case to the Legal

BROTHERS FOREIGN CAR SPECIALISTS, INC (Continued)

S104650627

Department on 4/18/08.(Chanda) 7/13/2009 - Carlson: Case reassigned to Carlson. Brothers Foreign Car Specialists signed Stipulation Agreement, effective January 14, 2009. An Investigation Work Plan was not submitted. 8/6/09 - Carlson: Issued failure to comply letter to Adam Marks, Brothers Foreign Car. IWP due 8/20/09 or legal action will be taken. 8/10/09 - Carlson: Spoke to Jimmy Wagner. Approved extension for workplan submittal to September 10, 2009. Jim Wagner 155 Bay Ridge Avenue Brooklyn, NY 11220 718-921-6609 (fax) 718-921-6601 4/14/2010 - Carlson: Spoke to Jim Wagner (attorney) and Adam Marks, he will followup with consultant (Handex) and resubmit report. 4/15/2010 - Carlson: Reviewed work plan dated 8/21/2010 addressed to Kartik Chanda. Issued letter requiring a revision work plan in 30 days. 6/9/2010 - Carlson: Approved revised investigation work plan for installation of six on-site groundwater monitoring wells. 11/12/2010 - Breen: Received RI report from Handex dated 11/8/10. They sent two paper copies and e-mailed an electronic version for edocs. Gayle Martinko is Project Mgr. Handex proposes NFA for soil and I agree. Handex proposes MNA for dissolved compounds in G/W with annual monitoring of three wells. I think quarterly monitoring is called for initially, since 707 ppb in MW-6 is too high. A more aggressive remedy should be proposed for MW-2 and MW-6. For example treatment in MW-2 and MW-6, with monitoring via MW-7, the down gradient well. Handex results are similar to what EnviroTrac found in their investigation in August 2007. See spill 0709528, which is the release during a gasoline delivery at night when the station was closed. I spoke to John Urda about the overlap/dual investigations. He said I am free to do whatever is appropriate. Since Mustang's release is not covered by any existing investigation, they should do their own in the vicinity of the fill ports. In August 2007 EnviroTrac determined soil was OK around the tank field but g/w exceeded stds for BTEX and MTBE on the east and west sides of the tank field. How about Mustang agreeing to pay Handex for quarterly monitoring and reports for at least one year? Gayle S. Martinko. gmartinko@handexmail.com. 10/26/2011 - Carlson: Issued letter requiring submission of an off site delineation work plan by November 23, 2011. Adam Marks: plentypart@aol.com. 11/1/11 - Carlson: Spoke to Joseph Bracconier. Wells will be sampled and quarterly report submitted. IWP submittal delayed until after next quarterly sampling event. 11/28/11 - Carlson: Received letter dated 11/1/11 documenting phone conversation on 11/1/11. 3/16/2012 - Carlson: Reviewed update report/IWP dated 1/30/12. Three monitoring wells sampled on 12/13/11. low level dissolved contamination present. two monitoring wells proposed on the western edge of the property. no soil sampling proposed during well installation. sent draft letter to hassan for review - revision required for soil sampling 3/19/2012 - Carlson: Issued letter - revised workplan required by 4/19/2012, soil sampling required during wells installation. 5/22/12 - Carlson: Reviewed letter dated 3/22/12 with cost estimate and summary of soil sampling methodology. Issued approval letter for RIWP dated 1/30/12 and followup letter dated 3/22/12. IR due in 90 days. 12/2/14 - Raphael Ketani. The spill case was assigned to me today. 12/3/14 - Raphael Ketani. The site is a car service station. The block and lot are 1249 and 6. The property is owned by: Donald Marks, Brothers Foreign Cars Specialists, Inc., 2151 Forest Avenue, Staten Island, NY 10303-1741, (718) 448-0300. The first PBS record is #2-601625. The owner at the time was Amar Enterprise, Inc. They did business as a GULF Station. There were three 4000 gal. USTs. Two with gas and one with diesel.

BROTHERS FOREIGN CAR SPECIALISTS, INC (Continued)

S104650627

The tanks passed their integrity tests and were then closed in place. However, there are no closure dates in the record. The second PBS record is #2-610815. The owner is the present owner - Donald Marks at 30 Pemberton Drive, Matawan, NJ, 07747 (917) 763-1534. There is one active small waste oil AST. According to the reports in the case record, the soil analytes are mostly below the CP-51 unrestricted residential standards. However, the individual analyte groundwater results are very elevated with numbers up to the hundreds of parts per billion. A later spill case is associated with this site (#0709528). It involved an overfill spill as a result of a delivery by Mustang Bulk Carriers. The Attorney General has a legal case against Mustang. However, Mustang Bulk Carriers is out of business. The insurance company is claiming that Mustang's insurance had lapsed at the time of the spill. So Mustang is not covered for the spill. I spoke to the DEC spill responder (Ryan Piper) in the Spills Unit who had inspected the site back on 12/4/07 when the overfill had taken place. Mr. Piper stated that the spill occurred due to an overfill such that the gasoline came out the vent pipes at the building. While the case record states that the spill was no less than 40 gals, Mr. Piper told me that it could have been larger. Mr. Piper added that the surface stain from the spill covered much of the site. The gasoline entered two street drains at the gas station. At first, Mr. Piper said, the neighbors complained of gasoline odors, but after the fire department flushed the drains a second time, there were no complaints. Mr. Piper told me that the surface where the spill took place was concrete, but it had cracks. Mr. Piper said that some gasoline entered the cracks because his PID meter registered elevated vapors. However, Mr. Piper said that he believed the amount of gasoline that had entered the subsurface was insignificant. He added that Speedi Dri was put down soon after the spill in order to remove the surface gasoline. Aside from this, it's been 7 years since the spill took place. Mr. Piper told me that he believed much of the residual gasoline had already left the site due to evaporation, and oxidation through contact with rain, snow and air. So, there is really nothing to remediate regarding this overfill. 12/9/14 - Raphael Ketani. As there have been no correspondences nor any report submissions since 2012 for spill case #9930020, I sent a letter to Mr. Marks and his attorney requesting the well testing report. I gave them until December 31, 2014 to submit the Handex Remedial Investigation Report. 12/16/14 - Raphael Ketani. In response to the DEC 12/9/14 letter, Joseph Bracconier, III (718) 921-6601, the lawyer for Mr. Marks, sent me an email with the 1/30/12 Remedial Investigation Report Addendum/RIWP. Wells MW-2, MW-6 and MW-7 were sampled on 12/13/11. Wells MW-1, MW-5 and MW-7 were last sampled on 9/16/10, but were not sampled since due to the results being almost entirely non-detect. The results for MW-2 (at the southwest corner of the tank field and downgradient to the pump island) were all very low and mostly either at or below the TOGS 1.1.1 standards. MTBE was 37.9 ppb and benzene was 31.4 ppb. The results for MW-6 (about 7 feet west and downgradient to the pump island) had 10 very low to low hits with 318 ppb benzene and 1210 ppb MTBE. The results for MW-7 (about 22 feet northwest of the tank field and downgradient to the pump island) were almost entirely non-detect to below standards with 90.3 ppb benzene and 15 ppb MTBE. The report also contained plans for installing two additional wells on the west side of the property. I responded to Mr. Bracconier's email by sending an email stating that the Department was approving the report, but that the more northerly

S104650627

proposed well should be installed 5 feet further south and that the southerly proposed well should be installed midway between MW-6 and MW-1. Soil samples must be taken continuously to five feet below the water table and that all soil samples must be screened with a PID meter. The most contaminated soil sample from each well must be sent to a laboratory for analysis. If there are no contaminated samples, then the soil sample from just above the water table must be sent to the laboratory. Additionally, I stated that all of the wells should be developed one month after the additional wells are installed and samples collected one month after the development time. Later, Mr. Bracconier [(bra-con-neer) (718) 921-6601] called me up and explained that the wells had never been installed because they were waiting for Ms. Carlson to approve the Remedial Investigation Report Addendum/RIWP. He asked that the Department wait on the installation of the new wells and first let his client conduct a full round of groundwater sampling in order to see what the groundwater contaminant levels are. Mr. Bracconier added that if the results are elevated, then the additional wells would be installed. I told him that this was acceptable to the Department. With that, the conversation ended.

1/16/15 - Raphael Ketani. I reviewed the HCR (Handex Consulting and Remediation, LLC) 1/6/15 Cost Proposal for Investigation Activities. In response to the DEC letter dated 12/9/14 and the DEC electronic correspondence dated 12/16/14, HCR will re-develop the 8 wells and sample them 30 days after development. The groundwater samples will be analyzed for the STARs list of analytes via method 8260. Well development and sampling will each be one day events conducted 1 month apart. I found the proposal to be acceptable.

8/24/15 - Raphael Ketani. As groundwater data has not been forthcoming and as there has been no contact from Mr. Bracconier ((718) 921-6601/joseph.bracconier@tjblaw.com) in some time, I sent him an email requiring the submission of the data reports by 9/11/15.

9/17/15 - Raphael Ketani. Mr. Bracconier sent me an email stating that additional wells were installed and tested. The analytical results will be submitted by the end of the week (9/18/15). He will also send the latest report.

10/1/15 - Raphael Ketani. I reviewed the DRAFT Handex Consulting and Remediation, LLC (HCR) April 2015 Remedial Investigation Progress Report dated 10/1/15. The site is block and lot 1249 and 6. The site is presently a gas station and car repair shop. The location is 20 feet above mean sea level. Groundwater is from 2 feet to 5 feet below grade and flows northwest. The soils consist of silty sand from 0' to 2' to 5' bgs. This is followed by sand from 2' to 6.5' bgs. Finally, there is clay from 6.5' to 15' bgs. All of the wells were redeveloped on 1/23/15. All of the wells were sampled on 3/2/15. No tables or figures were included in the report. So I sent an email to Mr. Bracconier that the report was incomplete and that the site was not closeable. I also stated that Brothers Foreign Car Specialists had until October 9th to submit the complete final report.

10/2/15 - Raphael Ketani. Mr. Bracconier sent me the figures and analytical results tables for the report. I reviewed all of the data. Soil: sampled 6/14/12: MW-8A, 8B, 9A and 9B - benzene was non-detect for all of the samples, the hits were below the CP-51 unrestricted residential standards, the 3 exceedences were only a little above the standards. Groundwater: sampled 3/2/15: MW-1, 4, 5 and 7 = almost entirely non-detect with no to 1 to 4 very low to low hits and exceedences; MW-2 = 6 non-detects, 6 very low hits, 2 low exceedences; MW-9 = 6 very low to low hits, 8 low to moderate (double digit) exceedences; MW-6 = 1 non-detect, 8 very low to low

S104650627

hits, 4 low to moderate exceedences, 188 ppb benzene; MW-8 = 5 very low to moderate hits and exceedences, 3 high exceedences, 6 very high to extremely high exceedences (646 ppb benzene, 633 ppb ethylbenzene, 412 ppb naphthalene, 1310 ppb total xylenes). At the end of my review, I sent Mr. Bracconier an email stating that I had approved the April 2015 Remedial Investigation Progress Report. However, due to the very high analyte concentrations in the groundwater sample from MW-8 and the high benzene concentration in the sample from MW-6, additional remedial actions were needed. I set a deadline of 11/6/15 for the submission of a work plan. 12/29/15 - Raphael Ketani. I sent an email to Mr. Bracconier ((718) 921-6601 (joseph.bracconier@tjblaw.com) stating that the submission of the RAWP was overdue 11/6/15 for addressing the high groundwater contamination at MW-6 and MW-8. I wrote that the Department is very concerned that the high benzene concentrations are seriously impacting the environment. I added that if the RAWP is not submitted by January 15th, 2016, then the spill case will be referred to our Legal division for possible action and fines. 2/5/16 - Raphael Ketani. An email was sent to Mr. Bracconier stating that the RAWP had not been received by the 11/6/15 deadline. I added that the CAP for the Stipulation Agreement required that a RAP (RAWP) be submitted. Because his client had not submitted the document, he was in violation of the Stipulation Agreement. I set a new deadline of 2/29/16 for the receipt of the RAP. However, I stated that if the RAP is not received by this new deadline, then the spill case would be referred to our legal division for action. 2/26/16 - Raphael Ketani. Today, I received the Handex Consulting & Remediation Cost Proposal for Updated Groundwater Sampling Event and Remedial Action Plan dated 2/23/16 from Mr. Bracconier ((718) 921-6601 (joseph.bracconier@tjblaw.com)). The document was written by Andrew R. Drake, Principal Scientist of Handex, and was addressed to Adam Marks. It contained a proposal to conduct a round of groundwater sampling in order to determine the present concentrations of the groundwater contaminants. As Mr. Drake had stated, the new groundwater information would form the basis for writing a remedial action plan. Additionally, he stated that once the results are obtained, then a remedial approach can be put together. Mr. Drake indicated that he was thinking of injecting oxygen releasing chemicals in order to reduce the groundwater contamination. The total cost for all of the sampling and associated work (before treatment) would be \$5602.50. Mr. Drake asked Mr. Marks to sign the document if he agrees with this initial plan. I sent an email to Mr. Bracconier stating this initial plan was acceptable to the Department. However, I stated the Department required that a schedule be submitted by 3/18/16 indicating when all of the associated groundwater sampling, data processing, data review and report submission tasks would be completed. 3/16/16 - Raphael Ketani. I received the HCR Proposed Implementation Schedule for Groundwater Sampling and Preparation of the RAP dated 3/16/16. I found the schedule to be acceptable. 5/26/16 - Raphael Ketani. I sent an email to Mr. Bracconier (joseph.bracconier@tjblaw.com) requesting a progress update. 6/22/16 - Raphael Ketani. According to the Implementation Schedule, groundwater sampling was supposed to take place during April 2016. The analytical results were supposed to be received during May 2016. As I have not received any updates or data, I sent another email to Mr. Bracconier requesting the data. I c-c'd Mr. Drake (adrake@handexmail.com). 6/27/16 - Raphael Ketani. Mr. Bracconier

