Contract C42006 - Design-Build Services for the Replacement of the Coney Island Abutment Wall & St. Marks Bridge in the Borough of Brooklyn

Project Overview

The Work for Contract C-42006 includes design-build services for a new retaining wall system at Tracks B5 & B6 at Bent #500 located in Coney Island Yard/Avenue X Yard in the Borough of Brooklyn and replacement of the Saint Marks Ave. Viaduct Bridge (the "Bridge"), located between Saint Marks Avenue and Prospect Place (adjacent to 530 Saint Marks Avenue) in the Borough of Brooklyn, and the replacement of track, ties, and related track equipment.

Work for the Coney Island abutment wall will include the design and construction of a new retaining wall system, including supporting electrical, signals, traction power, track and environmental work. Work on the abutment wall will need to be coordinated with other projects occurring in the yard, such as the Sandy Repair and Resiliency work (Contract #C-34836). The current conditions of the abutment wall supporting Tracks B5 and B6 at Bent #500 is in very poor structural condition. Its deficiencies include horizontal, vertical, diagonal and spider cracks, the bearing section is severely deteriorated with missing and spalled concrete, and the girders and the girders' flanges are severely corroded with major section loss.
