

Get live info on your accessible journey

**NaviLens
Accessible
Code®**

Wide-angled
reading up to 160°

Very fast
1/30 seconds to read

12x times farther
than QR & Barcodes

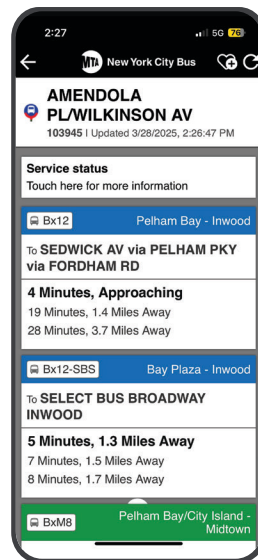

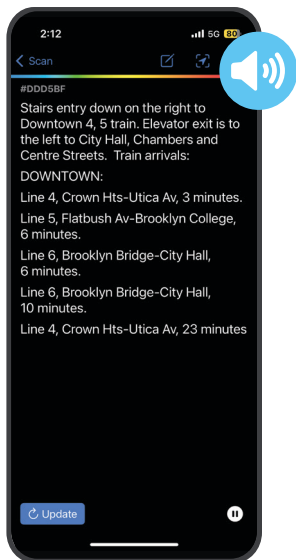

Reading in all
light conditions

Precision
& orientation

No focusing
required

NaviLens makes public transportation more accessible with **instant real-time service status, arrival info, and navigation assistance** for subways and buses on your smartphone.

The apps will automatically scan your surroundings for codes when open.

Codes can be scanned from up to 150 feet away at an angle of up to 160 degrees.

Use one of the NaviLens apps to scan codes throughout the MTA system.

Where can you find NaviLens codes?

We've installed over 5,000 NaviLens codes in subway stations and at bus stops.

Visit mta.info/navilens for all available stations and routes.

Which app should you use?

The **NaviLens** app provides **audio information** for riders who are blind or have low vision.

NaviLens GO provides **information and system wayfinding via text** on your phone's screen.

Both apps provide the same service info, arrival times, and navigation for subways and buses in your phone's default language.

37 languages are currently available, with more being added.