BROTHERS FOREIGN CAR SPECIALISTS, INC (Continued)

S104650627

sent me an email stating that his client normally doesn't receive the groundwater data until the report is finalized. However, he will reach out to Handex and try to get the analytical tables as soon as they are available. I checked the report submission date in the 3/16/16 work plan and saw that it is July 15th, 2016. 5/30/17 - Raphael Ketani. An inspection of the site was performed by Brian Falvey, Environmental Engineer I with the PBS Unit in Region 2. He found diesel fuel under a dispenser and called in a new spill (#1700244). The responsible party is 2151 Oil Corp. It is not certain whether this company is part of Brothers or a separate entity on the same property or whether both companies are owned by Mr. Marks. 7/25/17 - Raphael Ketani. I managed to speak to Mr. Drake today [(609) 336-2590, ext. 1214/adrake@handexmail.com] regarding the failure of Handex to send the April 2016 groundwater analytical results and the lack of communication by Handex concerning remedial and monitoring work at the site. Mr. Drake listened, but when asked did not know why other reports or work had not taken place at the site. I reminded him that the Department was supposed to receive the April 2016 groundwater data. He said that he will have to make a call to find out more about the data and the report. Mr. Drake added that he will get back to me by July 28th. I also told him that his client was in violation of the environmental laws due to the lack of progress at the site and that this put his client in danger of legal action and/or fines. He had no comment. Later, I sent Mr. Drake an email (with a C-C to Mr. Bracconier) stating that Brothers was in violation of Article 12 of the Navigation Law Section 173 (causing a spill) and Section 176 (failure to remove a spill). I added that if the Department doesn't receive the April 2016 groundwater report by July 28th, 2017, then the spill case will be referred to the Office of General Counsel for possible legal action and fines. 7/28/17 - Raphael Ketani. Today I received the HCR Groundwater Sampling Results and Remedial Update Letter dated 7/28/17 (Thaniel Beinert and plentypart@aol.com were C-C'd in the email to me). Sampling was conducted during April 21, 2016 from wells MW-6 and MW-8. Mr. Andrew R. Drake stated in the letter that the site has a mature and stable groundwater plume. He suggested allowing natural attenuation to remediate the remaining groundwater contamination and using Mann-Kendall Trend Analysis to confirm the plume's stability. He added that HCR recommends sampling the wells during August and November of 2017 with a trend analysis and results submitted during January 2018. The groundwater elevation varied from 11.48' to 11.99' above mean sea level. Groundwater flow was depicted as being to the northwest. MW-6 had 440 ppb of benzene and 210 ppb of MTBE, but the rest of the hits were low. MW-8 had 478 ppb of benzene 684 pb of ethylbenzene, 110 ppb of isopropylbenzene, 377 ppb of naphthalene, 117 ppb of n-propylbenzene, 338 ppb of 1,2,4-trimethylbenzene, 162 ppb of 1,3,5-trimethylbenzene and 1450 ppb of xylenes. I sent an email to Mr. Drake stating that the Department had accepted the data in the letter report simply as additional information concerning the environmental conditions of the groundwater. However, I added that the Department cannot accept using a Mann-Kendall Trend Analysis as a basis for closing the spill case. I reminded him that the groundwater was very close, if not in, the contaminated soil. In light of this, it was critical to reduce the contamination of the soil so that the groundwater can be cleaned up and the spill can be closed. Lastly, I stated that sampling groundwater during August and November was acceptable to the Department, but Brothers must submit a plan for

BROTHERS FOREIGN CAR SPECIALISTS, INC (Continued)

S104650627

addressing the contamination in some manner at these two well locations. I set a due date of 9/1/17 for the submission of the work plan. 8/10/17 - Raphael Ketani. Mr. Drake [(609) 336-2590, ext. 1214/adrake@handexmail.com] and Bill Cramer from HANDEX called me in a conference call to discuss how they should proceed regarding the further remediation of the elevated contaminant concentrations. I told them that running a Mann-Kendall Trend Analysis at this point in time is not appropriate because Brothers and HANDEX have not exhausted all of the possible means of addressing the contamination at MW-6 and MW-8. I added that the State requires that the owner attempt to remediate the spill to the extent feasible. This could mean excavation, treatment solution injection, surfactant injections and so forth. Mr. Drake stated that he believed it would be appropriate to do something like solution injection and then monitor the groundwater. I told him that would be acceptable. However, we would need a work plan describing exactly what they will do to treat the contamination. In other words, the amount of chemicals to be used, the number of injections to be performed, are they going to inject from the bottom up or just within a tight interval and so forth. I added that a map must be included showing the proposed injection locations. Lastly, I said that after 3 or 4 rounds of post injection groundwater sampling, then they can use the Mann-Kendall Trend Analysis. I remarked that whatever they decide to do, the State does not ask that work take place that would endanger people or affect utilities (MW-8 is near the sidewalk). Mr. Drake said that he understood and agreed. With that, the conversation ended. 9/1/17 - Raphael Ketani. Thaniel Beinert from TBJ Law called me today [(718) 921-6606]/tbeinert@tbjlaw.com]. He said that Mr. Bracconier was no longer with the firm and that he was taking over the project. He explained that he was in contact with Mr. Drake and his office was trying to work out a payment plan for Brothers Foreign Car Specialists as the required work was expensive. He added that Brothers was just a little dad and son operation and that business had been not so good for a long time. I told him that the only issues were the locations of MW-6 and MW-8. I added that if it was not for the high contamination at these places, the spill could be closed. The entire problem was the high groundwater benzene concentrations. Mr. Beinert said he understood. He said that he will talk again to Mr. Drake and try to come to some financial agreement so that the work can start. I told him that would be alright with the Department. I added that there was a more recent spill case numbered 1700244 where gasoline was found in a spill bucket below a dispenser - due to a leak with the dispenser. I asked Mr. Beinert to look into this spill as the Department never heard of any progress correcting it. Mr. Beinert said that he will. With that, the conversation ended. 9/11/17 - Raphael Ketani. Mr. Beinert sent me an email on 9/9/17 and stated that the company which runs the gas station, 2151 Oil Corp., has not been paying rent for the gas station. He asked that I send him the spill report for their spill (#1700244). I sent him the report. I also found out that 2151 Oil Corp. IS a separate company from Brothers and IS NOT owned by the Mr. Marks. 10/6/17 - Raphael Ketani. Mr. Beinert sent me an email on 10/5/17 stating that he had talked to representatives of 2151 Oil Corp. and they told him that the spill had been taken care of. Mr. Beinert asked me whether spill #1700244 had been closed. I responded by email today and wrote that it had not been closed as the Department had no documentation proving that the spill had been remediated. I added that the violations were

Map ID
Direction
Distance
Elevation

BROTHERS FOREIGN CAR SPECIALISTS, INC (Continued)

S104650627

still in effect against 2151 Oil Corp. and his client, Brothers.
10/10/17 - Raphael Ketani. Grace Nam, Assistant Regional Attorney, Region 2 Office of General Counsel [(718) 482-6470/grace.nam@dec.ny.gov], sent an email to Mr. Beinert requesting a conference call concerning the spills at Brother Foreign Car and 2151 Oil Corp. The Order for 2151 Oil Corp. is R2-20170509-178 and the one for Brothers is R2-20081016-491. 11/6/17 - Raphael Ketani. Ms. Nam sent an Order on Consent to Mr. Bhatti of 2151 Oil Corp. The document was sent as an email attachment. In her email she asked that Mr. Bhatti sign the Order and pay a fine of \$7,750. She added that failure to do this may result in withdrawal of the offer and further enforcement action. Ms. Nam set a deadline of 12/4/17 for the return of the signed Order and the check. I reviewed the Order and had no comments. Later, Ms. Nam received a letter from a company called GSST Inc. stating that the spill was a slow leak caused by a leaking check valve. The letter also stated that the spill fuel had been cleaned up. Nothing else was stated in the letter as it was very short and simple. The letter had been signed by Ron Yarom (718) 208-5588/gsst@gmail.com. 11/24/17 - Raphael Ketani. 6 NYCRR Part 613-1.3(bd) states that the tank owner's responsibility stops at the shear valve. So whoever sells gas is responsible for a dispenser leak. 1/29/18 - Raphael Ketani. I sent an email to Mr. Beinert [(718) 921-6606]/tbeinert@tjblaw.com and to Mr. Drake [(609) 336-2590, ext. 1214/adrake@handexmail.com] requesting documentation regarding the remediation of the high groundwater contaminant concentrations at MW-6 and MW-8. 05/03/18: This spill case transferred from R. Ketani to J. Kolleeny. - JK 05/16/19: I sent email to RP's atty, Thaniel Beinert (thaniel.beinert@tjblaw.com), cc to DEC atty Grace Nam: Dear Mr. Beinert: I am NYSDEC case manager for this spill case, taking over from former case manager Raphael Ketani. Review of my files indicates that you are contact person for this spill case, which remains open and unresolved. Your client, Brothers Foreign Car Specialists, signed attached Stipulation Agreement in Dec. 2008 (effective Jan. 14, 2009), committing to address this petroleum spill according to conditions set forth in Corrective Action Plan appended to Stipulation. Corrective Action Plan required, among other things, submission of a Remedial Action Plan proposing actions to address soil and GW contamination at site, identified during subsurface investigations. By failing to submit a Remedial Action Plan to date, your client is in violation of Stipulation Agreement and could be subject to an enforcement action. To avoid enforcement and return to compliance with Stipulation Agreement and Corrective Action Plan, Department requires that a site status rpt with up-to-date GW sampling data be submitted by June 21, 2019. Rpt should include recommendations for further actions to address site conditions and bring about spill case closure. Please feel free to contact me to discuss this issue. - JK "

Remarks: "BACKFILL SOIL WAS SATUATED WITH PETROLEUM PRODUCT. FREE PRODUCT CAN BE SEEN IN THE MANHOLES WHERE ELECTRIC PROBES WERE INSTALLED."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ZHAO 5/23/2003 - Zhao responded to scene off-hours, during #6 oil heating process, the back fill control valve was in a closed position which caused oil flowed from a 6 hose into the manifold transfer station through the 3 hose to another barge. However, the gascket was missing caused spill floating on the barge, then flow over the containment to the water surface. An estimated 500 gallons spilled to surface water. It has been contained by the shoreline area since tide flowed to shore (south) and wind blowed to southeast. Absorbend pad applied by the owner crew to contain the spill area, and a soft booms set to the east spill side by 5:30AM. Miller Environmental as the owner's clean up contractor had setting up hard booms by 6:00AM. According to USCG, tide changes direction at 6:30AM. The wind direction kept same. Zhao had inspected outer side booms on the east which had a very light sheen. Miller was notified immediately. Skimmer and vaccum pumps were applied. Spill on barge contained area was back filled to barge tank. Barge had been power washed and cleanned at 7:30AM. Tim DeMeo will follow up a site visit today afternoon."

Remarks: "transferring oil from barge to tank and spilled fuel. unk contractor contacted. "

SAMUEL WOOD
"09/12/13- Zhune responded to this spill. I met Samuel Wood and Erik Richards (Supervisor) 718-981-4600. Samuel said he was in the barge pumping oil from one tank into two more tanks, when the second tank was full, he closed the valve to pump oil into the third tank. Accidentally the valve from the second tank was not closed completely and oil started going into the third and the second tank, overfilling the second tank. Oil went into the water. I asked him approximately amount of oil spilled. He said they will be able to give that information tomorrow because it was dark. Miller Environmental surrounded the area with about 3000 ft of boom. Mike from Miller said as soon they finish installing the booms, he will send people out of the water to check how far the oil had spread. He also mentioned they are going to check Shooters Island. Mike also said they could not clean the spill tonight because it is dark but tomorrow early in the morning, 25 workers will clean the spill. The Coast Guards was on the scene. Before I left the site I was instructed by my supervisor that tomorrow Ryan Piper will be inspected the area. 9/13/13- Austin - 1000 hrs - Piper did a brief shoreline survey this morning, to the east and west of the facility, and only saw small sheens. The booming continues at the facility, to button up whatever oil is around the vessel. Ryan is on a contractor's boat with the USCG and the south shoreline of Shooters Island is clean. They spotted a 2 X 25 slick patch of partially emulsified oil down by the Azco salt facility, but not much other than sheens. They will now turn back west and survey the north shore of Shooters and the confluence of Newark Bay Arthur Kill and the KVK. I spoke with Gary Pearson of NJDEP and they are reporting sheens up along the Bayonne shoreline of the Kill Van Kull and Newark Bay, and they are dispatching responders to check that location. Ryan will report back when he gets more info about Shooters Island. While the report says 1,000 barrels (= 42,000 gals), the reports from the scene (Piper, contractors) says it looks more like 6000-8000 gals. We'll get a better picture of the quantity when we have completed the survey. 1300 hrs - Piper completed the boat survey of the Kill Van Kull, ending their survey at the confluence with the upper mouth of the Arthur Kill. No oil was found on the north shore of Shooters Island, just unrecoverable sheen patches. The KVK to the west of Shooters Island has some small patches of emulsified oil and sheen on the water, but there were no observed landings of oil on the SI shoreline east of the source (the address is 3249 Richmond Terrace, and is just to the west and south of Shooters Island on the SI shoreline). We will continue to have shore and water side surveys done, but it seems that the majority of the oil stayed within the area of the facility/barge, and the flood tide last night (low slack was about 9 PM last night, high tide was about 2:30 AM) pushed any fugitive oil towards the east, leading to oiling at several NJ side facilities. Not much has been seen on the NY shore side, outside the facility's perimeter. Miller Environmental is deploying boats/workers to retrieve these fugitive slicks along the KVK. Piper is back at the facility, and I have also dispatched another DEC Responder (Kumar Patel) to the location. I have directed Piper to get additional information about this oil, as it was apparently from their slop oil barge (Clean Waters is a TSDF, cleaning waste oil from petroleum transport vessels, and receiving waste oil from other sources). The oil is exhibiting the characteristics of a light black oil that readily emulsifies in water. It is being described as a mix of #2,

