### CONSTRUCTION AND ARCHAEOLOGY PHASING PLAN

The *Construction and Archaeology Phasing Plan* will outline, by construction contract, the order and type of the archaeological investigations. It will include all mapping/GIS data on the locations of known archaeologically sensitive areas, areas that contained archaeological resources or were sensitive for archaeological sites and have been cleared (only human remains will be assumed to be of value in “cleared” areas), archaeological sites that have been evaluated and found not to meet Historic Properties criteria, cemeteries, and Archaeological Properties (archeological resources that meet Historic Properties Criteria). The plan will correlate construction activities with the archaeological investigations that are necessary within the areas encompassed in each contract.

The *Construction and Archaeology Phasing Plan* will be developed once the construction contracts and schedule are further developed during preliminary engineering. The plan will be reviewed and amended (as appropriate) as each construction contract is awarded. \*