#4, and # 6 fuel oils. We have also requested DLE's presence to investigate the cause of this event, for enforcement purposes. Once we gather and compare info with the USCG, the NJDEP, and our staff, we'll develop a strategy for supervising the spill cleanup, and continue additional surveys, through this weekend. 1700 hrs: The cleanup continued through the afternoon, most of the free product on the water behind the booms at the Clean Waters facility had been removed by 4 PM, leaving only isolated pockets along the shoreline that needed removal, exclusive of what was coated on the hard surfaces. Miller Environmental was the contractor conducting the facility site cleanup and oil recovery along the KVK, while Ken's Marine was conducting the containment and cleanup activities on the NJ side of the river. We have no estimates or accumulation data for how much oil has been recovered yet. This evening into tomorrow morning, the recovery operations will be curtailed for safety reasons, and boom/sorbents watch/maintenance will be done during the night hours. Upon tomorrow's sunlight, the recovery activities will resume. Since this material is a waste oil, DER staff researched the issue of potential hazardous wastes, such as chlorinated solvents and PCBs, being in this spilled oil. The Regional Remediation Engineer consulted with DMM staff on the process and regulatory requirements for this issue, and we found that any waste oil received is sampled twice before being placed through their treatment process. The processed oil is then placed on board this stationary barge. DER Spill staff on scene examined the sampling result records of the facility, and the results supported that the oil is non-hazardous. This was concurred by DMM staff. Over the weekend, as the cleanup operation proceeds, we will have DEC Spills staff present on the scene both days, to monitor the cleanup activities, coordinate with the RP, contractors, and other agencies (US Coast Guard, NJ Dept. of Envir. Protection), and report their findings to me. I will send periodic updates or alerts if something happens of significance. - end 9/16/13 - Austin - 1100 hrs update: Cleanup operations continued through the weekend during daylight hours, at both the Clean Waters Facility and the several shoreline locations impacted in New Jersey (no shoreline impacts of significance were observed along the Staten Island and Shooters Island shorelines in NY, other than at the Clean Waters facility). All of the free product has been captured from the waters adjoining the Clean Water facility, and the weekend was spent swapping out dirty sorbent sweeps for clean ones, to pick up the recoverable sheens emanating from the shoreline and marine structures in the inlet that comprises Clean Waters' operation. If you open the first attachment you'll see a diagonal shoreline based view of the vessel in question - the Casablanca , permanently stationed tank barge that had the spill event. The larger vessel behind it, also permanently moored, is Clean Water's base of operations - their office and hold tank for the unprocessed waste oil. The oil itself is extremely light, weathered oil, a mix of #s 2-4-6 oils, emulsified with water. This emulsified oil gives off a septic odor, but said odor is localized to the immediate vicinity of the sheens on the water. It is these qualities that have made the oil fairly easy to capture, and it does not seem to be adhering well to the rip-rapped shoreline under the piers and relieving platforms throughout the facility's inlet. The trajectory of the oil outside of the facility the night the spill occurred was a slick traveling east, through the strait between the south shore of Shooters Island and Staten Island (without landings on either), then further east until at least as far

as the Hess Facility in Bayonne (#337 on the attached KVK facility map), then the tide turned, and the slick headed back northwest, impacting the Hess facility, the Standard Tank/Ken's Marine facility (# 352 on the attached map) and then finally going north into Newark Bay, where it hit two private marinas on the Bayonne shoreline. Also impacted was the shoreline park at the point in Bayonne where the KVK meets Newark Bay. All have contractors working those locations, supervised by NJDEP personnel. As of Saturday morning, the amount of oil/water emulsion recovered from the cleanup operation was approximately 12,000 gals. The RP's contractor estimates that approximately 75% of that volume is oil, so that would indicate that 9,000 gals of oil have been recovered. As always, the amount of oil in an emulsion from this type of recovery effort is always suspect and prone to miscalculations and guestimates, but the spill's impact has been defined, and most of the impact appears to be localized to the facility's inlet. Saturday, the RSE and a DEC Spill Responder (Piper) supervised the cleanup operations at the Clean Waters facility. Sunday, a Spill Responder (Patel) oversaw the continuation of the cleanup operation. Today (Monday, 9/16/13), a Spill Responder will continue supervision of the spill, and do a boat shoreline tour this afternoon with the USCG along the SI/Shooters Island shorelines to assure there are no lingering pockets of petroleum contamination.-end DEC Piper performed inspection after directing contractor to replace all sweep and monitor for staining. After several days of changing a line out here and there, I accepted their request to pull all sweep. Based on work to date, no further action is granted. Case to be referred to Legal. Spill closed."

Remarks: "Transferring oil between tanks on barge. Oil ended up coming out of the top of a valve on the tank. Valve may have possibly gotten stuck. Rough estimate was 1,000 barrels. Oil was spread out due to the rain." Not reported

Environmental Interest/Information System

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large
databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource
Conservation and Recovery Act (RCRA) program through the tracking of
events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
program staff to track the notification, permit, compliance, and
corrective action activities required under RCRA.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was ROMMEL ARAKHAN 12/18/02 TTF LETTER SENT ON 12/18/02 4/12/04-Vought-Spill transferred from Zhao to Rommel as per Rommel. 10/14/04 This site is reassigned to Rashid Ahmed as per advice of Alex. The spill being on a NYCDDC Consent Order site, it is transferred to Il. 9/18/09 - Austin - I spoke with Wendy Shen of Roux Associates (631-484-1333) who called to find out who the case manager was for this spill. Rashid ahmed, currently assigned to this spill, no longer works for DER. She is working for NYCDDC, and needed to address this spll report, a tank test failure. She indicated that the tanks were removed, and soil samples were taken for closure. I told her to send the report to me, and I would assign a staff member to review the matter for closure. - end 9/21/09 - Austin - Received a tank closure report and a request to close this spill report from Brain Morrissey of Roux Associates, on behalf of NYCDDC. Spill reassigned from Rashid Ahmed in Albany to Ryan Piper, for review of submission. - end 11/2/09- DECPiper- I reviewed closure report. Tanks were removed and soils disposed of. Tanks were in concrete vault and a third exists so vault was not removed. Based on work to date, this spill is closed. See e-docs if warranted."
Remarks: "TWO TANKS FAILED THE TEST ONE WAS GASOLINE AND THE OTHER WAS KEROSENE BOTH WERE 1080 GALLONS IN SIZE. "

Updated By: JHOCONNE

Site Description: Location: The 107 acre site is located at 3418 Richmond Terrace in Staten Island, NY in an urban area. Site Features: This former industrial site has been reclaimed by wildlife, with ten ponds and a diversity of wetland and upland habitats. A 6.25-acre area was cleared in preparation for recreational redevelopment. This area is now a vacant field. Most of the remaining 101 acres is currently covered with vegetation or ponds. Structural remnants, including building foundations, floor slabs, traveling crane walls, and concrete support pillars from the former steel manufacturing operations remain in the north-northwestern and central portions of the Site. These remnants include the foundational remains of the Boiler Building, Rolling Mill, Blooming Mill, Shear Building, and a large traveling crane wall which is located just west of the Coal Tar area in the north-northeastern portion of the Site; and the Machine Shop, Blacksmith Shop, Turning Mill, Dynamos and Engines building, and the Sherardizing Building located in the central portion of the Site. The remainder of the Site has reverted back to a natural state that includes indigenous plants, ponds and freshwater wetlands. Old Place Creek enters the eastern portion of the Site from a culvert beneath Holland Avenue. During construction of the adjacent Howland Hook Marine Terminal (now New York Container Terminal) in 1970's, portions of the site were extensively mined for fill, creating several borrow pits. These borrow pits were eventually filled with groundwater to form ponds. In 1983, the US Army Corps of Engineers and the NYSDEC conducted a survey of the site and designated the ponds as Freshwater Wetlands. Current Zoning/Use(s): The site is zoned as parkland, and is surrounded by industrial, commercial and residential uses. Historical Use(s): The site was occupied by the former Milliken Brothers Structural Iron Works and Rolling Mill from approximately 1903 to 1917, and by the Downey Shipbuilding Yard from 1917 to approximately 1931. Industrial operations during this period included manufacturing steel for constructing buildings and later for ship building. Heat for steel manufacturing was generated from gas which was produced by coal gasification. Waste byproducts from coal gasification included coal slag and coal tar which were dumped at and below the ground surface on the northwest portion of the Park, where the coal gasification plant was located. From 1931 until 1974, the site was owned by American Export Industries, Inc. (AEI), which used the site primarily as a shipyard. In 1974, the City of New York purchased the site from AEI for the purpose of expanding the adjacent Howland Hook Marine Terminal. In 1997, the City declared the property "Parkland" and assigned it the name Mariners Marsh Park and transferred its management to the New York City Department of Parks and Recreation ("DPR"). DPR built two baseball fields in the northeast section of the site and several nature/hiking trails were created that traverse it. In August 2004, the City received an EPA Brownfields Assessment Grant and has conducted Phase I Environmental Assessments and a Phase II Environmental Investigations on the site. In June 2005, EPA's Program Support Branch requested that EPA's Removal Action Branch (RAB) evaluate an area of concern within the Mariners Marsh Park for a potential removal action for coal tar related to historical industrial operations on the site. In September 2011, following additional investigation, the Request for Approval and Funding for a Removal Action was approved by EPA's Regional Administrator. The subsequent Removal Action was completed

S113916778

in April 2012 with the removal of 77,995 gallons of BTEX contaminated groundwater and the excavation and removal of 5,900 tons of MGP contaminated soil. The RAR was published in October 2012. The park is presently closed to the public. Site Geology and Hydrogeology: According to data included in the previous environmental reports, soils consist of fine to coarse grained sand, silt and fill material consisting of ash and cinders. The historic fill material is approximately 2 to 5 feet thick and mainly consists of sand with gravel, brick, concrete, ash, and cinder fill. Residual fill material from on-site operations is present at several of the former steel manufacturing building locations including discolored sands and a lack of vegetation at former Sherardizing building; brick, concrete and ash within the foundation of the former Dynamo building; and, ash cinder fill above a concrete slab at the former Rolling Mill. Depth to groundwater ranges from at grade (in wetland areas) to 8 feet below grade.

Env Problem: Nature and Extent of Contamination: Soil - Volatile organic compounds (VOCs) were detected in 71 of the soil samples collected from the Coal Tar area above one (1) or more of the applicable Soil Cleanup Objectives (SCOs). Semi-volatile organic compounds (SVOCs) were detected in 73 soil samples collected above one (1) or more of the applicable SCOs. Metals concentrations were detected in all 144 soil/sediment samples above one (1) or more of the applicable SCOs. PCB concentrations were detected in four (4) of the samples above the applicable SCOs. Cyanide concentrations were detected in 52 of the soil samples above applicable SCOs. Groundwater - VOCs were detected in three (3) of the 15 groundwater samples at concentrations above the applicable standards. SVOCs were detected in three (3) of the 15 groundwater samples above the applicable standards. Total metals were detected in 14 of the 15 groundwater samples above applicable standards. Dissolved metals concentrations were detected in 13 of the 15 groundwater samples at concentrations above the applicable standards. Cyanide was detected above the applicable standards in both samples and in the duplicate sample. Coal tar was present at or below the groundwater table in several borings in and around the Coal Tar area. Significant Threat: Analytical data from samples collected at the site indicated that hazardous substances, mainly PAHs and arsenic are present in the surface and subsurface soils at such elevated concentrations that NYSDOH and ATSDR concluded in a September 2006 Health Consultation that this area is a public health hazard. EPA's removal action is expected to address the immediate human health exposure to mitigate the health hazard.

Health Problem: People who enter the site could contact contaminants in the soil by walking on the site, digging or otherwise disturbing the soil. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by the site. Additional investigation is needed to evaluate potential to come in contact with impacted soil and groundwater at the site.

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 1474

- . Waste code: U238
- . Waste name: CARBAMIC ACID, ETHYL ESTER (OR) ETHYL CARBAMATE (URETHANE)
- . Waste code: U239
- . Waste name: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 1474

- Waste code: D022
- Waste name: CHLOROFORM
- Amount (Lbs): 1379

- Waste code: D038
- Waste name: PYRIDINE
- Amount (Lbs): 1379

- Waste code: F001
- Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Amount (Lbs): 1379

- Waste code: F002
- Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE,

Updated By: SXDEWES

Site Description: The Port Authority of New York and New Jersey (Port Authority) is the current owner of the Howland Hook Marine Terminal - Port Ivory Facility located at 40 Western Avenue, in northwestern Staten Island, Richmond County, NY. This 124-acre property is a former manufacturing facility for Proctor and Gamble (P&G) who operated from the early 1900's until 1991. The site contained numerous buildings used for the manufacture of consumer products including soap, detergent and foods. The Port Authority purchased the site from P&G in 2000. The Port Authority's planned use for this site includes an intermodal facility and container terminal for loading and unloading shipping cargo. The Port Authority entered the voluntary cleanup program for three areas within the Port Ivory facility, designated as sites V00615, V00674 and V00675 (refer to these site numbers for specific information on these sites). The Voluntary Cleanup agreement was signed on July 13, 2004. A fourth parcel (38.86 acres) north of, and contiguous with, the above Sites, was appended to Site 3 through a VCA amendment dated January 4, 2007. Site # V00615 consists of 13.87 acres (of the overall 124 acre property) and is referred to as Port Ivory Site 1. The NYSDEC has reviewed and issued comments (12/15/04) on the September 2004 Site Investigation/Remedial Action Work Plan. The Port Authority was asked to separate the SI and the RA work plans. A revised Draft Site Investigation work plan for Sites 1 and 2 was submitted to DEC on March 9, 2005 and approved with minor comments on March 23, 2005. Fieldwork was completed in April 2005. A Supplemental RI report was received on April 21, 2006 and comments were issued on July 25, 2006. A draft RAWP was received on May 1, 2006 and comments were issued on August 3, 2006. The remedial investigation was completed and a final Comprehensive Remedial Investigation Report was issued to the Department on July 23, 2007. A preliminary final RAWP was received by the Department on August 28, 2007 and a 30-day public comment period for the RAWP began on August 29, 2007 and ended on September 29, 2007. No substantive comments received. The RAWP was approved on November 27, 2007. The remedy includes hot spot removal of soil and capping with institutional controls.

Env Problem: Port Ivory Site 1 consists largely of historic fill, and is consistent with the urbanized and industrial nature of the former Proctor & Gamble Site, consisting of production by-products (calcium carbonate, spent diatomaceous filter earth, and spent carbonaceous filter material); and contamination of both soil and groundwater, in varying degrees throughout the Site, with volatile organic compounds (VOCs), several semi-volatile organic compounds (SVOCs), metals, petroleum and non-petroleum oils.

Health Problem: Remedial activities are complete and measures are in place to control

Site Description:

Location: The Howland Hook Marine Terminal (HHMT) - Port Ivory Facility is located at 40 Western Avenue, Staten Island, Richmond County, New York. Port Ivory Site #2 consists of 28.6 acres of the 123.75-acre HHMT-Port Ivory Facility. Western Avenue transects the site, with Area 2A situated to the west and Area 2B to the east of this public road. The HHMT - Port Ivory Facility is bordered by Bridge Creek to the west, the Arthur Kill to the north, wetlands and undeveloped land to the east, and railroad tracks to the south. Site Features: The Site consists of Area 2A (23.94 acres) and Area 2B (4.66 acres) encompassing 28.6 acres of the 123.75-acre HHMT - Port Ivory Facility. Area 2A and Area 2B are non-contiguous areas of land transected by Western Avenue, which extends in a north-south direction and separates Block 1400, Lot 1 from Block 1338, Lot 1. Area 2A, which is located to the west of Western Avenue, is bordered by Richmond Terrace to the north, Western Avenue to the east, Bridge Creek to the south and southwest, and Site 1 to the west. Vehicular access to the northern portion of Area 2A is provided from Richmond Terrace, while access to the southern portion of Area 2A is provided from Western Avenue. Building No. 41, Building No. 45, and a modular building situated in the footprint of former Building No. 40 are the only remaining structures currently in Area 2A. Otherwise, no improvements other than parking areas and railroad spurs are present in Area 2A. Area 2A is generally flat and is paved with asphalt or concrete except for landscaped/vegetated areas that are enclosed within the HHMT - Port Ivory fence line. Area 2A is used for the storage and transportation of containers, except that the remaining buildings are used for office space. Area 2B, which is east of Western Avenue and is bordered by Site 3 (Area 3A) to the north, a marsh to the east, an unnamed tributary of Bridge Creek to the south, and Western Avenue to the west. Vehicular access to Area 2B is provided by an access road from Western Avenue and from a paved

roadway extending south from Site 3 (Area 3A). The improvements in Area 2B consist of an access drive and railroad spurs. Area 2B is generally flat and, except for landscaped/vegetated areas, is either paved with asphalt or covered with crushed stone. The unnamed tributary to Bridge Creek is tidally influenced and the vegetated land immediately adjacent to the stream is tidal wetlands. Two tidally-influenced drainage ditches are present in Area 2B; although not regulated wetlands, these ditches also have associated 150-foot buffer zones. Current Zoning/Uses(s): The site is currently zoned industrial. The surrounding land uses are primarily industrial, light industrial and undeveloped marsh areas contaminated from historical activities not related to the site. Residences are located east of the site about one-third mile away. The Port Authority utilizes the Site as an intermodal facility. With regard to the HHMT - Port Ivory Facility, an intermodal facility is defined as a facility where cargo transported by ship is transferred to rail or truck for transport to intermediate or final destinations. Past Use of the Site: The Port Authority purchased the HHMT - Port Ivory Facility from P&G in 2000. P&G used the Facility for the manufacture, warehousing, and distribution of edible oils, baking mixes, orange juice, and other foodstuffs; manufacture, warehousing, and distribution of soaps and cleaning products; and, burning of wood chips for fuel. In addition, numerous easements were established by various energy companies for underground pipelines that conveyed petroleum products. Operations at the HHMT - Port Ivory Facility began in or about 1908 and continued through approximately 1990. Site 2 was developed in 1906-1907 based on information provided by P&G. Specifically, Area 2A was the location of the manufacturing buildings, the boilers, the rail yard, locomotive maintenance buildings, raw product manufacturing/storage, and other activities associated with the processing, packaging, and storage of products from the early 1900s to the closure of activities. Approximately 32 buildings were located in Area 2A. Numerous railroad spurs extended approximately north-south through portions of Area 2A. The following materials were stored in ASTs located in Area 2A: caustics, various vegetable and fish oils, fuel oil, waste oil, soap, spent acids, spent nickel catalyst, grease, coke, hydrogen, and rosin. USTs were encountered in four areas in Area 2A. The UST contents included petroleum oils, ethanol, and enzymes. Area 2B consisted primarily of railways. The southernmost portions of Buildings Nos. 70-75 were located in Area 2B and were used in process operations performed by the Citrus Hill and Duncan Hines divisions of P&G. No ASTs or USTs were reportedly located in Area 2B. Additional details regarding former land use and operational history at the site are provided in the CRIR. Site Geology and Hydrogeology: Overburden materials at the site, as well as at the remainder of the HHMT - Port Ivory Facility, include a complex of stratified drift, glacial till, tidal marsh deposits, and anthropogenic fill. Based on the results of the investigations, the following strata have been encountered (strata are listed from the land surface downwards): (1) fill consisting of sand, silt, clay, and gravel in a generally loose condition mixed with carbonaceous material and/or vegetative, wood, brick, concrete, and glass debris that is present throughout Site 2 with a maximum thickness of about 19.5 feet; (2) meadow mat substratum consisting of organic clays and peat comprised of tidal marsh deposits, to a maximum thickness of approximately 27 feet; (3) sand deposits consisting of loose to medium dense sand from marine or glacio-fluvial deposits ranging in

U001841610

thickness from 5 to 16 feet; (4) glacial clay and silt deposits with lenses of sand and gravel ranging in thickness from less than 10 to approximately 60 feet; and, (5) weathered shale. The unconsolidated materials at Site 2 are consistent with documented regional conditions. The general hydrogeologic regime in overburden saturated zones consists of two components: an upper water bearing zone (WBZ), comprised of unconsolidated materials (indigenous granular soils, operational by-product fill, and/or non-indigenous fill materials) and a deeper WBZ comprised of native glacio-fluvial sediments (i.e., gravel, sand, silt and clay). A discontinuous meadowmat (i.e., peat) layer, the top of which occurs at approximately 6 to 25 feet below the ground surface (bgs), separates these WBZs. The meadowmat layer was encountered in the majority of the soil borings installed at Site 2. In the shallow water bearing zone groundwater at Area 2A is believed to flow towards and discharge into Bridge Creek and the Arthur Kill. At Area 2B, groundwater in the shallow water bearing zone is anticipated to flow towards and discharge into Bridge Creek and the unnamed tributary to Bridge Creek. Shallow groundwater elevations at Area 2A range from approximately four to 10.32 feet above mean sea level (AMSL) and range from approximately 4.5 to 5.24 feet AMSL at Area 2B.

Env Problem: Port Ivory Site 2 contamination is present in on-site soils, which consist largely of historic fill. Fill material is consistent with the urbanized and industrial nature of Site, containing primarily vegetative debris and cinders, but includes production by-products (calcium carbonate, spent diatomaceous filter earth, and spent carbonaceous filter material). Contaminants present in soil include the volatile organic compound (VOC) xylene, several semi-volatile organic compounds (SVOCs), predominantly PAH compounds, metals, petroleum and non-petroleum oils. Minor levels of contaminants in the groundwater include vinyl chloride, bis(2-ethylhexyl)phthalate and metals.

Health Problem: Remedial activities are complete and measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site.

Richmond County, NY. This 124-acre property is a former manufacturing facility for Proctor and Gamble (P&G) who operated from the early 1900's until 1991. The site contained numerous buildings used for the manufacture of consumer products including soap, detergent and foods. The Port Authority purchased the site from P&G in 2000. The Port Authority's planned use for this site includes an intermodal facility and container terminal for loading and unloading shipping cargo. The Port Authority entered the voluntary cleanup program for three areas within the Port Ivory facility, designated as sites V00615, V00674 and V00675 (refer to these site numbers for specific information on these sites). The Voluntary Cleanup agreement was signed on July 13, 2004. A fourth parcel (38.86 acres) north of, and contiguous with, the above Sites, was appended to Site 3 through a VCA amendment dated January 4, 2007. Site # V00615 consists of 13.87 acres (of the overall 124 acre property) and is referred to as Port Ivory Site 1. The NYSDEC has reviewed and issued comments (12/15/04) on the September 2004 Site Investigation/Remedial Action Work Plan. The Port Authority was asked to separate the SI and the RA work plans. A revised Draft Site Investigation work plan for Sites 1 and 2 was submitted to DEC on March 9, 2005 and approved with minor comments on March 23, 2005. Fieldwork was completed in April 2005. A Supplemental RI report was received on April 21, 2006 and comments were issued on July 25, 2006. A draft RAWP was received on May 1, 2006 and comments were issued on August 3, 2006. The remedial investigation was completed and a final Comprehensive Remedial Investigation Report was issued to the Department on July 23, 2007. A preliminary final RAWP was received by the Department on August 28, 2007 and a 30-day public comment period for the RAWP began on August 29, 2007 and ended on September 29, 2007. No substantive comments received. The RAWP was approved on November 27, 2007. The remedy includes hot spot removal of soil and capping with institutional controls.

Env Problem: Port Ivory Site 1 consists largely of historic fill, and is consistent with the urbanized and industrial nature of the former Proctor & Gamble Site, consisting of production by-products (calcium carbonate, spent diatomaceous filter earth, and spent carbonaceous filter material); and contamination of both soil and groundwater, in varying degrees throughout the Site, with volatile organic compounds (VOCs), several semi-volatile organic compounds (SVOCs), metals, petroleum and non-petroleum oils.

Health Problem: Remedial activities are complete and measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site.

Site Code: 58669

Site Description: Location: The Howland Hook Marine Terminal (HHMT) - Port Ivory Facility is located at 40 Western Avenue, Staten Island, Richmond County, New York. Port Ivory Site #2 consists of 28.6 acres of the 123.75-acre HHMT-Port Ivory Facility. Western Avenue transects the site, with Area 2A situated to the west and Area 2B to the east of this public road. The HHMT - Port Ivory Facility is bordered by Bridge Creek to the west, the Arthur Kill to the north, wetlands and undeveloped land to the east, and railroad tracks to the south. Site Features: The Site consists of Area 2A (23.94 acres) and Area 2B (4.66 acres) encompassing 28.6 acres of the 123.75-acre HHMT - Port Ivory Facility. Area 2A and Area 2B are non-contiguous areas of land transected by Western Avenue, which extends in a north-south direction and separates Block 1400, Lot 1 from Block 1338, Lot 1. Area 2A, which is located to the west of Western Avenue, is bordered by Richmond Terrace to the north, Western Avenue to the east, Bridge Creek to the south and southwest, and Site 1 to the west. Vehicular access to the northern portion of Area 2A is provided from Richmond Terrace, while access to the southern portion of Area 2A is provided from Western Avenue. Building No. 41, Building No. 45, and a modular building situated in the footprint of former Building No. 40 are the only remaining structures currently in Area 2A. Otherwise, no improvements other than parking areas and railroad spurs are present in Area 2A. Area 2A is generally flat and is paved with asphalt or concrete except for landscaped/vegetated areas that are enclosed within the HHMT - Port Ivory fence line. Area 2A is used for the storage and transportation of containers, except that the remaining buildings are used for office space. Area 2B, which is east of Western Avenue and is bordered by Site 3 (Area 3A) to the north, a marsh to the east, an unnamed tributary of Bridge Creek to the south, and Western Avenue to the west. Vehicular access to Area 2B is provided by an access road from Western Avenue and from a paved roadway extending south from Site 3 (Area 3A). The improvements in

U001841610

Area 2B consist of an access drive and railroad spurs. Area 2B is generally flat and, except for landscaped/vegetated areas, is either paved with asphalt or covered with crushed stone. The unnamed tributary to Bridge Creek is tidally influenced and the vegetated land immediately adjacent to the stream is tidal wetlands. Two tidally-influenced drainage ditches are present in Area 2B; although not regulated wetlands, these ditches also have associated 150-foot buffer zones. Current Zoning/Uses(s): The site is currently zoned industrial. The surrounding land uses are primarily industrial, light industrial and undeveloped marsh areas contaminated from historical activities not related to the site. Residences are located east of the site about one-third mile away. The Port Authority utilizes the Site as an intermodal facility. With regard to the HHMT - Port Ivory Facility, an intermodal facility is defined as a facility where cargo transported by ship is transferred to rail or truck for transport to intermediate or final destinations. Past Use of the Site: The Port Authority purchased the HHMT - Port Ivory Facility from P&G in 2000. P&G used the Facility for the manufacture, warehousing, and distribution of edible oils, baking mixes, orange juice, and other foodstuffs; manufacture, warehousing, and distribution of soaps and cleaning products; and, burning of wood chips for fuel. In addition, numerous easements were established by various energy companies for underground pipelines that conveyed petroleum products. Operations at the HHMT - Port Ivory Facility began in or about 1908 and continued through approximately 1990. Site 2 was developed in 1906-1907 based on information provided by P&G. Specifically, Area 2A was the location of the manufacturing buildings, the boilers, the rail yard, locomotive maintenance buildings, raw product manufacturing/storage, and other activities associated with the processing, packaging, and storage of products from the early 1900s to the closure of activities. Approximately 32 buildings were located in Area 2A. Numerous railroad spurs extended approximately north-south through portions of Area 2A. The following materials were stored in ASTs located in Area 2A: caustics, various vegetable and fish oils, fuel oil, waste oil, soap, spent acids, spent nickel catalyst, grease, coke, hydrogen, and rosin. USTs were encountered in four areas in Area 2A. The UST contents included petroleum oils, ethanol, and enzymes. Area 2B consisted primarily of railways. The southernmost portions of Buildings Nos. 70-75 were located in Area 2B and were used in process operations performed by the Citrus Hill and Duncan Hines divisions of P&G. No ASTs or USTs were reportedly located in Area 2B. Additional details regarding former land use and operational history at the site are provided in the CRIR. Site Geology and Hydrogeology: Overburden materials at the site, as well as at the remainder of the HHMT - Port Ivory Facility, include a complex of stratified drift, glacial till, tidal marsh deposits, and anthropogenic fill. Based on the results of the investigations, the following strata have been encountered (strata are listed from the land surface downwards): (1) fill consisting of sand, silt, clay, and gravel in a generally loose condition mixed with carbonaceous material and/or vegetative, wood, brick, concrete, and glass debris that is present throughout Site 2 with a maximum thickness of about 19.5 feet; (2) meadow mat substratum consisting of organic clays and peat comprised of tidal marsh deposits, to a maximum thickness of approximately 27 feet; (3) sand deposits consisting of loose to medium dense sand from marine or glacio-fluvial deposits ranging in thickness from 5 to 16 feet; (4) glacial clay and silt deposits with

lenses of sand and gravel ranging in thickness from less than 10 to approximately 60 feet; and, (5) weathered shale. The unconsolidated materials at Site 2 are consistent with documented regional conditions. The general hydrogeologic regime in overburden saturated zones consists of two components: an upper water bearing zone (WBZ), comprised of unconsolidated materials (indigenous granular soils, operational by-product fill, and/or non-indigenous fill materials) and a deeper WBZ comprised of native glacio-fluvial sediments (i.e., gravel, sand, silt and clay). A discontinuous meadowmat (i.e., peat) layer, the top of which occurs at approximately 6 to 25 feet below the ground surface (bgs), separates these WBZs. The meadowmat layer was encountered in the majority of the soil borings installed at Site 2. In the shallow water bearing zone groundwater at Area 2A is believed to flow towards and discharge into Bridge Creek and the Arthur Kill. At Area 2B, groundwater in the shallow water bearing zone is anticipated to flow towards and discharge into Bridge Creek and the unnamed tributary to Bridge Creek. Shallow groundwater elevations at Area 2A range from approximately four to 10.32 feet above mean sea level (AMSL) and range from approximately 4.5 to 5.24 feet AMSL at Area 2B.

Env Problem: Port Ivory Site 2 contamination is present in on-site soils, which consist largely of historic fill. Fill material is consistent with the urbanized and industrial nature of Site, containing primarily vegetative debris and cinders, but includes production by-products (calcium carbonate, spent diatomaceous filter earth, and spent carbonaceous filter material). Contaminants present in soil include the volatile organic compound (VOC) xylene, several semi-volatile organic compounds (SVOCs), predominantly PAH compounds, metals, petroleum and non-petroleum oils. Minor levels of contaminants in the groundwater include vinyl chloride, bis(2-ethylhexyl)phthalate and metals.

Health Problem: Remedial activities are complete and measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site.

Site Description: Location: The Howland Hook Marine Terminal (HHMT) - Port Ivory Facility is located at 40 Western Avenue, Staten Island, Richmond County, New York. Port Ivory Site #2 consists of 28.6 acres of the 123.75-acre HHMT-Port Ivory Facility. Western Avenue transects the site, with Area 2A situated to the west and Area 2B to the east of

this public road. The HHMT - Port Ivory Facility is bordered by Bridge Creek to the west, the Arthur Kill to the north, wetlands and undeveloped land to the east, and railroad tracks to the south. Site Features: The Site consists of Area 2A (23.94 acres) and Area 2B (4.66 acres) encompassing 28.6 acres of the 123.75-acre HHMT - Port Ivory Facility. Area 2A and Area 2B are non-contiguous areas of land transected by Western Avenue, which extends in a north-south direction and separates Block 1400, Lot 1 from Block 1338, Lot 1. Area 2A, which is located to the west of Western Avenue, is bordered by Richmond Terrace to the north, Western Avenue to the east, Bridge Creek to the south and southwest, and Site 1 to the west. Vehicular access to the northern portion of Area 2A is provided from Richmond Terrace, while access to the southern portion of Area 2A is provided from Western Avenue. Building No. 41, Building No. 45, and a modular building situated in the footprint of former Building No. 40 are the only remaining structures currently in Area 2A. Otherwise, no improvements other than parking areas and railroad spurs are present in Area 2A. Area 2A is generally flat and is paved with asphalt or concrete except for landscaped/vegetated areas that are enclosed within the HHMT - Port Ivory fence line. Area 2A is used for the storage and transportation of containers, except that the remaining buildings are used for office space. Area 2B, which is east of Western Avenue and is bordered by Site 3 (Area 3A) to the north, a marsh to the east, an unnamed tributary of Bridge Creek to the south, and Western Avenue to the west. Vehicular access to Area 2B is provided by an access road from Western Avenue and from a paved roadway extending south from Site 3 (Area 3A). The improvements in Area 2B consist of an access drive and railroad spurs. Area 2B is generally flat and, except for landscaped/vegetated areas, is either paved with asphalt or covered with crushed stone. The unnamed tributary to Bridge Creek is tidally influenced and the vegetated land immediately adjacent to the stream is tidal wetlands. Two tidally-influenced drainage ditches are present in Area 2B; although not regulated wetlands, these ditches also have associated 150-foot buffer zones. Current Zoning/Uses(s): The site is currently zoned industrial. The surrounding land uses are primarily industrial, light industrial and undeveloped marsh areas contaminated from historical activities not related to the site. Residences are located east of the site about one-third mile away. The Port Authority utilizes the Site as an intermodal facility. With regard to the HHMT - Port Ivory Facility, an intermodal facility is defined as a facility where cargo transported by ship is transferred to rail or truck for transport to intermediate or final destinations. Past Use of the Site: The Port Authority purchased the HHMT - Port Ivory Facility from P&G in 2000. P&G used the Facility for the manufacture, warehousing, and distribution of edible oils, baking mixes, orange juice, and other foodstuffs; manufacture, warehousing, and distribution of soaps and cleaning products; and, burning of wood chips for fuel. In addition, numerous easements were established by various energy companies for underground pipelines that conveyed petroleum products. Operations at the HHMT - Port Ivory Facility began in or about 1908 and continued through approximately 1990. Site 2 was developed in 1906-1907 based on information provided by P&G. Specifically, Area 2A was the location of the manufacturing buildings, the boilers, the rail yard, locomotive maintenance buildings, raw product manufacturing/storage, and other activities associated with the processing, packaging, and storage of products from the early 1900s to the closure of

U001841610

activities. Approximately 32 buildings were located in Area 2A. Numerous railroad spurs extended approximately north-south through portions of Area 2A. The following materials were stored in ASTs located in Area 2A: caustics, various vegetable and fish oils, fuel oil, waste oil, soap, spent acids, spent nickel catalyst, grease, coke, hydrogen, and rosin. USTs were encountered in four areas in Area 2A. The UST contents included petroleum oils, ethanol, and enzymes. Area 2B consisted primarily of railways. The southernmost portions of Buildings Nos. 70-75 were located in Area 2B and were used in process operations performed by the Citrus Hill and Duncan Hines divisions of P&G. No ASTs or USTs were reportedly located in Area 2B. Additional details regarding former land use and operational history at the site are provided in the CRIR. Site Geology and Hydrogeology: Overburden materials at the site, as well as at the remainder of the HHMT - Port Ivory Facility, include a complex of stratified drift, glacial till, tidal marsh deposits, and anthropogenic fill. Based on the results of the investigations, the following strata have been encountered (strata are listed from the land surface downwards): (1) fill consisting of sand, silt, clay, and gravel in a generally loose condition mixed with carbonaceous material and/or vegetative, wood, brick, concrete, and glass debris that is present throughout Site 2 with a maximum thickness of about 19.5 feet; (2) meadow mat substratum consisting of organic clays and peat comprised of tidal marsh deposits, to a maximum thickness of approximately 27 feet; (3) sand deposits consisting of loose to medium dense sand from marine or glacio-fluvial deposits ranging in thickness from 5 to 16 feet; (4) glacial clay and silt deposits with lenses of sand and gravel ranging in thickness from less than 10 to approximately 60 feet; and, (5) weathered shale. The unconsolidated materials at Site 2 are consistent with documented regional conditions. The general hydrogeologic regime in overburden saturated zones consists of two components: an upper water bearing zone (WBZ), comprised of unconsolidated materials (indigenous granular soils, operational by-product fill, and/or non-indigenous fill materials) and a deeper WBZ comprised of native glacio-fluvial sediments (i.e., gravel, sand, silt and clay). A discontinuous meadowmat (i.e., peat) layer, the top of which occurs at approximately 6 to 25 feet below the ground surface (bgs), separates these WBZs. The meadowmat layer was encountered in the majority of the soil borings installed at Site 2. In the shallow water bearing zone groundwater at Area 2A is believed to flow towards and discharge into Bridge Creek and the Arthur Kill. At Area 2B, groundwater in the shallow water bearing zone is anticipated to flow towards and discharge into Bridge Creek and the unnamed tributary to Bridge Creek. Shallow groundwater elevations at Area 2A range from approximately four to 10.32 feet above mean sea level (AMSL) and range from approximately 4.5 to 5.24 feet AMSL at Area 2B.

Env Problem: Port Ivory Site 2 contamination is present in on-site soils, which consist largely of historic fill. Fill material is consistent with the urbanized and industrial nature of Site, containing primarily vegetative debris and cinders, but includes production by-products (calcium carbonate, spent diatomaceous filter earth, and spent carbonaceous filter material). Contaminants present in soil include the volatile organic compound (VOC) xylene, several semi-volatile organic compounds (SVOCs), predominantly PAH compounds, metals, petroleum and non-petroleum oils. Minor levels of contaminants in the groundwater include vinyl chloride, bis(2-ethylhexyl)phthalate and

Site Description: The Port Authority of New York and New Jersey (Port Authority) is the current owner of the Howland Hook Marine Terminal - Port Ivory Facility located at 40 Western Avenue, in northwestern Staten Island, Richmond County, NY. This 124-acre property is a former manufacturing facility for Proctor and Gamble (P&G) who operated from the early 1900's until 1991. The site contained numerous buildings used for the manufacture of consumer products including soap, detergent and foods. The Port Authority purchased the site from P&G in 2000. The Port Authority's planned use for this site includes an intermodal facility and container terminal for loading and unloading shipping cargo. The Port Authority entered the voluntary cleanup program for three areas within the Port Ivory facility, designated as sites V00615, V00674 and V00675 (refer to these site numbers for specific information on these sites). The Voluntary Cleanup agreement was signed on July 13, 2004. A fourth parcel (38.86 acres) north of, and contiguous with, the above Sites, was appended to Site 3 through a VCA amendment dated January 4, 2007. Site # V00615 consists of 13.87 acres (of the overall 124 acre property) and is referred to as Port Ivory Site 1. The NYSDEC has reviewed and issued comments (12/15/04) on the September 2004 Site Investigation/Remedial Action Work Plan. The Port Authority was asked to separate the SI and the RA work plans. A revised Draft Site Investigation work plan for Sites 1 and 2 was submitted to DEC on March 9, 2005 and approved with minor comments on March 23, 2005. Fieldwork was completed in April 2005. A Supplemental RI report was received on April 21, 2006 and comments were issued on July 25, 2006. A draft RAWP was received on May 1, 2006 and comments were issued on August 3, 2006. The remedial investigation was completed and a final Comprehensive Remedial Investigation Report was issued to the Department on July 23, 2007. A preliminary final RAWP was received by the Department on August 28, 2007 and a 30-day public comment period for the RAWP began on August 29, 2007 and ended on September 29, 2007. No substantive comments received. The RAWP was

approved on November 27, 2007. The remedy includes hot spot removal of soil and capping with institutional controls.

Env Problem: Port Ivory Site 1 consists largely of historic fill, and is consistent with the urbanized and industrial nature of the former Proctor & Gamble Site, consisting of production by-products (calcium carbonate, spent diatomaceous filter earth, and spent carbonaceous filter material); and contamination of both soil and groundwater, in varying degrees throughout the Site, with volatile organic compounds (VOCs), several semi-volatile organic compounds (SVOCs), metals, petroleum and non-petroleum oils.

Health Problem: Remedial activities are complete and measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site.

access to the northern portion of Area 2A is provided from Richmond Terrace, while access to the southern portion of Area 2A is provided from Western Avenue. Building No. 41, Building No. 45, and a modular building situated in the footprint of former Building No. 40 are the only remaining structures currently in Area 2A. Otherwise, no improvements other than parking areas and railroad spurs are present in Area 2A. Area 2A is generally flat and is paved with asphalt or concrete except for landscaped/vegetated areas that are enclosed within the HHMT - Port Ivory fence line. Area 2A is used for the storage and transportation of containers, except that the remaining buildings are used for office space. Area 2B, which is east of Western Avenue and is bordered by Site 3 (Area 3A) to the north, a marsh to the east, an unnamed tributary of Bridge Creek to the south, and Western Avenue to the west. Vehicular access to Area 2B is provided by an access road from Western Avenue and from a paved roadway extending south from Site 3 (Area 3A). The improvements in Area 2B consist of an access drive and railroad spurs. Area 2B is generally flat and, except for landscaped/vegetated areas, is either paved with asphalt or covered with crushed stone. The unnamed tributary to Bridge Creek is tidally influenced and the vegetated land immediately adjacent to the stream is tidal wetlands. Two tidally-influenced drainage ditches are present in Area 2B; although not regulated wetlands, these ditches also have associated 150-foot buffer zones. Current Zoning/Uses(s): The site is currently zoned industrial. The surrounding land uses are primarily industrial, light industrial and undeveloped marsh areas contaminated from historical activities not related to the site. Residences are located east of the site about one-third mile away. The Port Authority utilizes the Site as an intermodal facility. With regard to the HHMT - Port Ivory Facility, an intermodal facility is defined as a facility where cargo transported by ship is transferred to rail or truck for transport to intermediate or final destinations. Past Use of the Site: The Port Authority purchased the HHMT - Port Ivory Facility from P&G in 2000. P&G used the Facility for the manufacture, warehousing, and distribution of edible oils, baking mixes, orange juice, and other foodstuffs; manufacture, warehousing, and distribution of soaps and cleaning products; and, burning of wood chips for fuel. In addition, numerous easements were established by various energy companies for underground pipelines that conveyed petroleum products. Operations at the HHMT - Port Ivory Facility began in or about 1908 and continued through approximately 1990. Site 2 was developed in 1906-1907 based on information provided by P&G. Specifically, Area 2A was the location of the manufacturing buildings, the boilers, the rail yard, locomotive maintenance buildings, raw product manufacturing/storage, and other activities associated with the processing, packaging, and storage of products from the early 1900s to the closure of activities. Approximately 32 buildings were located in Area 2A. Numerous railroad spurs extended approximately north-south through portions of Area 2A. The following materials were stored in ASTs located in Area 2A: caustics, various vegetable and fish oils, fuel oil, waste oil, soap, spent acids, spent nickel catalyst, grease, coke, hydrogen, and rosin. USTs were encountered in four areas in Area 2A. The UST contents included petroleum oils, ethanol, and enzymes. Area 2B consisted primarily of railways. The southernmost portions of Buildings Nos. 70-75 were located in Area 2B and were used in process operations performed by the Citrus Hill and Duncan Hines divisions of P&G. No ASTs or USTs were reportedly located

in Area 2B. Additional details regarding former land use and operational history at the site are provided in the CRIR. Site Geology and Hydrogeology: Overburden materials at the site, as well as at the remainder of the HHMT - Port Ivory Facility, include a complex of stratified drift, glacial till, tidal marsh deposits, and anthropogenic fill. Based on the results of the investigations, the following strata have been encountered (strata are listed from the land surface downwards): (1) fill consisting of sand, silt, clay, and gravel in a generally loose condition mixed with carbonaceous material and/or vegetative, wood, brick, concrete, and glass debris that is present throughout Site 2 with a maximum thickness of about 19.5 feet; (2) meadow mat substratum consisting of organic clays and peat comprised of tidal marsh deposits, to a maximum thickness of approximately 27 feet; (3) sand deposits consisting of loose to medium dense sand from marine or glacio-fluvial deposits ranging in thickness from 5 to 16 feet; (4) glacial clay and silt deposits with lenses of sand and gravel ranging in thickness from less than 10 to approximately 60 feet; and, (5) weathered shale. The unconsolidated materials at Site 2 are consistent with documented regional conditions. The general hydrogeologic regime in overburden saturated zones consists of two components: an upper water bearing zone (WBZ), comprised of unconsolidated materials (indigenous granular soils, operational by-product fill, and/or non-indigenous fill materials) and a deeper WBZ comprised of native glacio-fluvial sediments (i.e., gravel, sand, silt and clay). A discontinuous meadowmat (i.e., peat) layer, the top of which occurs at approximately 6 to 25 feet below the ground surface (bgs), separates these WBZs. The meadowmat layer was encountered in the majority of the soil borings installed at Site 2. In the shallow water bearing zone groundwater at Area 2A is believed to flow towards and discharge into Bridge Creek and the Arthur Kill. At Area 2B, groundwater in the shallow water bearing zone is anticipated to flow towards and discharge into Bridge Creek and the unnamed tributary to Bridge Creek. Shallow groundwater elevations at Area 2A range from approximately four to 10.32 feet above mean sea level (AMSL) and range from approximately 4.5 to 5.24 feet AMSL at Area 2B.

Env Problem: Port Ivory Site 2 contamination is present in on-site soils, which consist largely of historic fill. Fill material is consistent with the urbanized and industrial nature of Site, containing primarily vegetative debris and cinders, but includes production by-products (calcium carbonate, spent diatomaceous filter earth, and spent carbonaceous filter material). Contaminants present in soil include the volatile organic compound (VOC) xylene, several semi-volatile organic compounds (SVOCs), predominantly PAH compounds, metals, petroleum and non-petroleum oils. Minor levels of contaminants in the groundwater include vinyl chloride, bis(2-ethylhexyl)phthalate and metals.

Health Problem: Remedial activities are complete and measures are in place to control the potential for coming in contact with subsurface soil and groundwater contamination remaining on the site.

Site Description: Location: The Howland Hook Marine Terminal (HHMT), Port Ivory Site 3, is located at 40 Western Avenue in Staten Island, Richmond County. The HHMT Site 3 facility consists of Area 3A (41.3 acres) and area 3B (38.9 acres). Areas 3A and 3B are non-contiguous areas of land transected by Richmond Terrace. Area 3A is bordered by Richmond Terrace to the north, undeveloped wooded land to the east, HHMT Site 2 (which is subject to a separate Voluntary Cleanup Agreement) to the south and Western Avenue to the west. Area 3B is bordered by the Arthur Kill to the north, northeast and northwest; marsh areas and vacant land to the east; Richmond Terrace and an extension of Richmond Terrace to the south; and marsh areas at the confluence of Bridge Creek and the Arthur Kill to the west. No residential properties are located within one-third of a mile of the Site. Site Features: Site 3, which is fenced, includes the central and northern portions of Block 1338, Lot 1 (Area 3A) and Block 1309, Lot 10 (Area 3B). Area 3A is generally flat and consists of gravel, paved or vegetated land, and several buildings. Buildings 74/75, 60, 64 through 68, 79 and 80 are the only remaining structures. Building Nos. 74/75 is currently leased by the New York Container Terminal and is used for storage of shipping containers. The 60 series buildings and buildings 79 and 80 are vacant. It is anticipated that all buildings, except for Building Nos. 74/75, will be demolished for redevelopment. Asphalt-paved access roads, associated parking lots and railroad spurs surround the buildings. Wetlands are located east of Area 3A. Area 3B consists mainly of a closed construction and demolition (C&D) landfill and the southern portion is currently vacant. There are also piers and barge slips, a gravel parking area and a small guard shack. Area 3B is relatively flat and slopes downwards to the north, east, and west from the topographic high points near the central and southern portions of the site. It is also adjacent to Bridge Creek to the east and Arthur Kill to the north. Wetlands are present to the east and north of Area 3B. The Site is traversed by three abandoned pipelines and easements that formerly carried fuel oil and petroleum products, as shown in Figure 2. At Area 3A, the Tidewater pipeline runs in a north-south direction underneath buildings 74/75, 60 and 80. The Exxon-Mobil pipeline runs in an east-west direction along the southern boundary of Area 3B. The Colonial pipeline runs underneath the closed C&D landfill at Area 3B, in a northeast-southwest direction. Recently, Spectra installed an active pipeline and easement that runs within the Site boundary along Western Avenue. Current Zoning/Uses(s): The site is currently zoned industrial. The surrounding land uses are primarily industrial, light industrial and undeveloped marsh areas contaminated from historical activities not related to the site. Residences are located

east of the site about one-third mile away. The Port Authority plans to redevelop Area 3A for commercial use (an intermodal facility). No redevelopment is planned for Area 3B (the C&D landfill). Past Use of the Site: Proctor & Gamble operated the Site from 1906-1991. The Port Authority purchased the site in 2000 for the purpose of redevelopment. During Proctor & Gamble's ownership, the site was used for manufacturing consumer products such as soap, detergent, edible oils and foods. At Area 3A, operations consisted of manufacturing and processing soap, orange juice, cake mix and edible oils. The following materials were stored in above ground storage tanks (ASTs): caustics, vegetable and fish oils, fuel oil, waste oil, soap, spent acids, and vegetable grease. Underground storage tanks (USTs) were used at Area 3A and potentially stored petroleum oil. A truck depot and internal railroad system were used for loading and unloading edible oils at the central portion of Area 3A. Area 3B currently consists of a closed C&D landfill that operated from 1958 until 1989. The landfill was closed in the mid 1990's in accordance with applicable NYSDEC solid waste regulations. The landfill does not have a liner or leachate collection system, and wastes disposed included scrap metal, tires, telephone poles, railroad ties, vegetative debris and sharps, and carbonate fill. Post-closure groundwater and surface water monitoring continued from 2000 to 2008, after which it was satisfactorily demonstrated that the landfill was not a threat to the environment or public health. Annual inspection and maintenance of the landfill, under the oversight of the NYSDEC, continues to present day. Prior to the C&D landfill, Area 3B consisted of two 420,000 gallon fuel oil ASTs, concrete secondary containment, two pump houses, fly ash storage, and several railroad spurs. Activities included loading and unloading of barges at the piers; storage and transport of fuel oils in the ASTs; and storage of soap ash in two silos previously located near the piers. Operable Units: The site was divided into two operable units. OU1 covers the entire site and OU1A focuses only on the LNAPL recovery efforts at the site. An operable unit represents a portion of a remedial program for a site that for technical or administrative reasons can be addressed separately to investigate, eliminate or mitigate a release, threat of release or exposure pathway resulting from the site contamination. OU1 addresses Area 3A and Area 3B. OU1A addresses the on-site LNAPL source at certain locations within Areas 3A and 3B. Site Geology and Hydrogeology: The overburden materials at the site consist of fill material placed on tidal marsh or sand deposits, organic clays and peat, sand deposits, glacial clay and silt and weathered shale at approximately 60 feet below ground surface (bgs). Depth to groundwater in the overburden aquifer is about 3 to 11 feet bgs. In the southern and central portions of Area 3A, the hydraulic gradient is to the south, southwest, or west (i.e., towards Bridge Creek or its tributary). In the northern portion of Area 3A and at Area 3B, the hydraulic gradient is predominantly to the west, northwest, or north (i.e., towards Bridge Creek, the confluence of Bridge Creek and the Arthur Kill). In the extreme northeastern portion of Area 3A and in the eastern portion of Area 3B, the hydraulic gradient is east towards a marsh that is hydraulically connected to the Arthur Kill. Groundwater is not currently used for public water supply on Staten Island. There has been saline intrusion of aquifers in the area caused by former groundwater use not associated with site activities. VCA terminated, 8/10/17.

Env Problem:

Nature and Extent of Contamination OU1, SITE 3: Soil, groundwater, sediments and surface water were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Soil vapor and indoor air were analyzed for VOCs. Based upon investigations conducted to date, the primary contaminants of concern include VOCs (benzene, 2-Butanone and trichloroethene), PAHs and metals (arsenic, copper and lead). These contaminants are present in soil, groundwater, sub-slab vapor and indoor air. PCBs and pesticides did not exceed the commercial use SCOs and groundwater standards for any media. Soils - In Area 3A LNAPL was present at AOC - Central Area but VOCs in soil were below the Part 375 soil cleanup objectives (SCOs) for commercial use. Total PAHs were detected up to 1700 parts per million (ppm) from 1 to 1.5 feet below ground surface (bgs) [SCO is capped at 500 ppm]. Some metals are present in the fill material at concentrations above the commercial use SCOs. Arsenic ranged from 17 to 240 ppm, primarily at 2 to 6 feet bgs. Copper ranged from 410 to 2000 ppm, with the highest concentration at 4 to 4.5 feet bgs. Lead ranged from 1300 to 2400 ppm, at 0 to 5 feet bgs. The commercial SCOs for arsenic, copper and lead are 16 ppm, 270 ppm and 1,000 ppm, respectively. At Area 3B, LNAPL was present at AOC - Northern Area but VOCs did not exceed the commercial use SCOs in soil. There were some minor PAHs exceedances including benzo(a)pyrene at 11 ppm ppm (2-4 feet bgs) which has a commercial SCO of 1ppm. The maximum concentrations for metals were: arsenic, 110 ppm at 0 to 2 feet bgs and; lead, 6300 ppm at 2.5 to 4 feet bgs. See Figure 3 for Soil Contamination. Groundwater - Groundwater sampling results were compared to Ambient Water Quality Standards and Guidance Values (AWQSGVs) for Class GA groundwater. Based on the latest data results from Area 3A, the following VOCs exceeded the standards: naphthalene at 81 parts per billion (ppb) and methylene chloride (20 ppb). SVOCs exceedances were detected at areas near the former LNAPL locations. At Area 3B, these SVOCs (PAHs) exceeded the groundwater standard based on the latest sampling results: benzo(a)pyrene (1.3 ppb). The following VOC exceedances occurred: 2-Butanone (81 ppb) and benzene (1.3 ppb). The groundwater standards and guidance values for benzo(a)pyrene, 2-Butanone and benzene are non-detect (ND), 50 ppb, and 1 ppb, respectively. Vapor Intrusion - A soil vapor intrusion investigation was completed at AOC Central Area (Area 3A) due to the presence of LNAPL in soil and groundwater. The investigation included a sub-slab vapor and indoor air evaluation at Buildings 74/75 which was occupied by a tenant and used for storage. TCE was detected in the sub-slab at 910 g/m3 and 1.1 g/m3 in the indoor air. It was determined that neither additional indoor air quality assessment nor remedial efforts were warranted based on the current use of the building. Surface Water - Surface water sampling at Area 3B, which is adjacent to the Arthur Kill, was conducted from 1992 to 2012 as part of the annual construction and demolition (C&D) landfill monitoring. Upstream and downstream samples were collected from the Arthur Kill. Several metals were detected at concentrations above the AWQSGVs for class SD surface water in at least one sample since 1992. However, the presence of these metals may be naturally occurring or not attributable to site activities since these metals were not detected at concentrations above the groundwater standards at the site. VOCs, SVOCs, PCBs and pesticides samples did not exceed the surface water standards. In 2012, the NYSDEC approved the discontinuation of periodic surface water sampling at the C&D

landfill. At Area 3A, a small amount of surface water drainage is directed to the east or southeast toward a low-lying area offsite, which in turn drains into the unnamed tributary of Bridge Creek. Surface water impacts were not detected in the unnamed tributary of Bridge Creek. Wetland Sediments - In 2005, the Port Authority completed a wetlands delineation at Area 3B to: (1) determine the appropriate buffer zone for each wetlands area; (2) survey each wetlands area; and (3) identify suitable habitat for threatened or endangered species including essential fish habitat. The delineation identified wetlands, vegetative flats (i.e., vegetated areas that are completely inundated at high tide), and the wrack line (i.e., the water line during high tide). Wetlands along the eastern and western boundaries of Area 3B and the vegetative flats along the northern boundary of Area 3B are tidally influenced and have a 150 foot buffer zone. The isolated wetlands are freshwater and have a 100 foot buffer zone. Ten soil borings were completed at the edge of the wetlands adjacent to AOC Northern Area. Based on analytical results, VOCs, SVOCs, metals, PCBs and pesticides were all below the applicable commercial SCOs for the site. Based on these results, no remedial action was required for the wetlands area sediments.

Health Problem: Direct contact with contaminated soil is unlikely because the site is fenced, access is restricted and the majority of the site is covered by buildings, building foundations or pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not contaminated by this site. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Sampling has indicated that soil vapor intrusion does not represent a current exposure pathway given the use of the site. However, an additional soil vapor intrusion evaluation is recommended if the current use of the site changes. Sampling has indicated that soil vapor intrusion is not an off-site concern.

SHWS:

Name: CHARLTON CLEANERS
Address: 24 BARRETT AVENUE
City,State,Zip: STATEN ISLAND, NY 10301
Program: HW
Site Code: 58634
Classification: Significant threat to the public health or environment - action required.

Region: 2
Acres: 0.4
HW Code: 243019
Record Add: 11/18/1999
Record Upd: 12/06/2018
Updated By: JXGRECO

Site Description: Location: The Charlton Cleaners Site is located in an urban area at 24 Barrett Avenue, Staten Island, NY. Site Features: The site is included within an 18,300 square foot building that is situated at the eastern end of the Forest Avenue Shoppers Town Shopping Center. Other retail businesses are adjacent and nearby. A residential area is located down-gradient of the site. Current Zoning and Land Use: The site is currently an active retail store and is zoned for commercial use. The surrounding parcels are currently used for commercial and utility right of ways. The nearest residential properties are to the north across Barrett Avenue. Past Use of the Site: Until 1994 the building was occupied by a dry cleaning business called Charlton Cleaners along with other small retailers. The building has since been remodeled and is occupied by a craft supply retailer. Prior use as a dry cleaner has led to the site being contaminated. Site Geology and Hydrogeology: The topography of the site is generally level and slopes slightly to the south-southeast. The shallow soils beneath the site consist primarily of fine to medium sand with varying amounts of silt and gravel/cobble. Cobble was encountered between 5 and 20 ft bgs. Below the cobble, soils consist of a fine to coarse sand with trace silt and gravel. Water level measurements indicate the depth to groundwater to be approximately 6 ft below ground (bg), and the general groundwater flow direction is to the north and northeast.

Env Problem: Nature and Extent of Contamination: Soil and groundwater were analyzed for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals, polychlorinated biphenyls (PCBs), and pesticides. Based upon investigations conducted to date, the primary contaminants of concern are tetrachlorethene (PCE), and to a much

lesser degree, PCE s breakdown products (i.e. trichloroethene , cis 1,2 dichloroethene , vinyl chloride). These contaminants of concern are the same as the former Paul Miller Dry Cleaners site located immediately upgradient of the site and which contributes to the Charlton Cleaners groundwater contamination. Soil PCE, TCE and VC are found in soils from near the ground surface in the unsaturated zone to a depth of approximately 50 feet below the ground surface. Soil contamination in the unsaturated zone is limited to the area adjacent to the former Charlton Cleaners location. Maximum concentrations of PCE for soil sample collected above the groundwater table were 1,200 ug/kg. Maximum concentrations of PCE for soil samples collected beneath the groundwater table was 200 ug/kg. This indicates that the soil results were likely influenced by the high groundwater concentrations of PCE. Groundwater - TCE and its associated breakdown products are also found in groundwater across the site. The majority of the contaminant mass is in the 30- to 50-foot below the ground surface (BGS) interval. The greatest exceedances were reported west of the former Charlton Cleaners building and just north of Barrett Street. A second area north of Barret Street had a groundwater concentration reported at 26,000 ug/L indicating a possible source of DNAPL. The concentrations attenuate along the plume path moving with the groundwater toward the northeast. The groundwater contamination is limited laterally to a width of approximately 300 feet and is approximately 3,200 feet long. Soil Vapor & Indoor Air - PCE was detected in soil vapor at elevated concentrations and was also detected in one residential indoor air sample at a concentration of 60 micrograms per cubic meter. The resident was informed of the laboratory analytical results and offered a sub-slab depressurization system (SSDS) to mitigate the contamination. The owner (who resides at the address)declined the Department s offer. The NYSDOH has indicated no other SSDSs are warranted or needed at this time to address the soil and groundwater contamination. Significant Threat: This site has been determined a significant threat to human health and the environment and has been classified a class 2 hazardous waste site.

Health Problem:

Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. Measures have been taken to prevent soil vapor intrusion for occurring in the on-site structure thus minimizing the potential for exposure to on-site workers and shoppers. Off-site soil vapor sampling to the north west of the site has not identified the potential for soil vapor intrusion in to nearby structures. Access to conduct soil vapor intrusion sampling in an adjacent stripmall located immediately to the south/southeast of the site was denied by the property owner. Therefore, the potential exists for the inhalation of site contaminants due to soil vapor intrusion in the tenant spaces in this structure.

Site Description: Refer to Site No: 243019 for remedial information. The Volunteer entered a cash-out Order on Consent and NYS will implement the remedial program for this site. Location: The Charlton Cleaners Site is located in an urban area at 24 Barrett Avenue, Staten Island, NY. Site Features: The site features include several large retail buildings. The site is included within an 18,300 square foot building that is situated at the eastern end of the Forest Avenue Shoppers Town Shopping Center. Other retail businesses are adjacent and nearby. Current Zoning and Land Use: The site is currently an active retail store and is zoned for commercial use. The surrounding parcels are currently used for commercial and utility right of ways. The nearest residential properties are to the north across Barrett Avenue. Past Use of the Site: Until 1994 the building was occupied by a dry cleaning business called Charlton Cleaners along with other small retailers. The building has since been remodeled and is occupied by a craft supply retailer. Prior use as a dry cleaner has led to the site being contaminated. Site Geology and Hydrogeology: The topography of the site is generally level and slopes slightly to the south-southeast. The shallow sediments beneath the site consist primarily of fine to medium sand with varying amounts of silt and gravel/cobble. Cobble was encountered between 5 and 20 ft bg. Below the cobble sediments consist of a fine to coarse sand with trace silt and gravel. Water level measurement indicate the depth to groundwater to be approximately 6 ft bgs and the general groundwater flow direction is to the north and northeast.

Env Problem: Refer to Site No: 243019 for remedial information. The Volunteer entered a cash-out Order on Consent and NYS will implement the remedial program for this site. Nature and Extent of Contamination: Based upon investigations conducted to date, the primary contaminants of concern at the site known at this time are tetrachlorethene (PCE), and PCE s breakdown products (i.e. trichloroethene, vinyl chloride). Investigations indicate that contamination does not exist in unsaturated soil on site. Monitoring well data revealed a groundwater plume of PCE contamination under the former dry cleaners that extends north along the shopping center. The greatest concentration of tetrachloroethene are found just north of the former dry cleaner building in MW-6D at concentration of 12,000 ppb (SCO 0.2ppb). In addition, soil vapor beneath the site are also contaminated with PCE and its decay products. Significant Threat: This site has been determined a significant threat to human health and the environment and has been classified a class 2 hazardous waste site.

Health Problem: Direct contact with contaminants in the soil is unlikely because the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying

Classification: Significant threat to the public health or environment - action
required.
Region: 2
Acres: 0.39
HW Code: 243018
Record Add: 11/18/1999
Record Upd: 12/06/2018
Updated By: JXGRECO
Site Description:

Location: The Former Paul Miller Dry Cleaner Site is located at 1465 Forest Avenue, an urban portion of Richmond County, NY. The site occupies a 0.39 acre parcel in a commercial area along Forest Avenue approximately one-quarter mile southwest of Barrett Avenue. The entire investigation area is approximately 2.5 acres. Charlton Cleaners (V00252 and 243019), a different dry cleaning facility located at 24 Barrett Avenue, is located 350 feet northeast and down-gradient of the Paul Miller site. The Paul Miller and Charlton

plumes are commingled. Site Features: The site is relatively flat with a gentle slope to the north northwest(rear of the property) and consisting of three buildings. The former Paul Miller Dry Cleaning building has a slab on grade foundation in front and a basement under the rear portion. The remaining surface area of the site is covered with an asphalt parking lot. Current Zoning and Land Use: The site is zoned for commercial use. The Former Paul Miller building on-site is currently occupied by Boston Market Corporation and is used as a restaurant. The surrounding parcels are currently used for commercial purposes. The nearest residential area is approximately 300 ft. to the south across Forest Avenue and located upgradient of the site. Past Use of the Site and the Interim Remedial Measures: A review of historical documents indicated that the site was undeveloped prior to 1960. The Paul Miller facility was used as a dry cleaner from 1960 to 1995. The discharge of dry cleaning solvents to a dry well in the basement and the apparent dumping of the chemicals onto the ground surface are the suspected sources of the contamination. The releases have resulted in soil, soil vapor and groundwater contaminated with chlorinated solvents: primarily the volatile organic compound (VOC or CVOC) tetrachloroethene (also known as PCE) and trichloroethene (TCE) as well as the chemical breakdown products including and cis-1,2-dichloroethene (cis-1,2-DCE), and vinyl chloride (VC). VOCs in the soil and groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. Therefore, the Department evaluated the indoor of the Boston Market restaurant and identified that VOCs in the soil vapors entered the building through cracks and penetrations in the building floors. The Department sealed the penetrations and installed a sub-slab depressurization systems (SSDS) as an Interim Remedial Measure (IRM) to reduce the exposure to these VOCs. The SSDS is currently fully operational and will remain in place until the remedial actions are completed. Comingled Contamination: The Department has determined that as contamination from the Former Paul Miller site travelled with the natural movement of the groundwater toward the Charlton Cleaners site, the groundwater came into contact with the Charlton groundwater contamination plume and became commingled (mixed together). From the point where the two groundwater plumes became mixed, they were then indistinguishable. The Charlton Cleaners Volunteer was required to enter into an alternate agreement with the Department to remediate their site due to the discontinuation of the VCP program. The Department presented the RP with the option of a cash-out offer for their cleanup responsibility. The cash-out offer, as the name implies, is a legal mechanism for the RP to pay an agreed upon amount to the State, and in exchange, the Department is to perform the remedial work and provide relief for the liability related to the contamination. This cash-out offer is routine within the Department in instances when it is advantageous to the State to take on the responsibility of a cleanup. This agreement is memorialized in an Order on Consent (Consent Order or CO). The Department entered into negotiations and the responsible party agreed to terms that included a monetary payment and deed restrictions to the property (which are necessary for the Department to permanently control of use of groundwater). The Department also obtained access and use of the responsible party's property to implement the remedies at both the Paul Miller and Charlton Cleaners VCP sites. The Department and the responsible party entered into a Consent Order on XXXX, 2017 thereby dissolving the VCP

FORMER PAUL MILLER DRY CLEANERS (Continued)

S105586307

agreement and site #V00252. At the same time the Department consolidated the two sites under the Former Paul Miller Site (#243018). The Consent Order clearly states that the decision regarding the choice for the final remedy for Former Paul Miller site rests solely with the Department. A portion of this comingled groundwater contamination plume has moved off site and extends north beyond Barrett Avenue. The Department formed a separate site for this investigation area and assigned site number #243019 (Charlton Cleaners off site). The area downgradient of Barrett Avenue has been fully investigated by the Department. The RI/FS of the Charlton Off Site is not a subject of this PRAP: the findings and proposed remedy are subject of a separate RI/FS and PRAP. It should be noted that although these are separate sites the nature and distribution of the contamination lends itself to a sequential remedial method and approach where the most upgradient source area is addressed first. If downgradient areas were to be addressed first, then ongoing migration of source material would result in re-contamination of areas that had been cleaned up, and thereby leading to inefficient work flow and much more expensive remedies. Site Geology and Hydrogeology: The Site is underlain by the unconsolidated glacial till and outwash of the Harbor Hill Formation and is estimated to be 120-150 feet thick at the site. Borings and wells did not extend below a depth of 110 feet below the ground surface (bgs), so the total thickness was not confirmed. Three stratigraphic units that are characterized by general observations, although significant variation in thickness and texture were encountered. Fill - A layer of fill material up to 13 feet thick and made up of gravel, sand, organic material, and reworked glacial till makes up the shallow subsurface of the Site. Glacial Till - Underlying the fill, a glacial till unit extends to 30 to 40 ft bgs and is primarily made up of a reddish brown, stiff, clayey silt with varying amounts of sand and gravel throughout. The till was found to contain numerous, discontinuous lenses of sand. Additionally, based on the Department's experience and knowledge of the geology in the area, boulders are expected to be present throughout the till. This unit was subdivided further into an upper and lower till for the purposes of evaluating remedial technologies. Glacial Outwash - The glacial outwash unit underlies the glacial till and extends from 30 to 40 ft bgs to at least 110 ft bgs. This unit consists of grayish brown, loose, poorly sorted medium to coarse sand with some silt. The geology at the site identified during the remedial investigations indicated geologic deposits at the site are predominantly fine to medium sand, with silty sand lenses, clays and local deposits of coarse sand and gravel. The heterogeneity of the glacial overburden has created a very complex groundwater flow system. However, in general the shallow groundwater in the glacial till flows relatively slowly while the groundwater flow in the outwash travels relatively faster. Both the shallow groundwater and groundwater in the outwash systems move toward the north/northeast. Each flow toward the Kill Van Kull.

Env Problem:

Nature and Extent of Contamination: Based upon investigations to date, the primary contaminants of concern at the site include chlorinated solvents tetrachloroethene (PCE) and trichloroethene (TCE) along with their chemical breakdown products cis-1,2-DCE (DCE) and vinyl chloride (VC). Soil: The VOCs PCE, TCE and cis-1,2-DCE were detected in vadoze zone soil at the former Paul Miller facility at concentrations slightly exceeding the UUSCOs indicating an absence of a source area in soil that would be contributing to high

concentrations of these contaminants in groundwater nor do the concentrations indicate the presence of non-aqueous phase liquids (NAPL). Two other VOCs (acetone and methylene chloride) were detected in one sample slightly exceeding unrestricted use soil cleanup objectives (UUSCO), but were below lab reporting limits and may be lab contaminants. Some SVOCs, specifically some polycyclic aromatic hydrocarbons (PAHs), were detected in one soil sample at concentrations slightly exceeding their UUSCOs. No pesticides or PCBs were detected in the soil samples. Arsenic, nickel, chromium and copper slightly exceeded the UUSCO in a few soil samples. No other metals were detected at concentrations exceeding the UUSCOs in soil samples. The sparse occurrence of these low-level analytes across a well delineated site will not be the driver for the remediation of this site. Groundwater: Investigations indicate a chlorinated solvent plume in groundwater extends in a radial direction outward from the site but tends to flow predominantly with groundwater to the north-northwest in the shallower zones, while deeper groundwater flows to the north-northeast, consistent with regional groundwater flow. Chlorinated solvents: PCE, TCE, cis-1,2-DCE and VC are found in groundwater above NYS Groundwater Standards. These contaminants are found in groundwater from approximately 10 feet below ground surface (bgs) to a depth of 50 feet below the ground surface (bgs). Within this range the most highly contaminated groundwater resides in the water column at a depth of 35 ft. bgs to 45 ft. bgs. The highest detected concentration of PCE in groundwater was along the east side of the building at 3,500,000 parts per billion (ppb) in monitoring well MW-12S. The highest detected concentration of TCE, cis-1,2-DCE and VC were detected at monitoring well MW-11S on the east side of the building near monitoring well MW-12S at concentrations of 2,400 ppb, 11,000 ppb and 37 ppb, respectively. Metals: Chloride, iron, manganese, and nickel exceeded their groundwater standards in some samples. These metals are typical naturally-occurring metals and are not related to former site operations. Soil Vapor/Indoor Air: Initially in 2008, PCE and TCE were detected in an indoor air sample on the first floor of the on-site building at concentrations exceeding guidance values and at three to four orders of magnitude greater than the sub-slab concentrations. The indoor air results appeared to be anomalously high. Indoor air also showed the presence of vinyl chloride, cis-1,2-DCE, chloroform, and toluene at concentrations above background values. An indoor air and sub-slab sample were collected in the basement in 2008 and indicated PCE concentrations in the sub-slab at three orders of magnitude above that noted in indoor air. It was determined that soil vapor intrusion was occurring at the site and that there may be a contribution from contaminated building materials in the vicinity of the former location of the dry cleaning machine (current location of restrooms). First-floor subslab PCE concentrations ranged from 4,200 to 59,000 ug/m3, while first floor indoor air PCE concentrations ranged from 150 to 2,100 ug/m3. First floor sub-slab TCE concentrations ranged from 29 to 4,200 ug/m3, while first floor TCE concentrations ranged from 1.5 to 180 ug/m3. The mitigation of the indoor air concentrations is discussed later in this document. Off-site: Passive air quality sampling (sampling badges) was performed in March 2011 in and around the adjacent bank building (i.e., in the basement and the vicinity of the bank teller drive through). PCE was not detected in either sample. The adjacent fast food restaurant was not sampled in 2011 because the owner did not grant access. In 2013, indoor air

Health Problem: samples (Summa canisters) were collected at the adjacent bank building and adjacent fast food restaurant. Neither PCE nor TCE were detected in either sample. NEED THE 2014 RESULTS INCLUDED HERE. The NYSDOH has determined that monitoring will continue in the adjacent bank and no further action is required in the adjacent fast-food restaurant. Significant Threat The Former Paul Miller site presents a significant environmental threat due to the presence of dense-non-aqueous phase liquid (DNAPL) source material below the groundwater table which is acting as the contaminant source to the groundwater, soil vapor and indoor air. The Former Charlton Cleaners had previously been designated a Class 2 site separately.

Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the air of buildings, is referred to as soil vapor intrusion. Sampling identified impacts in the indoor air within the on-site building and a sub-slab depressurization system was installed to prevent vapors beneath the slab from entering the building. Monitoring for the potential for vapor intrusion at several off-site structures is on-going.

SHWS:

Name: R.BAKER & SON MACHINERY DISMANTLERS, INC
Address: 250 SOUTH WASHINGTON AVE. (AKA 250 GOETHALS RD N)
City,State,Zip: STATEN ISLAND, NY 10301
Program: HW
Site Code: 55932
Classification: Significant threat to the public health or environment - action required.

Region: 2
Acres: 3
HW Code: 243008
Record Add: 11/18/1999
Record Upd: 10/16/2018
Updated By: JXGRECO

Site Description: Location: The R. Baker and Son Machinery Dismantlers site, also referred to as 250 South Washington Avenue in site reports, is an industrial property used to store construction equipment located adjacent to and beneath the Goethals Bridge in the northwestern corner of Staten Island. The site is located at the extreme western end of South Washington Avenue, now known as Goethals Road North. The area is primarily light industrial properties such as trucking companies and the New York Container Terminal and is currently used as part of the construction of the new bridge. Nearby bodies of water include the tidal estuaries Old Place Creek (located approximately 450 feet south and west of the site) and the Arthur Kill (located approximately 1/3 mile to the northwest). Site Features: The site consists of approximately 3 acres of filled-in wetlands. Except for the access road to Goethals Road North, the site is bounded entirely by marshland and tidal creeks, including Old Place Creek. The site is home to several small warehouse buildings and trailers not intended for continuous occupancy. Current Zoning and Land Use: The site has been utilized as an industrial property used to store construction equipment since at least the 1970s. The property and surrounding area is zoned manufacturing, which allows manufacturing uses, most commercial uses and some community facility uses. Past Use of the Site: It is believed the site has been in use as an industrial property used to store construction equipment ever since it was reclaimed from the surrounding wetlands by filling. In the past, dismantling of obsolete electrical transformers has taken place at the site. The Department first inspected the property in 1977 and waste disposal reportedly dates back to 1972. Site Geology and Hydrology: The site is located in a filled in tidal wetland. Depth to groundwater ranges from 2 to 7 feet below ground surface at the site. Fill at the site is comprised of various sand, slit, clay, brick, and wood fragments. Groundwater flow is subject to tidal fluctuation but overall trends to the west.

Env Problem: Nature and extent of Contamination: Contamination of soil and groundwater with PCBs and evidence of off-site migration of the PCB to sediments in an adjacent wetlands area has been confirmed during the Remedial Investigation and prior investigations. Exceedances of standards, criteria, and guidance include PCBs for soil, sediment and groundwater. Soil - In shallow soil of up to 1 foot in depth, PCBs were found above the NYSDEC Industrial Soil Cleanup Objective (SCO)

of 25 ppm in an approximately 1/2 acre area in the southeast portion of the site, as well as a small area to the northwest. The maximum concentration of PCBs in shallow soil in both areas was approximately 25 ppm. Deeper soils in a small area in the southeast contain PCB at concentrations of up to 226 ppm at a depth of 17 feet. The deepest PCB contamination was 37 ppm at a depth of 25 feet. Those same small areas in the southeast and northwest also exceeded the Protection of Groundwater SCO of 1.8 ppm for 1,4 dichlorobenzene in shallow soils at concentrations up to 130 ppm. The area to the southeast also exceeded the SCO for 1,4 dichlorobenzene of 1.8 ppm with a concentration of 490 ppm. Groundwater - PCB contamination was found in one of the four monitoring wells. The impacted well is in the southeast portion of the site, near the area of soil contamination at depth. The maximum PCB concentrations in groundwater was 4.3 ppb, while the groundwater standard is 0.09 ppb. Turbidity in this well exceeded the prescribed level of 50 NTU in both rounds of groundwater sampling with turbidities of 248 NTU and 318 NTU. Groundwater contamination with various chlorobenzenes was found in a well on the northwestern portion of the site. 1,4 dichlorobenzene, with a groundwater standard of 3 ppb, was found at concentrations up to 490 ppb. Chlorobenzene, with groundwater standard of 5 ppb, was found at concentrations up to 98 ppb. 1,3 dichlorobenzene, with a groundwater standard of 3 ppb, was found at up to 75 ppb. Additionally, the well in the southeast portion of the site contained up to 9.7 ppb of chlorobenzene. Sediment - Concentrations of PCB were found in sediments from the tidal wetland surrounding the site. 13 of 23 sediment samples exceeded 1 ppm PCB but only 5 samples exceeded 5 ppm. The highest concentrations were found immediately adjacent to the backfilled portions of the site, with concentration dropping off quickly with increased distance. Maximum sediment concentrations were 36 ppm at the southwest limit of the backfill and 29 ppm at the southeast limit. Special Resources Impacted/Threatened: Fish and Wildlife Impact Analysis (FWIA) - A FWIA conducted at the site included a shellfish evaluation. Only one of eight shellfish samples contained PCB. This sample contained 0.173 ppm of PCB. The FDA safety level for PCB in shellfish is 2 ppm. Field observations identified characteristics of a healthy tidal marsh community, including the area with the highest reported PCB concentrations.

Health Problem:

Based on the location of the site in an industrial area and under the Goethals bridge, it is unlikely that unauthorized persons could enter the site and come in contact with contaminants present in the soil or in wetland sediments adjacent to the site. However, any bridge related maintenance/construction activities which include excavation would increase the potential for exposure to contaminants present in site soil and sediments. Exposure to site-related contaminants in groundwater is not a concern since the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds (VOCs) in the groundwater may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for exposure to VOCs through soil vapor intrusion for occupants of buildings constructed on or adjacent to this site. However, based on the location of the site under the Goethals bridge and planned construction for a replacement bridge, any future building construction near or at the site is unlikely.

Deeds Depth: 7.00
Comments: the 2014 soil permit application indicates re-use soils is included within the 20 feet thickness of stabilized material. "Other" described as permeable cover above when appropriate since it is described in the soil permit as stabilized sediment, sand bedding layer, perimeter collection sumps and steel oversheeting for the closed portion of the south cell. "Other" indicated in the soil permit applicati as permeable cover but described as carbon amended sand for the open portion of the south cell.

Comments: Permiabale cover and imperm. cover above has the following specific meanings: Soil Cap: a layer of sand, geosynthetic clay liner layer (GCL) and topsoil on top of GCL in Closed Cell. Solidified Sediment and Soils: Solidified to 10 to the negative 5th cm/sec permeability in the Closed Cell. Thickness is 17.45 ft in the center and 13.34 feet at perimeter in the closed cell. Subaqueous Cap: Composed of granular sand amended with organic carbon installed in the Open Cell. Sheet Pile Wall b/w cells

Der Deed Usage (si): Restricted
Deed Specific Requirement: Imperm. Cover
Deeds Parameter Desc: Arsenic
Deeds Depth: 7.00
Comments: Permiabale cover and imperm. cover above has the following specific meanings: Soil Cap: a layer of sand, geosynthetic clay liner layer (GCL) and topsoil on top of GCL in Closed Cell. Solidified Sediment and Soils: Solidified to 10 to the negative 5th cm/sec permeability in the Closed Cell. Thickness is 17.45 ft in the center and 13.34 feet at perimeter in the closed cell. Subaqueous Cap: Composed of granular sand amended with organic carbon installed in the Open Cell. Sheet Pile Wall b/w cells
